TERMS OF BUSINESS, &c.

All orders from unknown Correspondents must be accompanied by a sufficient Remittance or Bankers' or other satisfactory References. To save cost and trouble of Booking, a Remittance should in all cases be sent with Orders under 10s. in value.

ACCOUNTS-DISCOUNTS.-All accounts are due net in three months; we however allow a discount of 5 %, i.e., 1s. in the pound, on all orders of 20s. and upwards, when accompanied by a remittance, or when paid within fourteen days of date of invoice.

ADDRESSES .- Full Name and Address should be sent with every communication, and nearest Railway Station should be stated with every order, as much time is thereby saved, especially in our busiest season, when we often receive from 1000 to 1500 letters daily. In consequence of this large correspondence, we suggest that, at all seasons, Cut Flower Orders and other Urgent Letters should be so marked on the envelope.

CARRIAGE ON GOODS.-We pay carriage on the following Articles to any address in the British Isles -

All KITCHEN GARDEN and FLOWER SEEDS offered in this Catalogue.

SEED POTATOES, CULINARY ROOTS, and HORTICULTURAL REQUISITES, if included on a general Garden Seed order of the value of 20s. in all.

DWARF and BUSH ROSES of the value of 7s. 6d. and upwards.

10s. 0d. ,. STANDARD ROSES ,,

15s. 0d.

We also pay carriage to any Station on the G.E.R. or Mid. & G.N Joint Line on:-

SEED POTATOES, CULINARY ROOTS, &c., to the value of 10s, and upwards

Owing to their heavy weight, in proportion to their value, we regret that we cannot pay carriage on the following -

ROSES of less value than the amounts mentioned above.

TREES AND SHRUIS But we continue to enclose extra plants, free of charge, to partially meet the cost of carriage.

HORTICULTURAL SUNDRIES, such as Silver Sand, Mats, Tools, &c., when ordered alone, and of less value than 20s Mushroom Spawn

CHANGE OF RESIDENCE .- We shall esteem it a favour it our customers, on changing their residences, will kindly favour us with their new addresses, so that we may be able to send them our Catalogues as usual

CHEQUES, MONEY ORDERS, AND POSTAL ORDERS.—Should be made payable to DANIELS Bros. LAMITED, and crossed BARCLAY & Co., LIMITED," Bankers, Norwich. Letters containing coin neast be registered according to Post Office regulations.

CO-OPERATION IN SENDING ORDERS.—Allotment holders, Cottagers, and members of Cottagers' Garden Societies, requiring individnally but small quantities of Seeds and Seed Potatoes, if they join together in sending their orders, will be allowed a special discount of ten per ceid... to be taken in seeds, besides the usual discount of five per cent. for cash, thus:- for every 20s. remitted, 23s. worth of seeds may be ordered. No order can be recognised under these terms unless over the net value of One Pound, and accompanied by prepayment in full. Each order will be packed separately and all can be consigned in one package, but full name and address of each enstonier ordering under this arrangement should be sent.

CORRESPONDENCE. Most Important.—Our customers having occasion to write to us respecting, any order previously sent by them, will much facilitate attention to their letters if they will kindly state the date on which the order was sent, and if remittance was enclosed name the amount; this will enable us more readily to identify their orders on reference to our Registers.

ORDER EARLY .- All orders are executed in the rotation in which they are received, and we would ask our customers to send us their orders as soon as possible after receiving this Catalogue. If every one waits for favourable weather, or until seeds are actually needed for sowing, it involves such a rush that an excessive strain is put upon our large staff of executants, and sometimes delay is as a consequence unavoidable.

PACKAGES.—All packages are charged at the lowest cost price, and are not returnable, undess sent back in good condition, and Carriage Paid, within fourteen days of receipt of goods. Costomers are particularly requested to put their name and address on each package, and to advise us by post when returned, or they cannot be credited.

All Fruit Trees, Roses, and Shrubs, will be so packed as to stand a journey of a week or ten days without injury. Should the packages arrive at their destination during a sevore frost, it will be advisable not to unpack them, but to keep them cool and moist out of the reach of frost.

PACKETS .- Will our customers kindly note that, in all cases where Seeds are quoted by the "Packet," this is the minumum quantity that we can supply; smaller quantities or half-packets are not sold by us.

RECOMMENDATIONS.—The many kind recommendations to new customers with which we have been favored in the past have been very gratifying. Should any of our customers have friends requiring Seeds, Plants, &c., to whom a copy of our Illustrated Guide would be acceptable, we shall feel much obliged by an intimation of the fact.

WARRANTY,-We believe that all Seeds, Bulbs and Roots sold by us are of the description and kind specified by us at the time of sale, but owing to the practical impossibility in many cases of being certain of this, we give no nudertaking that such Seeds, Bulbs, or Roots will correspond with the description under which they are sold, and we make all sales subject to this condition. We further give no warranty, express or implied, as to their growth, description, quality or productiveness, and will not be in any way responsible for the crop. If the Purchaser does not accept the goods sold to him, on these terms, they are at once to be returned to us

H.M. KING GEORGE V. & H.M. QUEEN ALEXANDRA

EXPORT OF SEEDS, PLANTS & TUBERS.

Important to Foreign and Colonial Correspondents.

REMITTANCES:—A remittance, or draft on a London Bank, should accompany all orders from unknown correspondents.

VEGETABLE & FLOWER SEEDS:—Special Collections of Vegetable and Flower Seeds for Export are offered as below. Where our customers, however, prefer to make their own selection of varieties from the body of the Catalogue an extra amount should be added to their remittance towards the cost of packing and postage. In the case of heavy seeds, such as Peas and Beans, the postage is an important item. All Vegetable and Flower Seeds can be supplied at any time or season.

PACKING OF PLANTS, TREES, Etc.:—All orders for these have special attention by our Export Packers, the plants being prepared and packed with the greatest care so as to ensure the best chances of successful transit, an important matter in dealing with perishable merchandise, and an extra amount should in all cases be remitted towards the cost of such special packing.

BEGONIAS, DAHLIAS, ROSES, FRUIT TREES & OTHER PLANTS:—Begonias (see page 112) and Dahlias (see page 141) are supplied for Export in dry tubers only, and must in all cases be left to our own selection of sorts. The Dahlias offered on pages 142 to 145, are as young green plants, and quite unsuitable for Export. Begonias, Dahlias, Fruit Trees, Roses, Chrysanthemums, Pelargoniums, &c., can only be sent out late in the Autumn or during Winter, when they are in a dormant condition.

CUSTOMS OR POSTAL REGULATIONS:—Where special regulations or restrictions are in operation regarding the importation of Potatoes, Plants, Trees or Tubers, it will greatly help us if our customers will kindly make themselves acquainted with those which apply to their particular province, and give particulars of such at the time of ordering, to enable us to comply with them if possible, and thus prevent delay in delivery or confiscation. In those countries where Plants, Roses, Trees, etc., are admitted only under special permit, it is important that customers should obtain such permits in duplicate beforehand from the proper Official Authorities, enclosing one copy to us with the order and retaining the other for production when required at their end.

VEGETABLE SEEDS.

We offer special Collections which are made up from the most reliable and suitable varieties for Foreign and Colonial climates, and are composed of the sorts mentioned below, in boxes containing proportionate quantities.

DANIELS BROS. Ltd., SEED MERCHANTS AND NURSERYMEN NORWICH :: ENGLAND.

SEEDSMEN BY APPOINTMENT TO HIS MAJESTY KING GEORGE V.

NURSERYMEN
BY APPOINTMENT
TO HER MAJESTY
QUEEN ALEXANDRA.

To-our-Customers

In once again issuing a new edition of our ILLUSTRATED GUIDE FOR AMATEUR GARDENERS, we take the opportunity of sincerely thanking our numerous customers for their continued patronage during the past year, and we beg to assure them we will continue to do our utmost to merit a continuance of their support.

We highly appreciate the many recommendations given by our customers to their friends, and are always pleased to forward Catalogues, free of charge, on receipt of the names and addresses of anyone to whom they may be of interest.

THE SEED HARVEST OF 1913. Although many of the growing seed crops were said to be suffering from the very dry weather in early Summer, we are pleased to state that the yield of most kinds of Peas and other Garden Seeds has been, on the whole, decidedly better than in 1912, whilst the germinating powers of all are excellent. Runner Beans were however a short crop, though of very good growth. We have secured an ample supply of the finest stocks of seed for our very large retail trade, and have pleasure in stating that in many instances we are able to quote lower prices than those of last year.

SEED POTATOES. Owing to the excessively dry weather of June and early July, all the early varieties are again scarce, and we strongly advise our customers to place orders promptly for these. All the later varieties however, yielded an excellent crop, and are reasonable in price. We would draw attention to the fine new varieties we offer this season, which we can highly recommend as worthy of a trial.

FLOWER SEEDS. These have been for many years a special feature in our large seed business, our very fine strains of Asters, Stocks, and other Choice Annuals and Florists' Flower Seeds having secured for us a widely extended reputation. Our list has again been thoroughly revised, and many fine novelties for the coming Season have been added.

OUR NURSERIES. We have an unusually well-grown stock of the Choicest Fruit Trees, Roses, Clematises, and other Hardy Climbers, Ornamental Trees and Shrubs, Hardy Herbaceous Plants, Florists' Flowers, &c. Our trade during the Autumn has been exceptionally brisk, and although we have good stocks on hand, we anticipate heavy demands during the coming Spring, and would therefore advise our customers to provide for the filling up of gaps or for starting new planting schemes as early as possible.

We have made every possible preparation for the prompt execution of orders, but as we are invariably very much pressed at the height of the sowing season, we venture to ask our regular customers to favour us with their orders as early as possible in the New Year, whatever may be the state of the weather.

January 1st, 1914.

DANIELS BROS., Ltd.

KITCHEN GARDEN SEEDS.

Our large experience in this department has enabled us to select the finest possible stocks, the same being grown on our own grounds or under our personal supervision. The growth of all seeds is carefully tested before sending out, and customers ordering from us may thoroughly rely on being supplied with the best and newest varieties, all of good growing quality.

DANIELS' COMPLETE COLLECTIONS OF CHOICE VEGETABLE SEEDS.

All Package and Carriage Free.

These Collections, of which we annually sell immense quantities, are carefully made up with seeds of finest quality in best varieties from each class with a view of furnishing an ample supply of Choice Vegetables throughout the year, and will be found extremely valuable for those who have not sufficient time or experience for making their own selection.

As our Collections are made up on a most liberal scale, intending purchasers will kindly bear in mind that it is only by having Seeds specially grown, and by preparing the packets beforehand in large numbers, that we can be so liberal in the quantity of the Seeds supplied for the amount charged, and that by ordering our selections, instead of making their own, will reap an advantage of at least 25 per cent. below the general Catalogue prices. We therefore wish it to be understood that no reduction, alteration, or substitution can be allowed in any of the collections. When ordering please quote Number and Price of the Collection required.

This is a very cheap collection which can be highly recommended.

DANIELS' SEEDS FOR EXPORT.

For many years past we have given special attention to this department, and we take the greatest care that only seeds of the finest stocks, and of the highest germinating quality, are supplied to our clients residing abroad. We have had great experience in packing, and the care we exercise in this respect and in the selection of the best varieties, invariably gives the highest satisfaction.

We have a large number of customers in India, Australia, New Zealand, China, Africa, Canada, United States, South America and other parts, to whom we shall at all times be pleased to refer with respect to the fine results obtained from the seeds we supply to our clients abroad.

From G. H. ORAM, Esq., Southgate.

"I had great success with your Seeds last year, in fact they were on view at Guil Lako, Saskatchewan. I speak more particularly of Beet and Turnip which were very fine; some of the Turnips weighed over six ibs., and not a hit string." a bit stringy.'

From The Rev. C. WOOD, White Bay, Newfoundland.

"I should very much liked you to have seen two crops we dug this year. The Potatoes were your Sensation. It was a sensation reminding mo of It was a sensation reminding me or your plate showing a crop dug at Windsor. The other was a crop of James' Scarlet Intermediate Carrot."

From Mr. S. BELCHER, Eigin, Canada.

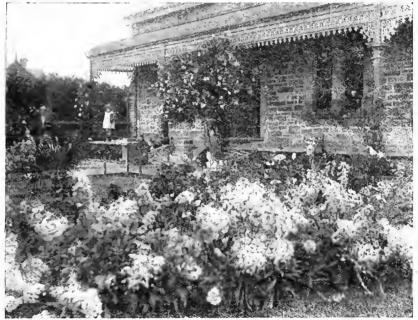

"The Seeds I bad from you did remarkably well, especially the Peas and Lettuces. I shall be surprised if you do not got some orders from this part next year."

From F. E. BUSH, Esq., Ootacamund, India.

"I would like you to know that the Seed Polatoes which you sent to me have arrived in good condition; also the three packages of Seeds you sent per Parcel Post arrived in most excellent condition."

From C. KENELIN GRANT, Esq., Sierra Leone

"I received your last lot of Seeds and they are coming out first-rate."

From F. FAIREY, Esq., Adelalde, showing Daniels Flower Seeds growing in S. Australia. A GARDEN CURNER.

From Capt. G. KENDALL CHANNER, Almora, India.

"Tho Seeds you sent me out last the best Vegetable and Flower Garden in the Station."

A. DOUGLAS SUTHERLAND, Esq., Adolaide, Australia.

"You may be glad to know that 100 may be giad to know that your reputation, good though it bas always been in Adelaido, is of a much wider magnitude than ever before; and the courtesy and promptitude with which your clients are treated is greatly appreciated."

From Mr. H. KENNETT KADINA, Australia.

Anstralia.

"The Seeds reached me safely last ease on, and I had very good lack with hem."

I took parents. them. I took several Prizes at different Shows."

From Mr. C. OFFORD, Estcoart,

"I had some Seeds from you about five years ago through a gentleman in this country, and they were so successful I should like to send you

Mr. W. LINCOLN, Toowoomba, Queensland. "I took Twelvo First Prizes at onr

Took Twelvo First Fizes at our loval Agricultural Society's Show. I also took First Prizo for your Telegraph Carrot. The King Edward VII. Tomato gave the best results, out of eighteen different sorts, both for quality and quantity. Everybody said they were A1."

VEGETABLE AND FLOWER SEEDS.

Special Collections of Vegetable and Flower Sceds for Export are offered, Carriage Free, as below. Where our customers, however, prefer to make their own selection of varieties from the body of the Catalogue an extra amount should be added to their remittance towards the cost of packing and postage. In the case of heavy seeds, such as Peas and Beans, the postage is an important item. All Vegetable and Flower Seeds can be supplied at any time or season.

DANIELS' PARCEL POST COLLECTIONS.

All orders from unknown correspondents must be accompanied by a sufficient remittance.

Cultivation.—Peas form one of the most valuable of garden crops, and when once started into growth, require, under favourable conditions, little attention beyond the staking of such varieties as need support, and mulching and watering in dry weather. Peas require a good rich soil, which should be well tronched, and should receive a liberal supply of well-decomposed manure early in the season. They are essentially a moisture loving plant, and only when the ground is well prepared can really satisfactory results be assured. Given these conditions, it is possible by a succession of sowings to have

a continuous supply of Peas for the table from June till October, or even later.

First early varieties should be sown from the middle of January enwards, and the hest sorts in this class are Daniels' Gem of the Season, Earliest of All, and The Pilot; if the seed is sown in boxes under glass in January, hardened off in a frame and planted out at the latter end of March or early in April, an advantage of ten days or a fortnight may be gained. Second early and main crop kinds should be sown in March and April, and for late use a succession of sowings at intervals from the beginning of May until the end of June should be made. For these sowings the tall varieties will be found more productive, and not so liable to mildew during hot weather. It should be borne in mind that although most of the Wrinkled seeded varieties may be sown in March, we do not recommend this unless the season is exceptionally favourable. We find from a careful record extending over ten years, that little if any advantage is gained by too early sowings, and that Peas sown at the beginning of April take less time to come to maturity than the earlier sown ones. If this rule was more generally followed, we should hear less about bad germination amongst this class of Peas especially in cold wet seasons. The seed should he sown in drills and covered about two inches deep; allow four or five feet between each row unless it is desired to grow some other erop between, when the rows may be 12 to 15 feet apart. Let the rows run from north to south, thus allow-

ng the plants to receive a maximum of light and air. Peas suffer greatly from the depredations of all kinds of vermin, and it will always be found of advantage to give protection either by wire pea guards or some other means while the plants are growing. The rows should be carthed up before they are staked, and this should be done when the plants are about four inches high. If the tops of the sticks are cut evenly, and the pieces which are cut off placed between the large sticks at the base, they will prevent the plants from falling about, and give them an upward tendency from the start.

A good mulching of manure placed on each side of the row will help to retain the moisture in dry weather. Where this is not possible they must be regularly watered during dry periods, and liquid manure given once a week; a mixture containing four ounces of Nitrate of Soda to one gallon of

water will be found very useful for this purpose.

When it is desired to grow Peas for exhibition purposes the following points should be observed .- Sow tho seed very thinly on ground that has been especially deeply trenched for the purpose, and which has been dressed with old farmyard manure or the remains of an old mushroom bed. If they are needed for early Summer Shows it may be desirable to raise the seed on turves in a greenhouse and transfer them bodily to the border when about four inches high, but, generally speaking, if the seed is sown in rows in March and April it will be found early onough.

When the plants have shown about four blooms, pinch out the leader or top of the baulm. As soon as the pods have formed, choose the best shaped, and remove the others, leaving only two or three on each plant. Always select the strongest and healthiest plants for this purpose. When ready to gather, do not handle the pods, but cut off with seissors so as to retain their bloom.

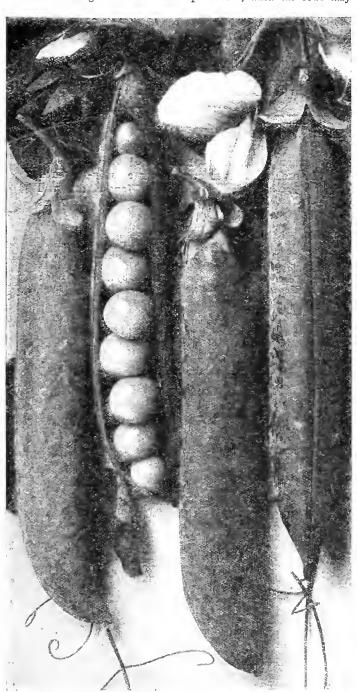

A grand new first early Marrowfat variety, growing to the height of about 18 inches, and of great productiveness, bearing a profusion of handsome dark green pods, $4\frac{1}{2}$ to 5 inches in length, well filled with peas of the most delicious marrow flavour. In habit of growth it somewhat resembles Competitor, but the pods are much darker in colour and better filled. We can strongly recommend this as one of the finest first early varieties Per pint 1s. 6d.; per quart 2s. 6d. yet introduced.

NEW PEA, HUNDREDFOLD.

A new early marrow of great productiveness; it grows about 2 feet high, bearing a heavy crop of fine, handsome dark green pods 5 inches in length, well filled with fine peas of excellent flavour. This variety is well worthy of a trial, as it is sure to give Per pint 1s. 6d.; per quart 2s. 6d. satisfaction.

THE PILOT.

This valuable introduction has taken a leading place amongst the most useful varieties, both for market and private garden purposes. It is a first early cropper producing deep green pods of the well-known Gradus type, and on account of its hardy constitution and the seed being round it may be sown early with the certainty of a crop. It is a vigorous branching plant, growing three feet in height, bearing a large proportion of the pods in pairs, which contain finc deep green peas of excellent Per quart 2s. marrow flavour.

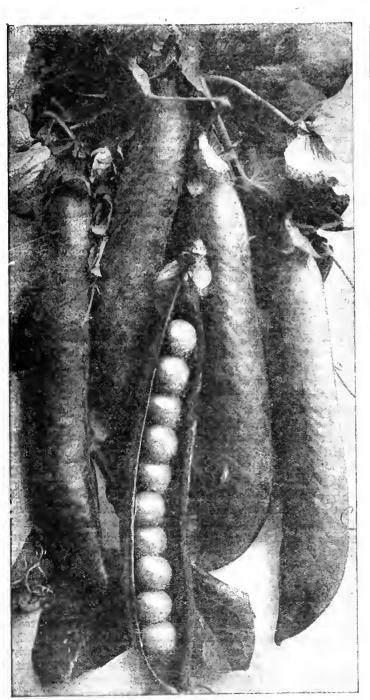

DANIELS' EXPRESS. Reduced from a Photograph.

Section I.—Earliest Varieties.

DANIELS' SELECTED GRADUS.

This large-podded early wrinkled variety, is without doubt the finest and most distinct early Pea yet introduced. The haulm which grows to the height of three to four feet is well covered with large dark green pods, averaging five inches in length, and well filled with eight to ten fine Peas of the most exquisite flavour; indeed, amongst the early varieties it has no rival in this respect. It is an excellent cropper, this combined with its earliness and grand flavour, has made it a favourite with all growers.

DANIELS' SELECTED GRADUS Reduced from a Ph t gr iph.

	NOT.	quai	-1
	DANIELS' COMPETITOR. This grand Dwarf Pea is of the true Marrowfat type, and as early as English	s.	t. d.
	Wonder, the haulm does not grow more than about eighteen inches in height. It is exceedingly prolific, the numerous handsome pods are of large size, four to five inches in length, and well filled with large peas of excellent marrow flavour per pint 1s. 6d.	2	6
	Marrowfat variety, growing only about eighteen inches in height. It is an abundant cropper, bearing quite a profusion of handsome pods of 3½ to 4 inches in length, each with seven or eight large finely-flavoured peas. It is as early as English Wonder, and will prove a splendid and profitable Pea for the market		
	or private grower per pint 1s. 6d.	2	6
	DANIELS' GEM OF THE SEASON. The earliest Pea in cultivation, and very prolific. Is always the earliest, whether sown in Autumn, Winter, or Spring. Is also the bardiest, resisting frost better than any other kind, and is not affected by mildew. Being		
Ì	very prolific and of a most delicious flavour, will be found a most desirable variety for early work. Hoight 3 ft.	2	0
1	EARLIEST OF ALL. A round blue-seeded Pea of excellent and rich	ı	0
	flavour; very prolific, can be sown early. Height 2½ ft. EARLY BOUNTIFUL. A grand first early round Pea. Pods nearly twice the size of Earliest of All, and comes in only a few days		
	later, very hardy, useful for early sowings. Height 3½ ft. ENGLISH WONDER. One of the most useful of the dwarf varieties, of good constitution and very prolific, may be sown earlier than	1	-1
	some of the wrinkled sorts. Height 1 ft KING EDWARD VII. A new early dwarf variety of great productiveness bearing a profusion of dark green pods, well filled	1	3
	with peas of fine quality. It is a wrinkled marrow, and a great acquisition to our early dwarf varieties. Height 1½ ft. LAXTONIAN. A fine early variety of dwarf habit and vigorous constitution, hearing a profusion of long dark green pods four	1	(
	to five inches in length, well tilled with largo peas of the finest flavour Height 1; ft. LITTLE MARVEL. A fine dwarf early variety of compact growth, and an exceptionally heavy cropper. The pods are of medium	2	C
	size and well filled with the peas of exterient havour, a great acquisition to our first early sorts. Height 1 ft. THE SHERWOOD. A remarkably productive early varioty, and is one of the heat Dwarf Peas ever offered. It is an enormous	2	(
	cropper, the haulm being literary covered with pour containing cight to ten large peas of rich deep colour, and of exquisite flavour. Height 1 ft.	1	(
	A large-podded first early Fea, coming in with Earnest of All but with pods of double the size, and rich dark green colour. It is a true wrinkled Marrow, a grand cropper, and the flavour	2	(
	is of the best. Height 3 ft	1	:

" I took First Prize with your Express Dwarf Pea in a contest with sixty allotment holders," - Mr. J. BROOKS, Eirkenhead.

Section II.—Second Early.

DANIELS' DWARF PROLIFIC.

A grand second early dwarf wrinkled Marrow, of strong constitution and sturdy habit, growing about 1½ feet high; it is enormously prolific, bearing a profusion of dark green, slightly curved pods, four inches long, well filled with eight to nine peas of excellent flavour, at the same time it is an excellent variety for forcing, being quite as prolific under glass as in the open. It is a very compact grower, and will be an acquisition to all gardens where space is limited, on account of the little room it occupies as compared with its heavy cropping qualities. per quart 2s.

DANIELS' DWARE PROLIFIC

DANIELS' MIDSUMMER MARROW. A grand early Marrowfat Pea of a good hardy constitution. It is an abundant bearer; the pods, which somewhat resemble Gradus in shape, are 4½ to 5 inches in length and well filled with nine or ten fine peas of excellent flavour. We can thoroughly recommend this as a first-class variety for all purposes.

Height 3 to 4 ft. 2 0

DANIELS NORWICH WONDER. A grand Second Early variety, bearing an abundance of fine shaped pods five inches in length, well filled with nine to ten peas of excellent flavour; a fine addition to our exhibition varieties, whilst its prolificness and excellent table quality make it a most desirable acquisition.

DUKE OF YORK. A fine wrinkled Marrow, of robust habit, pods five inches in length; a very profitable bearer, coming in a few days earlier than Duke of Albany, and like that variety, A 1 for exhibition. Height 31 to 4 ft. ..

LYE'S FAVOURITE. Improved Stock. A new selection of this fine second early variety, of hardy constitution and enormous productiveness, bearing a profusion of long, handsome, slightly curved pods, well filled with peas of excellent marrow flavour. Very useful for early sowing on account of its extreme hardiness. Height 3 to 4 ft. . . THE DAISY. A dwarf second early wrinkled Marrow of great merit.

The haulm, which is very robust, is well hing with handsome pods four to five inches in length, well filled with large peas of excellent flavour. On account of its numerous good qualities it has been awarded a First Class Certificate hy the Royal Horticultural Society. Height 1½ ft. SENATOR. A very prelific variety, bearing the pods mostly in

pairs; these are from four to five inches in length and well filled

with peas of a fine marrow flavour. Height 3 ft. WILLIAM THE FIRST. Selected stock. One of the finest early green Marrows, combining flavour and earliness, and produces a very heavy crop of slightly curved dark green pods, well filled with peas of excellent colour and flavour, and is one of the best varieties for market purposes. Height 4 ft.

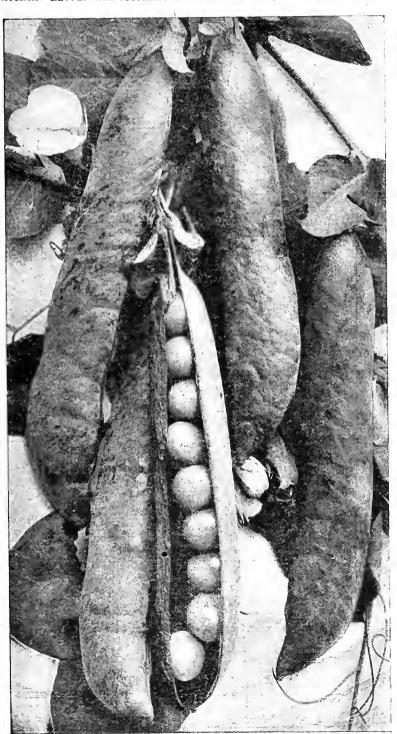

- "I obtained First Prize for your Peas, and a Special Prize for other things grown from your Seeds."—Mr. A. J. BRAY, Ealing.
- "I had a very heavy crop of Peas from the Seeds supplied by you."-Mr. E. OSBORNE, Ashton-under-Lyne.
- "The Peas you supplied me with last year were of excellent flavour."-Mrs. BENT,
- "I may say that your Express Dwarf Pea gave every satisfaction."-Mr. W. HODGKINS, Bromsgrove.
- "Your Express and Dwarf Prolific Peas gave astonishing results, also the Scarlet Perfection Carrot and Red Globo Beet. "The Defiance Cabbage grew to an immense size, and the Sensation Potatoes gave a magnificent crop."—Mr. W. HOLLOWAY, Fort Cumberland.
- "I am highly pleased with your Seeds this year, especially the Duke of Albany Pea."-Mr. A. S. ALLISON, Ponegal.
- "I took First Prize with the Duke of Albany Pea I had from you." Mr. J. POSTON,

Section III.—Main Crop.

DANIELS' SELECTED DUKE OF ALBANY.

A fine selected stock of this useful Main Crop Pea. It grows between 4 and 5 feet in height. The haulm being covered with a very heavy crop of long handsome dark green pods, averaging five inches in length, which are well filled with 10 to 12 large peas of the true marrow flavour. A splendid variety for exhibition, whilst its fine cropping qualities combined with its excellent flavour will recommend it alike to the private grower and the market gardener.

Per quart 2s.

DANIELS' SELECTED DUKE OF ALBANY.

THE DANIELS'. An extra large podded Main
Crop variety of great merit. It is of robust
constitution, the pods are long and handsome,
averaging five to six inches in length, and well
filled with ten to twelve large peas of the
finest marrow flavour. It is a very heavy and
reliable cropper, and a most useful sort for
exhibition; strongly recommended for general
crop. Height 4 ft. .. per pint 1s. 6d. 2 6

ALDERMAN. Received the highest award from the Royal Horticultural Society after trial at Chiswick. In hahit it is strong and branching, producing, a few days later than Duke of Albany, very large handsome, straight, deep green and well-filled pods, which contain peas of the richest Ne Plus Ultra flavour and quality.

Height 5 ft. 2 0

DR. MACLEAN. A fine wrinkled Marrow, of vigorous growth, wonderfully productive, flavour of the first quality ... Height 3½ ft.

FILLBASKET. Very prolifie .. Height 3 ft. GLADIATOR. The plant is very robust and vigorous, stem

branched, growing about three feet in height, exceedingly productive, bearing in pairs an abundance of long, curved handsome pods, which are very closely filled with medium-sized peas of excellent quality. First Class Certificate, R.H.S. .. Height 3 ft.

MACLEAN'S WONDERFUL, or PRINCE OF WALES. Excellent cropping variety of superior flavour

Height 3 ft.

MAGNUM BONUM. This grand Pea is of a fine robust constitution, and resists mildew in dry seasons. The pods are of a deep rich green colour, measuring about 5 inches in length, and contain 10 to 11 peas of excellent marrow flavour. A very heavy cropper

Height 3 to 4 ft.

PEERLESS MARROWFAT. A grand large-podded main erop variety, which may be described as a dwarf Duke of Albany, the podis being equal in size to that variety, whilst it is quite as prolific, and has the decided advantage of growing only three feet in height Height 3 ft.

"I won First Prize in open class of twenty-three entries for a dish of your Matchless Marrow Pea."—Mr. T. WELLS, Cuckfield.

"I have won First Prize for three years in succession with your Matchless Marrow Pea. I got Eleven Prizes out of thirteen entries."—Mr. E. BAKER, Sidmonth.

"I have had your Matchless Marrow Peas for years, and always found them to do well."—Mr. C. NIBLETT, Wroxall.

"From the pint of Matchless Marrow Peas I purchased from you I gathered over fifteen pecks of fine pods like enclosed, and there are quite ten or eleven pecks more. All who have seen and tasted them think they are the finest they have ever secu."—Mrs. J. J. CORLETT, Michael.

"I took First Prize with your Matchless Marrow Pea, out of seventeen competitors."—Mr. E. LEWIS, Cardiff.

"I took Five First Prizes with your Matchless Matrow Pea,"-Mr. W. DUDLEY, Beaufort.

A grand long-podded maincrop variety, growing about 3 feet high. The haulm, which is very robust, is well hung with large pods, which are of a deep green colour, averaging from 5 to 6 inches in length, and contain 10 to 11 fine Peas of excellent colour and of the finest marrow flavour. Its great prolificness, combined with the large size of the pods, make it one of the most useful varieties, both for table and exhibition purposes. We can strongly recommend this fine variety to our customers. Per pint 1s. 6d.; Per quart 2s. 6d.

Section III.-Main Crop.

QUITE CONTENT.

This is undoubtedly the largest-podded rea yet introduced. It somewhat resembles Alderman, but with stronger growth and longer pods. It is exceedingly prolific, and the pods hang mostly in pairs. Grand exhibition variety. Height 5 to 6 ft.

Per pint 1s. 6d.; per quart 2s. 6d.

DANIELS' COMMANDER. A fine dwarf Marrowfat of robust constitution, bearing a heavy crop of rich dark green pods, well filled with large peas of the finest flavour. Height 1½ to 2 ft.

Per pint 1s. 6d.; per quart 2s. 6d.

Section IV.—Late Varieties.

DANIELS' DISTINCTION.

A very fine late variety which comes in about the same time as "Ne Plus Ultra," and which it rivals in its culinary qualities. The plants are of strong robust growth, attaining a height of about 3½ feet, and producing an abundance of handsome dark green, slightly-curved pods, five to six inches in length, filled with large peas of the finest and most delicate flavour. We can highly recommend this as one of the very best for exhibition; for a late crop it is unrivalled.

Per pint 1s. 6d.; per quart 2s. 6d.

GLORY OF DEVON. Award of Merit, Royal Horticultural Society. A fine addition to our late varieties of Peas. It is of hardy constitution and a robust grower, the foliage being of a rich dark green. The haulm, which grows about four feet in height, is well laden with fine handsome pods, each containing eight to ten large peas of delicious flavour. For exhibition it is first-class.

Per quart 2s.

DANIELS' NORFOLK GIANT LONG-POD From a Photographic

BEANS—Broad.

Cultivation.—This highly nutritious vegetable grows well in any good garden soil, but responds readily to liberal treatment and should, therefore, when possible, be grown in well-prepared ground which has received a good supply of manure. The cultivation is of the easiest and everybody should be able to grow them successfully.

The cord should be sown in double rows 6 inches apart, with an inter-

vening space of 3 fcot between the pairs of rows; place the seed 6 inches apart in the rows, earth up the plants by drawing the soil around them, when they are about 6 inches high, give a good covering of ashes to keep off the slugs.

When the plants have made a good growth and set a nice quantity of bloom, the centres should be nipped out, thereby throwing more vigour

into the pods.

A liberal supply of liquid manure given at intervals during the bearing season will add much to the size of the pods, as also will a mulching of decayed manuro, if put on before the hot weather comes.

The Windsor varieties whilst not giving such long pods are of excellent flavour; the best varieties for exhibition purposes are Daniels' Norfolk Giant Long-pod, which produces the finest pods of any of the long-podded section, and Daniels' Mammoth Windsor, which is by far the best of its

WHITE-SEEDED VARIETIES,

- DANIELS' NORFOLK GIANT LONG-POD. The The longest-podded Bean known, has been grown up to 18 inches in length. The pods are of very handsome shape and excellent quality. First-class for exhibition, having obtained numerous First Prizes per pint 1s. 3d. 2 0

[&]quot;I am pleased with your Cabbage and Broad Beans, I have taken several Prizes athem."-Mr, J. CLARKE, Rotherham,

DANIELS' GIANT SCARLET. Reduced from a Photograph.

BEANS—Runner.

Cultivation.—Runner Beans form one of the most important and profitable of all garden crops grown for Summor and Autumn use, and yield a liberal supply of vogetables available for use after the main crop Peas are over.

They are easy of culture and may be grown as screens in small gardens, thus serving the double purpose of covering a trollis or wall and at the same time yielding a crop of delicious vegetables.

The ground should be prepared in the same manner as for other Beans, but Runners being somewhat tender the seed should not be sown until early in May.

Sow the seed in double rows 9 inches apart and, if possible, allow a space of 12 feet between each double row, cropping the intervening space with other vegetables.

For a succession make further sowings in June and July.

When the plants are about 9 inches high, draw the earth round them, and place tall, strong stakes to the rows, taking core to make them very firm and able to withstand the wind. A good mulching of rotted manure during the cropping season will lengthen the period of bearing and give quality to the beans.

Where it is impossible to procure tall stakes, it is the practice to take out the leading growths when the plants are about a foot high, thus encouraging a spreading habit and in this way good crops may be grown and space economised.

The best varieties both for exhibition and general purposes are Daniels' Giant White and Daniels' Giant Scarlet.

- both for exhibition and the table, and is at the same time one of the most prolific varieties with which we are acquainted. The pods are long, straight, and of excellent quality. Our own selected stock pint 1s. 6d. 2 6
- DANIELS' GIANT WHITE. This is without doubt the finest type of Runner Bean extant, bearing in profusion long, green, thick, fleshy pods, upwards of twelve inches in length and nearly two inches in breadth. This variety, besides the best for culinary purposes, will also be found a grand exhibition kind ... pint 1s. 6d. 2 6
- Runner Beans, producing fine straight pods fifteen inches in length, and is enormously productive. A grand sort for exhibition pint 1s. 6d. 2 6
- white EMPEROR (new). A fine white seeded variety bearing a heavy crop of long straight pods quite equal to the Scarlet Emperor. It will make a most valuable variety for Exhibition, at the same time it is enormously prolific ... pint 1s. 6d.
- BEST OF ALL. One of the longest-podded of the Searlet Runners, very prolific. The pods, which are long, straight, and very handsome, are produced in large clusters. It is of excellent table quality, and one of the best for exhibition—pint 1s. 3d.
- NE PLUS ULTRA. A fine variety for exhibition and main crop, producing a large quantity of fine pods of splendid form, from ten to fourteen inches long, and quite straight. To grow it to perfection each bean should be planted one foot apart in the row ... per pint 1s. 1 9
- OLD SCARLET RUNNER. For general crop .. per pint 8d. 1 2
- VEITCH'S CLIMBING KIDNEY BEAN. First Class Certificate, Royal Horticultural Society. This Bean combines the best features of the two types, Dwarf French and Scarlot Runner. It crops earlier than the Runnors and has all the delicate flavour and quality of the Dwarfs; height six to seven feet...

"I am delighted with your Runner Beaus. I have a grand crop; the finest I have ever seen."—Mr. G. [THORNE, Cardiff.

[&]quot; Your White Emperor Runner Beans won First Prize at our Show." — Mr. W. SOWDEN, Torpoint,

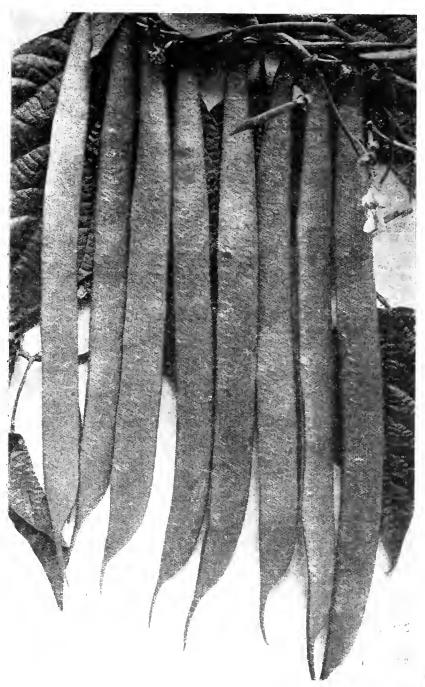

BEANS—Dwarf French.

Cultivation.—This useful vegetable may be grown by almost any one, as sufficient space for a row may be found in even the smallest garden. With attention to the preparation and manuring of the ground, there should be no difficulty in having a continuous supply of French Beans for a considerable portion of the Summer and Autumn.

The culture is of the simplest; the ground having been thoroughly dug and manured in early Spring, the Beans should be planted about the end of April; the rows should be 2½ feet apart and the Beans placed about 4 inches apart in the row, any gaps in the row may be filled up by transplanting the seedlings when just past the seed leaf.

The soil should be drawn round the plants to protect them from cold winds in Spring, and during the time of bearing occasional waterings with weak liquid manure will add much to the size of the produce and lengthen the period of bearing. Daniels' "Incomparable" can be highly recommended on account of its great prolifieness and excellent quality.

Where greenhouses are available the earliest sowing may be made at the beginning of April and the young plants transferred to the outside border when large enough to handle. A crop may also be grown in the early months of the year in heated frames or greenhouses, the seed being sown in 8-inch pots half filled with good rich soil, and the pots gradually filled up with soil as the plants grow. It is most important that French Beans should be gathered as soon as ready, otherwise the plants will gradually give up blooming and the crop be much reduced.

DANIELS' INCOMPARABLE. From a Photograph.

DANIELS' INCOMPARABLE (new).

This splendid dwarf Kidney Bean since its introduction has fully justified our high opinion of it, both as regards quality and prolificness. The pods are of great length, straight, and of a rich clear green colour, very tender, and of the best culinary quality. It is of strong constitution, sturdy habit, and wonderfully prolific. It is quite distinct in the seed and has proved a decided acquisition ... per pint 1s. 6d. 2 6

DANIELS' EARLY BLACK WONDER.
We can highly recommend this splendid variety as one of the hardiest and most prolific French Beans in cultivation. The pods are long, of a light rich green colour, tender, and of fine flavour.....

nearly transparent, and of a bright yellow colour, which is retained when boiled; excellent flavour 2 0 EARLY WARWICK. A distinct early variety of great productiveness; quality first-class; most

"I have taken First Prize with your Incomparable Dwarf Bean, also six other First Prizes and one Second Prize for other Vegetables grown from your Seeds." Mr. W. LING, Rockland.

" I am pleased to tell you that I took several Prizes with Vegetables grown from your Scale,"—Mr. H. J. ELIAS, Walford.

"I got some splendid vezetables from your Seeds."—Mr. \boldsymbol{W}_{\star} APPLETON, Trinidon Colliery.

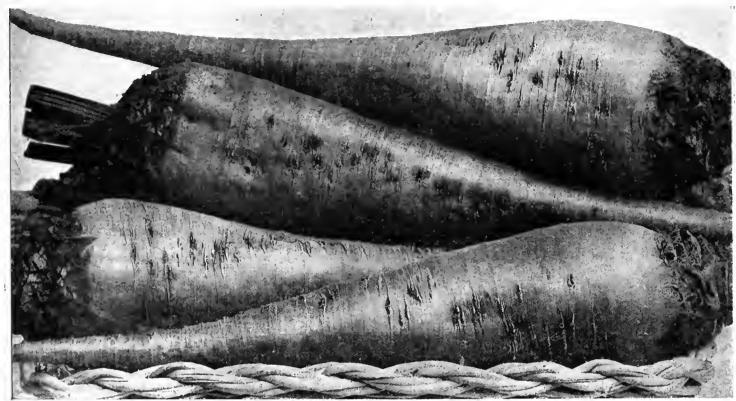

"I took eight Prives from eight exhibits at our Show. Pirst for Collection of Vegetables, nine varieties." Miss GOLDSMID, Gt. Missenden.

"I have taken hirst Prize for a Collection of Vegetables, and eight First, two Secont, and three Third Prizes for other exhibits,"—Mr. R. WING, High Wycombe.

"I had excellent crops from the Seeds 1 had from you last year." Mr. J. R. COLLINS, Boston.

"Your Vegetable Seeds were grand last year." Mr. W. MORRIS.

BEET.

DANIELS' CRIMSON PERFECTION. Reduced from a I hotograph.

Cultivation.—To ensure a crop of good Bectroot, it is of the highest importance that the seed should be of the very best strain procurable such as offered by ourselves. Another very important point to observe is that the ground must not be specially manured for this crop, a good plant being to select a plot that has been cropped during the previous season with French Beans, Potatoes, or Celery. The soil should be a good light loam where possible, and in an open part of the garden; the ground should be deeply trenched (the deeper the better) quite early in the season. sowing, the ground should he made firm and level.

Sowing, this ground should be made in a line level.

Sow the seed any time from the middle of April to the end of May. For an early crop New Red Globe is one of the best. Daniels' Crimson Perfection and Green Top will be found the most useful for a general crop. The seed should be sown in drills one inch deep and about 18 inches from row to row. A liberal quantity of seed should be used to ensure a good plant, and when the seedlings are nicely up, they should be thinned out, leaving them about 9 inches apart. As a rule those sown at the end of May produce roots of better quality. Keep the beds regularly hoed and weeded so that

the soil may be free about the plants.

When specimen roots are wanted for Exhibition, it is the usual practice to make holes about 2 feet deep in the bed with a crowbar, and fill them with fine soil. The seeds are sown in these and thinned out, one plant-being left to each hole. In this way splendidly shaped roots are grown. The crop should be lifted in October and stored in dry send in a shed or cellar for Winter use. Care should be taken that the roots are not injured in any way, or they will bleed and lose quality; also the leaves should not be cut but twisted off with the hand. In this way the roots may he kept until the following Summer.

CRIMSON PERFECTION A grand dark-leaved variety of medium size and very symmetrical. The flesh, which is of the finest texture, is deep crimson in colour and of excellent quality. A first-class sort for exhibition. Owing to the fine deep colour of its foliage it is very valuable for ornaper pkt. 6d. 1 6 mental purposes DANIELS' BLACK QUEEN. Fine dark leaved variety, roots medium in size, and of good shape and colour ... per pkt. 3d. CHELTENHAM GREEN-TOP. Roots very dark, of excellent quality; one of the hest for pickling per pkt. 3d. DARK RED SALAD. A very useful variety, roots of a good deep colour .. DRACÆNA-LEAVED. A highly ornamental variety for the Flower Garden. The leaves are fine, long, and of a deep rich crimson. The root is of fine quality and excellent colour per pkt. 4d.

"Your Vegetable Seeds last year were wonderful; not one failed." Mr. J. DUTTON.

All your Vegetable Seeds were the finest I have ever grown." -Mrs. WORTHING-

The Seeds I had from you last year proyed excellent. I took five First Prizes."— Mr. T. BARBER, Beeding.

DANIELS' GREEN-TOP. This splendid Green-top Beet is chiefly remarkable for the fine deep colour of the roots, which are of excellent shape and of first-class quality and flavour ... per pkt. 4d.

exceptionally fine shape and colour ... per pkt. 3d.

EGYPTIAN DARK RED TURNIP-ROOTED. One of the best for per pkt. 4d. Summer Salads, as it comes to maturity very early . . . NEW RED GLOBE. A valuable variety for early use. The roots are of fine globular shape, of rich colour and excellent flavour. It should be used early, if allowed to stand too long it loses as to quality. Useful for exhibition per pkt. 4d. NUTTING'S DWARF RED. Fine dark foliage . . , 3d. PRAGNELL'S EXHIBITION. A fine dark-leaved variety, roots very per pkt. 4d. 0.10 bandsome and of good colour ... per pkt. 4d. SILVER SEA KALE. The leaves make an excellent substitute for per pkt. 4d. Spinach

I took First Prize with your Red Globe Beet last year."- Mr. T. MORTIMER, Llanbarran.

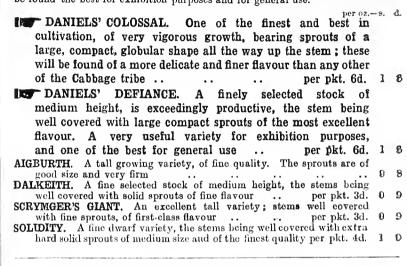

[&]quot; I might say that I have never grown any better vegetables than those from your Seeds."-Mr. R. LEGG, Swindon.

[&]quot; I was very successful in exhibiting the produce from your Seeds, of which I cannot speak too highly."—Mr. J. DEWIS, Numeaton,

BRUSSELS SPROUTS.

Cultivation.—To grow Brussels Sprouts successfully the seed should be sown at the latter end of February or early in March on a sheltered bester of in a frame. Prick out the seedlings about four inches apart into seed beds as soon as they have made the first leaves, and directly the weather allows plant out permanently into well prepared ground, such as is used for general garden crops. For a later crop, a sowing should be made at the end of Marck, or early in April, and the seedlings planted as soon as possible; they cannot very well be planted out too early. Brussels Sprouts require plenty of room to develop, and therefore they should never be planted thickly. About 2½ feet apart in the row and 3 feet between the rows would be a suitable distance Give a good supply of water when they are first planted, and keep the ground loose by frequent use of the hoo.

Brussels Sprouts thrive much better by themselves than when planted amongst other crops. In dry weather liberal supplies of liquid manure will be found of great advantage. Daniels' Colossal and Defiance are first-class stocks, and will be found the best for exhibition purposes and for general use.

[&]quot;I took numerous Prizes last year. Out of twelve entries I took twelve Prizes. Your Colossal Brussels Sprouts were the finest I have ever grown,"—Mr. E. PARKER, Stamford.

[&]quot;I took several Prizes last year with Vegetables grown from your Seeds."—Mr. W. HICKS, Malvern.

Cultivation.—Borccole is of great value for providing a supply of tender green heads from Christmas onwards, during the very severe weather when Cabbages and Broccoli are not available. Many varieties of Borccole are also quite ornamental and present most attractive objects in the kitchen garden. Sow the seed in April in seed beds, and when the plants are large enough transplant them into their permanent quarters about three feet apart. As an alternative they may be planted between Potato rows.

Borecole likes good soil, but does not require liberal treatment with liquid-manure, etc., as many plants of the same family do. Give a thorough watering at the time of planting out. If there is any tendency to "clubbing" noticed in the garden, a dressing of lime applied in the Spring previous to planting will be found of great advantage. Daniels' Improved Drumhead can be highly recommended on account of its excellent flavour. It is much milder than semevarieties. Daniel's Moss Curled Exhibition will be found invaluable for general purposes.

Daniel's Moss Curled Exhibition will be found invaluable for general purpo per oz.	ses.	٠

BROCCOLI.

DANIELS' NORFOLK GIANT.

FOURTH DIVISION.

Sow in May and June for cutting in May and June the following season.

DANIELS' KING OF THE BROCCOLI. This splendid variety comes in for cutting from the beginning of May to the first week in June, and as a late kind cannot be surpassed. It is of a fine dwarf habit, and being well protected is exceedingly hardy. The heads are remarkably fine 0 6

DANIELS' LATEST WHITE. One of the best kinds for filling up the gap or period that occurs between Broccoli and Cauliflower.....

Cultivation.—This excellent vegetable is of the greatest value during the Winter and early Spring, when Cauliflowers are not obtainable and vegetables generally are scarce. They like a good rich firm soil, which has during the previous Autumn been thoroughly trenched and liberally manured. If possible, choose a piece of land on which Celery has been grown.

The earliest sowing of seed should be made at the latter end of March, and the principal sowings during April, whilst May will be soon enough for the late varieties. Sow the seed either in a warm sheltered border or in a frame, in drills eight or nine inches apart and one inch deep. When the plants are large enough to handle, lose no time in pricking them out, as they quickly suffer if allowed to remain too long in the seed hed, becoming drawn and weak. The final plantings should be commenced in May, and followed on as opportunity occurs until the end of July, and as land becomes available. Choose the strongest plants first, as by this means a much better succession will be obtained.

succession will be obtained.

The most important point in planting out Broccoli is to be quite sure that the ground is very firm; the harder it is the better it will be for the plants, as they will thereby be able to withstand the Winter, therefore if the land was trenched and manured during the past Winter, do not have it dug again just previous to planting out. Make the rews about 21 feet apart and place the plants about two feet apart in the rows. Water the plants thoroughly after planting and keep the weeds down.

THIRD DIVISION.

Sow end of March and beginning of April for cutting in March and
Abril the following season.

right the following season.				
DANIELS' NORFOLK GIANT. DANIELS' KING OF THE BROCCOLI.

DANIELS' DEFIANCE. THE FINEST CABBAGE IN THE WORLD.

We highly recommend this magnificent Cabbage, which we claim to be the finest in the world. It is medium early, short-legged, and compact, and grows to a great size, at the same time retaining all the tenderness and delicacy of flavour of the smaller varieties. First-class for the private grower or market gardener. The seed we offer, which is our own true and original stock, has been carefully grown at our Seed Grounds from the stalks of fully developed and first-class Cabbages only, and owing to the many years of careful selection will be found of an unequalled and thoroughly reliable quality. Per packet 6d.; per oz. 1s. 6d.

 - "Your Little Queen Cabbage took First Prize at our Show."- Mr. W. SMITH.

SAVOY CABBAGES.

SAVOY CABBAGE-DANIELS' SELECTED DRUMHEAD.

Cultivation.—Excellent Cabbages can be grown, without much outlay, by everyone possessing a garden. They prefer a good rich loamy soil, a liberal supply of mannre, and as open a position as possible. The hos should be kept going every week on the beds, and an occasional application of Nitrate of Soda or Sulphate of Anmonia (at the rate of one ounce to the square yard) is recommended before the hearts form, when good succulent Cabbages are assured. For Summer and Autumn use, sow the seed in March, and a succession in April and May if required, and when the plants are large enough, prick out into seed beds, and finally plant out in rows two feet apart for the stronger growing varieties, such as Daniels' Defiance and Enfield Market, with two feet between each plant. For the smaller varieties such as Little Queen, Ellam's Early, Nonpareil, &c., rows 18 inches apart, and 15 inches from plant to plant fulfil requirements. Cabbages are highly appreciated in early Spring. For this crop the seed should be sown in the Northern districts in July, and in the Midland and Sonthern districts during Angust.

RED CABBAGES. Seed may be sown either in Spring or Autumn; if sown in the middle of August and planted out later, splendid heads will be produced the following Autumn.

CARROTS.

DANIELS' TELEGRAPH. Reduced from a Photograph.

Stump-rooted Varieties.

DANIELS' SCARLET PERFECTION. A grand main crop variety of the intermediate type, and being stumprooted, it is well adapted for growing on soils where deep culture is not possible. The roots are of a bright orange colour, very handsome and uniform in shape, with a fine clear skin, which makes it a most desirable sort for exhibition. It is one of the best flavoured and heaviest cropping varieties for general use, and one we can highly per pkt. 4d. 1 0 recommend DANIELS' NEW EARLY FORCING HORN. One of the earliest Carrots yet introduced. In shape it is nearly round. They can be left thickly in the row, and drawn for use as required per pkt. 4d. 1 DANIELS' HARBINGER. A fine Carrot for early exhibition; the roots are of good shape and excellent quality, averaging four to five inches in length, and three inches in diameter. It is a distinct and useful Carrot per pkt. 4d. 1 0 DANIELS' LONG RED WITHOUT HEART. Flesh bright red, without the core usually found in the carrot ... EARLY FRENCH NANTES. A medium-sized, stump-rooted variety of vory fine quality
EARLY SCARLET HORN. A stnmp-rooted variety. Very useful

for first early crops

Long Varieties.

DANIELS' TELEGRAPH. This grand Carrot is one of the best forms of intermediate yet introduced, being far in advance of the old James' Scarlet. It produces a heavy crop of roots, which are of uniform shape, attractive colour, and very clear in the skin. Where sufficient depth of soil exists it will prove one of the most profitable sorts to grow. It is unequalled for exhibition purposes, having obtained more First Prizes than any Carrot with which we are acquainted

Cultivation.—By attention to a few points of importance, splendid clean straight Carrots can be cultivated without great delay. It is not necessary to manure the land for a Carrot crop, in fact, freshly mannred land is a drawback; the soil should be (where possible) of a deep light nature, and the land should, the Antumn previously, be deeply trenched two to three feet, and a quite light dressing of manure given at the same time; land which has been recently used for Colcry is excellent, and will not need specially manuring.

For the earliest crop, make a sowing on the hotbed in frames between the rows of early Potatoes, and pull the Carrots quite small. The first sowing of the outdoor crop should be made early in April on a warm border, Daniels' "Harbinger" or "Forcing Horn" being excellent kinds; make other sowings in succession through the Snmmer until August, when the best kind to sow is "Scarlet Horn." For main crop, "Daniels' Scarlet Perfection" and "Telegraph" can be highly recommended.

Carrot seed should be sown on bordors of finely worked soil, in drills about a foot apart. When the plants are nicely up, thin out gradually, leaving the smaller growing kinds such as "Forcing Horn," to be pulled as required, and the larger kinds seven to nine inches apart. Keep the hoe going between the sows to ensure cloanliness, and nothing more is needed until the end of October, when the crop should be lifted, the tops carefully twisted off, and the roots stored in dry sand in a cellar, for use as needed during the Winter.

When specimen roots are wanted for exhibition, it is the practice to make holes with a crowbar, and fill with fine soil, sowing the seeds on the top and thinning out to one plant in each hole, as advised for Parsnips.

[&]quot; I got eight Prizes with your Carrots and Parsnips last year." —Mr. W. WILSON, Carstairs.

[&]quot;I took two First Prizes last year with Carrots grown from your Seeds." - Mr. F. LEE, Roxwell.

[&]quot;I got First Prize with your Telegraph Carrot at our Show."—Mr. L. DRAGE, Bishop's Stortford,

[&]quot;Your Carrots have got on magnificently, and they are the best I have ever grown." -- Tr. H. J. COBB, New Southgate.

CAULIFLOWERS.

DANIELS' KING OF CAULIFLOWERS.

" I did very well last year with the Cauliflowers and Onions grown from your Seeds." -Mr. T. HARPER, Newport.

The Cauliflower I had from you turned out very fine and I was pleased with it."-Mr. E. WOOD, Buckley.

"I am pleased with all the Seeds I had from you. I took eight First, two Second, Third, and three Special Prizes at Woodchurch Show."-Mrs. MARSON, four Third, Woodchurch.

"I took several Prizes at our Show with Vegetables grown from your Seeds."-Mr. T. KNIGHT, Chorley Wood.

Cultivation.—The Cauliflower is one of the choicest of our vegetables, and requires much eare and very liberal treatment. Cauliflowers are very liable to bolt if any check occurs in their growth, and therefore every care should be taken that they grow on from start to finish without a break. It does not much matter whether the soil on which Cauliflowers are grown is light or heavy, so long as it is thoroughly trenched, and a very liberal quantity of farmyard manure applied. To get the earliest Caulillowers, the seed should be sown in September in the open, and transferred when big enough to cold frames for the Winter months. Early in March select a warm border and plant them out when a very early crop will be secured.

The earliest Spring sowing should be made in February in boxes on

a hot bod, and the plants moved to frames and gradually hardened so as to the ready to plant out in May. A succession of sowings should be made in March in frames and in the open during April, May, and June, so as to secure an unbroken supply. Cauliflowers are most highly prized in Autumn whon the Summer crops are over, and it is as well to have more than one thatch. When planting and also during dry weather, great care should be given to watering. Frequent applications of liquid manure will give size

to the heads for exhibition purposes.

Cauliflowers are particularly subject to white fly which causes the plant to become blind, and any suspicion of this should be met with a dressing of soot upon the leaves in the early morning. The beds should be regularly gono over to ensure the heads being cut before they get too old as they soon get past their best. For early work, Daniels' King is undoubtedly the best, followed by Dwarf Mammoth and Autumn Queen. For general erop, Autumn Giant will be found the most usoful.

Daniels' king of cauliflowers. The earliest variety in cultivation, of very dwarf and compact habit, the heads beautifully white and of the finest texture. Seed raised in frames in February, and planted out as soon as the weather permits, will produce some fine heads in June. One of the best to sow for succession through the summer .. per pkt. 1s. 6d. and 2s. 6d.

DANIELS' SNOWBALL. An invaluable early variety of dwarf compact habit, producing fine white heads of excellent quality. Ready to cut in four months from time of sowing

per pkt. 1s. 6d. and 2s. (d. -DANIELS' DWARF MAMMOTH. A very superior dwarf carly variety, grows to a larger size than Daniels' King, and forms a good succession to that variety, heads large, white, and comper pkt. 1s. 2 6

pact. Also useful for forcing ... per pkt. Is. ECLIPSE. This is an excellent large Autumn variety, and very useful for Market purposes. By successional sowings it can be had from August to Christmas per pkt. 6d.

pkt,--s. d.

CELERY.

Cultivation.—This very important vegetable is one that fully repays a liberal outlay both of labour and manure. Being a moisture loving plant and a gross feeder, it should, if possible, be raised in soil where, during the growing period, copious supplies of water can be applied. For the carliest crop sow the seed about the middle of February, giving some heat, and when the plants have made their seed leaves, have them pricked off into boxes or frames, giving if possible a gentle bottom heat to keep them growing. Make a further sowing in March in a similar way, and, if necessary, another in April in an open border; these later sowings will give some useful Celery for cooking. It is an excellent plan to get the Celery trenches ready quite early in the scason, so that advantage may be taken of the first favourable showery day to put out the plants when large enough.

In making the trenches throw out the soil 12 or 14 inches deep and 18 inches wide, and be careful to retain tho top soil so that it may be placed in the bottom of the trench; mix with it a good dressing of farmyard manure and in this mixture the young plants should be placed; the rest of the soil taken out of the trench should be piled up on the sides and used, when the time comes, for carthing up the Celery; allow a space of three or four feet between the trenches.

In planting out the Celery in the trenches, place the seedlings about nine inches apart, in a single row for the earliest crop; for the main crop they are often planted in double rows. In dry weather give liberal supplies of water or liquid manure to keep the plants growing, as if they get a check they are liable to bolt.

It is a good plan to give a sprinkling of soot over the foliage, while damp

with the early morning dew, in order to keep away the Celory fly and snails.

The greatest care should be taken in earthing up Celery. As soon as the plants are about nine inches high, go over them and thoroughly clean off all side shoots, and tie the growth loosely with Raffia. Choose a fine day, and gradually work down some of the finest soil round the bases of the plants, being most careful not to allow any of the soil to get between the leaves; do not make the soil too hard, or it will stop the growth. Continue to earth up as the plants grow. The final earthing should form a ridge as a protection. In very severe weather it will be found an advantage to give a slight covering of straw or bracken over the top of the row.

WHITE VARIETIES.

- has now firmly established its reputation as one of the very best for early work, and has become highly popular. Sown at the same time, it is ready for use quite six weeks earlier than any other variety. The heads which grow to a large size, are very firm and solid, and of a sweet nutty flavour

 DANIELS' GIANT WHITE. This grand Celery is undoubtedly one of the largest and best white varieties in cultivation. The heads are very solid and of excellent flavour.

 Very fine for exhibition

 SANDRINGHAM DWARF WHITE. Useful early variety

 SEYMOUR'S SUPERB WHITE. Heads very solid, fine flavour

 SILVER PLUME. A fine, white-leaved variety. It blanches well by simply tying up the plants with matting

 RED VARIETIES.
- DANIELS' EARLIEST PINK (new). This grand new Celery is a useful companion to our Earliest White, and like that variety comes into use quite six weeks earlier than the old varieties. It grows to a large size, the heads being very solid and of excellent flavour. A most valuable variety for early DANIELS' GIANT RED. The largest red variety grown. The heads are of splendid colour, very solid, and of fine nutty flavour, one of the very best for exhibition purposes. The seed offered is saved from carefully selected heads only DANIELS' EXHIBITION PINK. A very fine Celery, producing large solid heads of a delicate rosy pink colour. A fine variety for exhibition, and of excellent flavour 6d. and 1 0 CLAYWORTH PRIZE PINK. Heads very large, solid, and of a beautiful rosy pink colour. A most useful varioty for general crop MANCHESTER FINE RED. Large, solid heads 3d. and 0 STANDARD BEARER. Heads firm, solid, and of an attractive nutty .. 3d. and 0 CELERIAC, or TURNIP-ROOTED CELERY. [&]quot;I have taken two First Prizes with your Celery at Swindon Show. It has been greeord year,"-Mr. W. GRIFFIN, Swindon,

DANIELS' GIANT WHITE. Reduced from a Phitigriph.

CRESS.

CRESS, GROWING IN BOX.

PLAIN. The best for early salads per qt. ls. 6d., per pint 10d. CURLED. For salads in the second leaf ,, ls. 8d., ,, ls. AUSTRALIAN or GOLDEN. This valuable Cress is a most desirable addition to all salads DANIELS' GARNISHING or PARSLEY-LEAVED. Useful alike for salads and garnishing

AMERICAN or LAND. Eaten as Water Cress in Winter ...

SORREL-LEAVED. The largest-leaved of all, dark green colour, and good flavour. A most useful salad WATER. Sow in a moist shady place per pkt. 6d. and 1s.

Cultivation.—Cress is one of the most useful salads grown, and it is quite easy to keep up a continual supply, as no expensive appliances are needed. If a greenhouse is available, fill boxes with good soil to within about half inch of the top, pressing the soil firmly, then sow the seeds thickly and evenly but do not cover them with soil. Put the boxes in a dark place and give a good watering; in about a fortnight the cress will be ready to cat. By repeating this process a succession can be maintained throughout the early Spring.

During Summer a shady border should be selected, and the soil raked fine and pressed firm. Sow the seeds and press down with a board, giving good waterings and protection with mats until the seed has germinated. To keep up a constant supply a sowing should be made every week.

American or Land Cress is most useful for mixed salads, and is quite easy to grow; sow the seeds from March onwards on a north border and

thin out to allow about four inches between each plant, using the outsido leaves only.

Water-cress can be grown in ordinary garden soil provided a shady border is chosen and copious waterings given. The seed should be sown in April, and the plants thinned out, leaving about six inches between each. Keep the plants pinched to prevent them from flowering. In Autumn till pans half full of soil and place some of the plants therein. Put them in a greenhouse and keep thoroughly watered, and a supply of good tender Water eress will be available all the Winter.

MUSTARD.

per quart 1s. 9d., per pint 1s. 0 2 | CHINESE. Fine salad variety WHITE For early salads

per quart 3s., pint 1s. 9d. 0

Cultivation .- The Common or White Mustard is much used for saladings, and is generally used with Cress. Out of doors, any cool, moist place is suitable for sowings, which should be made at frequent intervals during Spring and Summer. When sown under glass in Winter and early Spring, no better way exists than that recommended for Cress.

CAPSICUM.

Very valuable as decorative plants for the conservatory, besides being exceedingly useful for stews, pickles, &c.

Reduced from a Photograph.

LEEKS.

Cultivation.—The Leek is one of the mest nutritious vegetables cultivated, and although to produce exhibition specimens much care and attention is needed, still a thoroughly good crop for cooking purposes can be grewn quite oasily. Leeks are gross feeders and therefore require well tilled and liberally manured ground; the best plan is to give the land a thorough dressing of well-decayed manure in Antumn and trench it deeply, allowing it to remain rough for the Winter. The seed should be sewn in drills in March for the main crop, and eare must be taken to keep the ground thoroughly clean from the outset in order to give the seedlings a good start.

The easiest mode of culture is to dibble the young plants when about six inches high into holes made about twelve inches deep, giving occasional dressings of liquid manure. In September draw the earth round the plants. It is best to defer using Leeks till as late as possible in the Autumn, as the flavour improves.

When it is desired to grow Leoks for oxhibition, a good plan is to grow them in trenches in the same way as Celery, allowing two feet between the trenches; for this purpose the seed should be sown on a gentle hotbed in February, and the seedlings pricked off into boxes when big enough; it is important that the young plants be thoroughly hardened, as they will not stand coddling, but cold draughts should be avoided. When the plants have made about six inches ef growth, plant them into trenches, allowing about 15 inches between each plant; lift the plants out of the box with a trowel, to ensure getting a good let of roots. As the plants grow, the soil must be carefully and firmly worked round the roots and this process continued all the Summer at intervals, giving frequent waterings of liquid manure. Some growers place collars of brown paper round the stems before commencing to earth up the plants as this excludes all light and is a great aid to blanching.

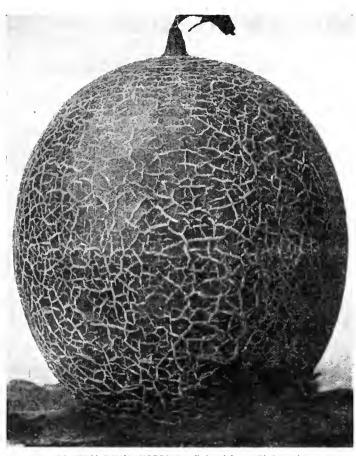

There is every encouragement to grow Leeks to a large size, as the flavour of the finest specimens is superior to the smaller ones. This is not so in most vegetables, but is certainly the ease with Leeks.

DANIELS' CHAMPION. This is undoubtedly one of the finest Leeks in cultivation. It grows to a large size, and is unsurpassed for exhibition purposes, having produced specimens with 18 inches of blanched stem, and of perfect shape. It comes early into use, and is of exceptionally mild flavour. It has obtained First Prize at a great number of Shows on account of its extraordinary clearness of skin and handsome appearance. We strongly recommend this variety to intending exhibitors, as one likely to give the greatest satisfaction ... per pkt. 1s. 2

OANIELS' ROYAL NORFOLK. Reduced from a Photograph.

NEW MELON, EMINENCE. Reduced from a Photograph.

MELONS.

Cultivation.—This delicious fruit is widely cultivated by all who can command sufficient heat. Molons are raised from seed in a similar way to Cucumbers, and their general treatment is much the same in the early

stages of their growth.

Sow the seeds singly in a pot of fine loam and leaf mould, and place on a hot-hed; as soon as the plants are in the rough leaf, pot on into six-inch pots; keep at an even temperature to avoid checking the plants, meanwhile have the beds prepared by forming a mound of good rich turfy loam and well-decayed manure on the border of the greenhouse stage, or in the frame. When planting make the soil quite firm round the stem, and give liberal waterings of clear water.

When the fruits are set, they should he thinned out to about two or three fruits on each plant, and occasional waterings of weak liquid manure given. As they ripen keep the bed a little drier; the temperature for Melon growing should be about 75° to 80° in the day, and 65° to 70° at night.

NEW MELON, DANIELS' ROYAL NORFOLK. This fine melon is the result of a cross between Hero of Lockinge and Read's Scarlet-Flesh. It is of strong habit of growth, a very free setter, bearing good useful sized fruit, oval in shape, of a dark green colour changing when ripe to a deep golden yellow, covered with a fine even net. The flesh is thick, of a lovely salmon colour, and of the most exquisite flavour, and without the green band next the skin so often met with in scarlet-fleshed .. 1s. 6d. and 2 melons

NEW MELON, KING GEORGE. A beautifully netted oval shaped variety. The fruit average three to four pounds in weight, and the flesh which is scarletorange in colour is exceedingly thick, juicy, and of excellent flavour. It is a free setter, and can be grown either with or without heat

NEW MELON, EMINENCE. A fine variety, raised by Mr. A. McKellar, The Royal Gardens, Windsor. Received an Award of Merit from the Royal Horti-cultural Society. The fruit is rather large, roundish oval, skin bright yellow and beautifully netted, flesh white, thick. Very melting and of delicious flavour.

IDEAL. This is undoubtedly a very valuable and desirable variety. It is the result of crossing Ingestre Hybrid and Royal Favourite. The llesh is thick and of a pale green colour, very luscious and of delicious flavour. The fruit is of medium size, rich yellow, and well netted. It is a free setter, and the fruit matures rapidly GUNTON SCARLET (S.F.). A very superior scarlet-lleshed Melon

GUNTON SCARLET (S.F.). A very superior scarlet-fleshed Melon of medium size, oval in shape, and finely netted. The flesh is very deep and the finest flavour of any Melon with which we are acquainted. Highly recommended Is. and *BLENHEIM ORANGE (S.F.). A grand scarlet-fleshed variety, very prolific and fine setter

DANIELS' GIANT WHITE. The

"I have been very lucky with the Seeds 1 purchased from you. I won three Prizes with your Giant Cos Lettuce." —Mr. R. SPOONER.

no tying ...

Cultivation.—It is often necessary that a practically continuous supply of Lettuces should be maintained throughout the year, and by a succession of sowings this may be done. For the earliest crop the seed should be sown in boxes under glass during January, and when big enough to handle prick out the plants about three inches apart into frames, there to be hardened off ready for planting out in a south border when the weather permits. Early in March a sowing may be made out of doors, preferably on a south border. Sow the seeds in drills, cover lightly with soil and protect from the birds if possible; when the plants are big enough prick them out six inches apart. By cutting some of the plants early space will be left which will allow the remainder to develop.

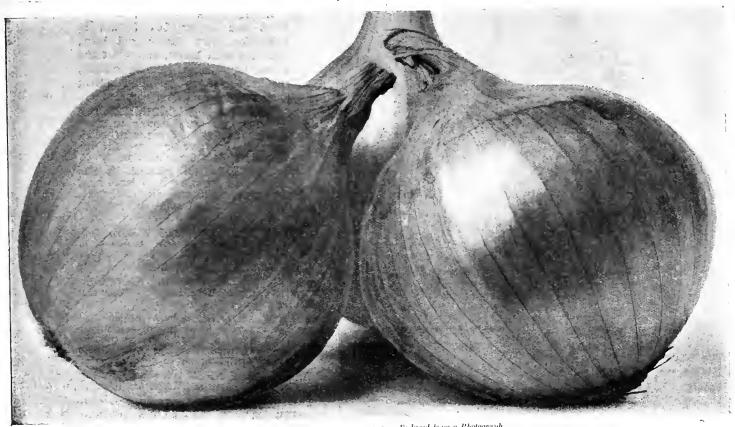

A succession of sowings may be made until the beginning of September, and the plants which are to stand the Winter should be finally pricked out in October, the most sheltered position in the garden being chosen. In a severe Winter it will be found necessary to give some protection to these plants: a slight covering of straw or bracken being suitable. To secure erispness and succulence in Lettuces, fiberal supplies of water should be given, and the hoc kept going regularly between the rows. For Spring, and Summer use we recommend in the Cos varieties, "Daniels' Giant White" and "Daniels' All Heart"; in the Cabbage varieties, "Daniels' Queen of Summer" and "Daniels' Continuity," the latter is a kind which very rarely runs to seed even in the hottest weather. For Autumn and Winter work "Daniels' Solid Brown" and "Daniels' Green Winter," both very hardy Cos Lettuces, and "All the Year Round" and "Large White Winter," and "Daniels' Mammoth Green" in Cabbage Lettuces, are to our mind the pick of the List.

 - 1 Tour Onions were the test in the Show."- Mr. G. PRHEY, Feeding.
- "I won Tiret Prize with Autaniz-scwn Onions grown from your Seeds."- Mr. W. TOLLEY, Witheridge.
 - "I have taken First Prize each year with your Onions." Mr. G. IVES, Rainham.

ONIONS FOR SPRING SOWING.

DANIELS' IMPROVED! WHITE SPANISH. Reduced from a Photograph.

DANIELS' IMPROVED WHITE SPANISH. This grand stock of Onion has been carefully selected by us for a great many years, and we have no hesitation in recommending it to our customers as one of the very best of its type; grows to a large size, very even, and it is unequalled for mildness of flavour. It is a very heavy cropper, a grand variety for Exhibition purposes, and is sure to give satisfaction.

Per pkt. 9d.; per oz. 2s.

per oz,	-5.	d.

DANIELS' BLOOD RED. Fine rich		
colour, very hardy	0	8

ZITTEAU GIANT YELLOW. A magnificent variety with fine yellow skin, and grows to a large size, the bulbs are of handsome appearance and excellent quality, remains sound till June.

May also be sown with advantage in Autumn . . . 0 6

STRASBURGH or DEPTFORD. Well known . . . 0 4

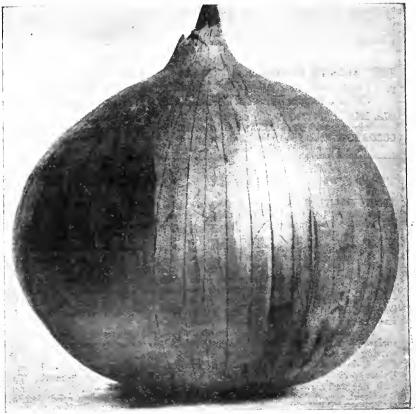

MIXED, all sorts for Spring sowing . . . 0 6

DANIELS' GOLDEN GLOBE. One of the finest types of Globe Onion in cultivation. The bulbs are of true globular shape with bright golden yellow skin; the flesh is very solid and of mild flavour. It produces a very heavy crop of fine, handsome bulbs, and is one of the best keepers. A most useful variety for all purposes.

Per pkt. 6d.; per oz. 1s. 6d.

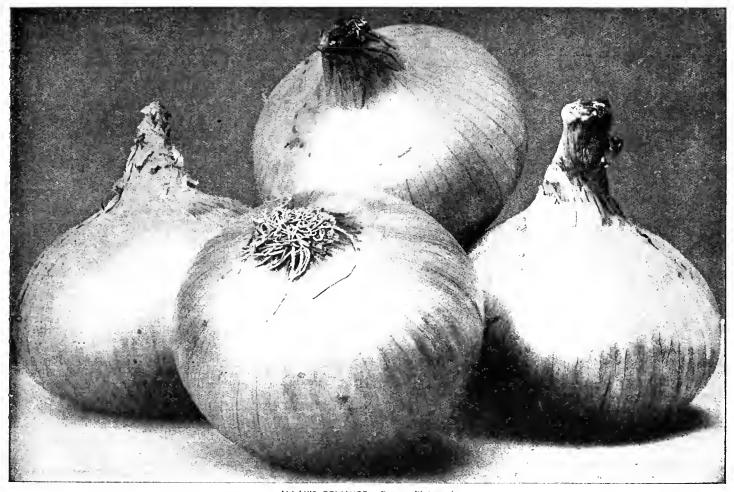

EVIDENCE OF QUALITY.

- " I sowed half an ounce of your Golden Globe Onion Seed at Springtime and I have taken up twenty stones of Onions."—Mr. J. RASPIN, Brigg.
- "I had a fine crop of Ouions this year from your Seed (Golden Globe); a packet produced five bushels on one rod of ground."—Mr. H. SIVIOUR, Mitcham.
- $^{\prime\prime}$ The Golden Globe Opion Seed I had last year was very good." Mr. H. CAUSTON, Mundford.
- "I cannot speak too highly of your Golden Rocca Onion." Mr. W. JONES, Poole.
- "I am pleated to tell you that I have taken First Prize two years running with your Golden Rocca Onion."—Mr. J. WOOSTER, Southall.
- "I took seven First and one Second Prize at Wymondham Show with Onions grown from your Seeds."—Mr. W. JOLLEY, Old Buckenham.
- "We have been shown a photograph of your **Onions** grown by Mr. Davis Ebley, from one omice of your Seed, and the total weight of **Onions** lifted out of the Seed was t cwt, 3 qrs. It lbs, most of which are four to five inches across. It is a remarkable crop in every respect."—**THE STROUD JOURNAL**.
- I took the First Prize at our Show with your Golden Rocca Onica. Have not been beaten with this variety." Mr. H. BRIDGES, Stockton

DANIELS' GOLDEN GLOBE

ONION-Allan's Reliance.

ALLAN'S RELIANCE, From a Photograph,

- ALLAN'S RELIANCE. This fine Onion has been grown and selected by Mr. Allan, of Gunton Park Gardens, for many years past, and, as will be seen from our illustration, is now brought up to the very highest type of a White Spanish Onion; besides being of splendid size and keeping quality, it is unsurpassed for exhibition. Per pkt. 6d.; per oz. 1s. 6d.

ALL THE YEAR ROUND. A new type of Onion growing to a large size, but having the advantage over many of the present exhibition varieties of being a grand keeper. The hnlbs ripen off well, and from seed sown early in Spring have been grown to over 14 lb. each. Per pkt. 6d.; oz. 1s. 6d. COCOANUT. This fine Onion has been grown to the weight of three pounds each. The skin is a very delicate pale straw colour, flesh white and mild; one of the best for exhibition.

pickling per pkt. 4d. 1 0	

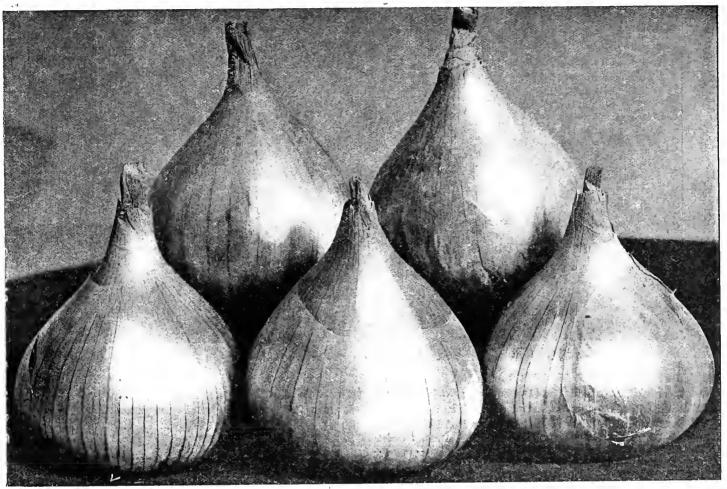

Cultivation .- There are few vegetable crops upon which so much care is expended as the Onion, and during recent years its culture has received much more attention than was formerly the ease. When the seed can be raised in January in heat (thereby obtaining an early start) it is possible to grow bulbs of equal size to those grown from seed sown the previous Autumn; about the last week in January is the time for the earliest sowing.

Sow the seed in boxes or pots in fine soil, a good mixture being two parts of good loam to one part of decomposed manure, or leaf soil. When the young plants are about three inches high prick them off into boxes, and give all the light possible, gradually admitting air, and hardening as the days lengthen, until the time arrives for planting out in the heds about the middle of April. The earliest sowing out of doors should be made in February, and the main sowing of all kinds in March.

The greatest earo should be taken in preparing the Onion bed, the ground being thoroughly raked over, all the stones cleared off, and a perfectly fine surface obtained and the soil made quite firm. Sow the seeds very evenly in shallow drills about eighteen inches apart and carefully cover the seed by putting the soil from the side of the drills with the feet. The whole hed should then be well trodden down both down the bed and across as well, after this, again rake the soil level and little further work is necessary beyond keeping the hoe going and thinning out the plants when the time arrives. Unless specially fine bulbs are required it is not advisable to thin too much. To provent an attack of Onion Maggot in a dry season, a good watering with lime water will be found to be of much service.

Great care is necessary in harvesting the Onion crop. It is a good plan to bend over the tops of the plants in August by going over the plants individually, this will assist the ripening of the bulbs. Onions require to be thoroughly ripened before being taken off the ground and should, therefore, be pulled about the middle of September and turned over on the ground every two or three days for a fortnight, when they should be gathered into an airy shed in readiness for roping together, this being the best method of storing them for Winter use.

ONIONS FOR AUTUMN SOWING.

DANIELS' GOLDEN RCCCA. Reduced from a Plotograph.

DANIELS' GOLDEN ROCCA. One of the largest and finest Onions ever introduced. Fine globular shape, golden yellow skin, mild flavour, and with careful cultivation comes equal to the imported Portugal Onions, and keeps sound till June. This variety is the best exhibition kind known, and has obtained more Prizes than any other Onion. It sown in Antumn, and kept under first-class cultivation, will grow bulbs two to three pounds each; may also be sown in Spring, and will produce some fine bulbs.

Per packet 6d.; per ounce 1s. 6d.

PLANTS.

Strong Autumn sown, to plant out for show purposes, can be supplied in Spring of the following kinds only:

White Elephant Tripoli, Golden Rocca, Giant Rocca
Ailsa Craig, and Zitteau Giant Yellow. All Carriage Paid

The Autumn sowing of these, which offers many advantages to the cultivator, has very much grown in favour of late years. When sown in Autumn, Onions grow to a much larger size, and are milder in flavour than those sown in Spring, especially when transplanted, and being much less liable to attack from fly, are rarely destroyed by maggot. They are besides exceedingly valuable for the supply of fresh green Onions in early Spring which can always be relied on.

Cultivation.—For securing specially fine Onions there is no doubt that it is much better to sow the seed in the Autumn. The ground should be prepared as for the Spring crop, except that the drills should be made a little deeper. Sow the seed any time from the middle of July to the end of August and treat in the same manner as advised for Spring sowing. Keep the ground clear of weeds, and give good soakings of water, if the Autumn is a dry one. If cooking size only is needed it will merely be found necessary to thin out the Onions and a good crop will be obtained, but if exhibition bulbs are required, the strongest must be selected in Spring, lifted carefully with a trowel, and transplanted nine inches apart on to a specially prepared bed of rich soil. Water thoroughly, at the same time making the soil firm round the bulbs. Keep the hoe going and excellent Show specimens should be produced without further trouble.

Potato Onions are a very useful crop and produce a heavy yield of underground bulbs; they are grown from bulbs (see page 52) and should be planted out in February in rows about 1½ feet apart, allowing ten inches between each bulb in the row.

Draw the earth round them as for Potatoes and eather the eron in June

PARSLEY.

DANIELS' QUEEN OF THE PARSLEYS GROWING AT OUR SEED GROUNDS. From a Photograph.

DANIELS' QUEEN OF THE PARSLEYS. An extra selected stock carefully grown on our own Seed Farm. most useful for garnishing, and extremely valuable as an ornamental plant for the flower-border per pkt. 4d. 1 () GIANT CURLED. A very handsome variety, leaves finely curled, grows to a large size, and is very ornamental; this is the best sort to grow where Parsley is required in large quantities per pkt. 3d. 0 9 COVENT GARDEN GARNISHING. A splendid variety, beautifully curled EXTRA-FINE CURLED. Fine for garnishing

Cultivation.—Parsley being a deep-rooting plant pays well for liheral cultivation; it likes a good rich soil in a cool but not too shady position. Parsley is often grown as an edging to other kitchen garden crops and has a pleasing effect when thus used, and as it is in demand the whole year round it is an excellent plan to make a succession of sowings during the year to ensure a continuous supply. Make the first sowing in a box in February and when the plants have been gradually hardened off they should be planted out during April in the permanent horder, allowing about twelve inches between

cach plant. Another sowing at the end of March will he of value for a succession.

For a Winter supply, a sowing should be made in June or July, choosing a sunny aspect on a south border. The plants should be thinned out to prevent over-crowding; those taken out may be potted up and placed in a cold frame or greenhouse and will yield an excellent supply of leaves for Winter garnishing. In the event of severe weather it will be found advisable to cover the outside beds with mats or an old frame, and a sprinkling of soot in the early morning during the growing season will be found to have an excellent effect.

HERBS (Sweet and Pot).

Per packet 3d. Per dozen packets, 2s. 6d.

PARSNIPS.

DANIELS' IMPROVED HOLLOW CROWNED. Reduced from a Phetograph.

DANIELS' IMPROVED HOLLOW-CROWNED. A finely selected stock of the Hollow-crowned variety. It grows to a very large size without becoming coarse. The roots are of grand symmetrical shape and very clear in the skin. It produces a heavy crop of even-sized Parsnips, and is the best variety for exhibition purposes per lb. 6s.

per lb. 5s.

Cultivation.—Parsnips are amongst the most nutritions of vegetables, and are quite easy to grow; a good loamy soil free from stones heing the most suitable. Have the ground thoroughly trenched (at least two feet deep) in the Autumn, and give a good dressing of farmyard manure, leaving it rough for the Winter. Early in February the hed should be levelled, forked down, and the seeds sown in drills about 1½ feet apart; thin the young plants out to about 12 inches apart as soon as it is possible to handle them, and he sure to keep the ground thoroughly clean between the rows by frequent hoeing.

When specimen roots are being grown for exhibition, holes should be bored three or four feet deep with a crowhar, and filled with specially mixed oil, leaf mould, and wood ashes; sow four or five seeds in each hole and thin out the plants, leaving one to each; weed the ground carefully and apply a sprinkling of soot to keep away pests.

Parsnips are always better when allowed to remain in the ground and lifted when required for use, but when it is necessary to lift and storethem, they should be placed in dry sand in a dark shed or cellar.

"I send you a Photo of your Improved Hollow-Crowned Parseip. I have only been beaten for First Prize once during the four years I have dealt with your Pirm. I hope to be I list at Shrewsbury. My Parseips run to 38 inches long and 11 inches round the crown."—Mr. F. COCK, Stafford.

"I consider your Improved Hollow-Crowned Parsnip excellent, as I have taken First Prize every year."—Mr. G. CLISSOLD, Bromsgrove.

SPINACH.

LONG STANDING. A most valuable variety for Summer use, as it stands the dry weather and keeps longer fit for use than any other sort per qt. 2s.; per pt. 1s. 3d. 0 MONSTROUS ITALIAN or VIROFLAY. Large and superior; leaves dark green, and extremely thick and fleshy .. per qt. 2s.; per pt. 1s. 3d. 0 4 NEW ZEALAND. Large and succedent .. PERPETUAL or SPINACH BEET. Produces an abundance of green leaves close to the ground, as soon as these are cut fresh leaves appear, producing a supply during the Autumn and Winter
PRICKLY, NEW GIANT-LEAVED. A great improvement on the ordinary winter spinach. The leaves are much larger and of greater substance. .. per qt. 2s.; per pt. 1s. 3d. 0 4 and it remains fit for use for a much longer period .. per qt. 1s. 9d.; per pt. 1s. 0 3: PRICKLY. Ordinary stock for winter use per qt. 1s. 9d.; per pt. 1s. 0 3 ROUND. For Summer use; hest for general crop ...

Cultivation,—All kinds like a good rich soil; for the Summer Spinach select a warm border and sow the seeds in rows, where a little shade can be iven; it is often grown between the rows of Peas and Beans. It is important that the plants should be thinned out so as to allow plenty of room for the to develop, and that the erop should he kept well gathered while young.

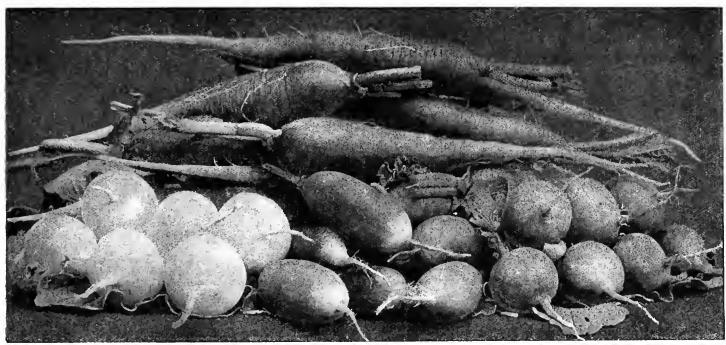

Winter Spinach should be sown in July or August in drills one inch deep, and twelve inches apart in a well-drained border, care being taken to this out well, otherwise the leaves will decay, as they will also if grown on heavy water-logged soil. New Zealand Spinach is a useful vegetable for the Summer, but will not stand the frost. Sow it on a warm border in April, and thin out the plants to about two feet apart.

[&]quot;I staged six of your Improved Hollow-Crowned Parsnips at ear show, and I hapleased to say that I took First Prize; the weight of them being just over 40 lbs., and the length varying from 2 ft. 6 ins. to 2 ft. 9 ins."—Mr. H. CAPLEN, Peter-Rebt.

[&]quot;The Parsnips turned out very fine last year." -- Mr. T. PICTON, Tree by thiw.

[&]quot;I won First Prize with your Parsnips this year" Mr. G. BRIMBLECOMBE. Disheombe

RADISHES.

WHITE TURNIP.

OLIVE-SHAPED MIXED

DANIELS' BEST OF ALL. FRENCH BREAKFAST,

DANIELS' EARLY SCARLET TURNIP.

LONG VARIETIES.

DANIELS' BEST OF ALL. A new and distinct long variety; colour, beautiful bright scarlet, flesh pure white, very tender and crisp. It comes into use very early; and will be found a most useful variety, its bright colour making it very attractive both for the table and market purposes .. per pint 2s. 6d. DANIELS' LONG WHITE. A new variety of excellent quality. It is the same shape as the Wood's Frame, and pure white in colour. The flesh is exceedingly firm and crisp, and it keeps solid and in good condition a long time DANIELS' LONG SCARLET. OLIVE-SHAPED WHITE. Of quiek growth, mild and crisp, handsome shape per qt. 3s.; per pt. 1s. 9d.

"I took eleven Prizes last year at our Show for Vegetables, all grown from your Seeds."-Mr. C. F. FRANKLIN, Harrow-Weald.

per qt. 3s.; per pt. 1s. 9d.

TURNIP VARIETIES.

DANIELS' EARLY SCARLET TURNIP. A very early variety, the roots are firm, solid, and of true globular shape. Colour, rich glowing crimson scarlet. This is unquestionably the earliest forcing Radish extant. It grows very rapidly, is of delicate flavour, and is fit to use in three weeks from time of sowing per pint 2s. 6d. 0 6 CRIMSON GIANT. A new Radish of fine colour,

and the same shape as our Early Scarlet Turnip, but attains more than twice the size in the same period of growth; it also remains quite firm and crisp for a much longer time

SPARKLER (new). A quite distinct variety, the upper half of the root is bright scarlet and the lower portion pure white. The two colours are sharply defined and do not merge into each other. Has a most dainty appearance on the table

TURNIP, Scarlet, White-tipped. Delicious and handsome

TURNIP, Scarlet (For Summer)
,, White and quantum use)

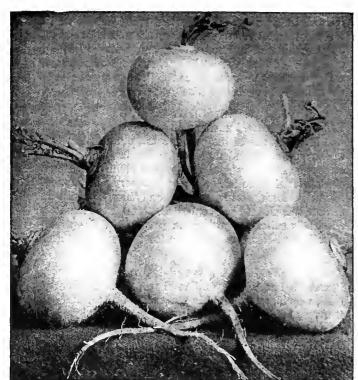

per pint 1s. 9d. 0 4
qt. 2s. 6d.; pt. 1s. 6d. 0 3

WINTER RADISHES.

Cultivation.—The Radish is one of the most popular of all salads, and to be crisp and mild in flavour should be quickly grown. It requires a good rich soil and liberal supplies of water during hot dry weather. Care should be taken in making the sowings to ensure a continuous succession rather than a great quantity at one time. The earliest sowing (for which our new variety, "Best of All," is most suitable) should be made between the rows of early Potatoes or other vegetables grown in frames on the hot-bed. Be sure to admit plenty of air as they will not bear excessive heat.

From February onwards sowings may be made about every fortnight in a warm sheltered bed out of doors, making provision for covering the beds with mats or straw on cold nights. This covering must always be removed in the day-time. It is most important, however, that protection from birds be made in the day-time, and fish netting is generally used for this purpose. In the middle of Summer a north-east border will be found a most suitable position for Radishes. Sow the seed broadcast and evenly, so that they are not too crowded. For Winter work the varioties "Chinese Rese" and Black Spanish" are the best; they should be sown in August and the plants thinned out about four inches apart.

GARDEN TURNIPS.

DANIELS' IMPROVED SNOWBALL. Reduced from a Photograph.

YELLOW-FLESHED VARIETIES.

DANIELS' GOLDEN GEM. A distinct variety. The top is small and neat; the roots are very handsome, with very fine tap-root.

The skin and flosh are of a rich golden-yellow, and of excellent quality ... per pint 3s. 0 GOLDEN BALL. Fine stock. ... per pint 1s. 6d. 0 GRANGE JELLY. Fine for late sowing ... per pint 1s. 6d. 0

Cultivation.—This most wholesome vegetable is a lover of moisture, and to be crisp and juicy (as it should be) must be grown quickly and not hecked in its growth. Choose good rich soil which has been dug over some time previously, and if possible, in a slightly shady position, as during the Summer months Turnips become stringy and hard if exposed to the lot sun.

For the first crop sow Daniels' "Snowball" on a very warm border early in March, and a succession of varieties onwards until July. Thin out the plants when in the seed leaf, leaving the single roots twolve inches apart. Give occasional dustings with wood ash and seet in the early morning to ward off the deadly Turnip fly.

For Autumn and Winter use sow in August and September either broadcast or in rows. Keep the hoe going and all weeds cleared off to hasten the growth and ensure crisp tender roots.

"I took lirst Prize with your Improved Snowball Turnip, also First Prize with your Alsa Craig Onion. I have been successful in winning several Prizes."—Mr. J. GODDARD, Kessinghard.

DANIELS' CREEN TOP STONE.

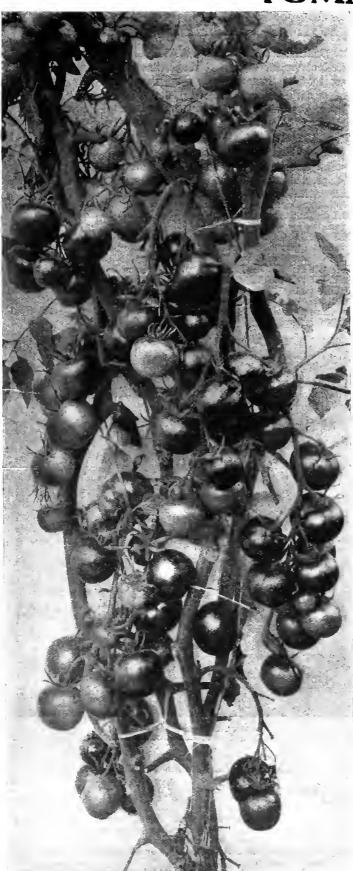

SCORZONERA.

RUSSIAN IMPROVED	 	 rer pkt. 4d. 1	
COMMON	 	 ., 3d. 0	

Cultivation.—Salsafy is a vegetable which deserves to be more grown, as it has quite a rich and distinct tlavour. Being a deep rooting plant, it must have well-worked land. The seed should be sown early in May in drills about fifteen inches apart, and the plants thinned out to about nine inches in the row. If specimen roots are desired for exhibition, they may be grown in holes made by a crowbar and filled with fine soil as recommended for Europias and Beetroot; a liberal supply of water should be given in dry weather and the soil kept loose between the rows by hocing during the Summer. Salsafy should be lifted and stored in dry sand in a cellar for Winter use.

Scorzonera is a vegetable resembling Salsafy, being purple in colour. It requires similar treatment, but is somewhat hardier and requires a little

TOMATOES.

TOMATO DANIELS' KING GEORGE V

Reduced from a Photograph

DANIELS' KING EDWARD VII. This fine Tomato is a decided advance on most existing varieties, and certainly one of the best yet sent out. It is a free setter, and an abundant bearer. The large, splendidly coloured fruits, which are produced in handsome clusters of eight to ten or twelve, are very deep, almost round in form, and very solid and heavy, whilst in flavour it is all that can be desired. This fine Tomato is admirably suited for growing in pots, and will be found a really first-class variety, alike for the market grower or amateur exhibitor

AILSA CRAIG. A new variety of great excellence, bearing a heavy crop of fine shaped, grand coloured fruit, which are produced in great ropes and trusses. It is a very free setter, bearing up to eight and ten bunches on a plant. A good sort for pot culture and exhibition work

wiseTon Prolific (new). A grand variety raised by Mr. Musk, The Gardens, Wiseton Hall. The fruit, which are of good size, are of grand colour, very firm, and of excellent flavour. It is enormously prolific and will be found first-class for exhibition

Cultivation.—One of the chief things which has contributed to the great popularity of the Tomate is the fact that it is so very easily grown. It is now generally recognised that Tomatees can be quite successfully cultivated without such heavy dressings of manure as were used at outime, although there are certain periods when good liberal dressings of manure are necessary; but when the plants are young they do not need it

For the earliest Spring crop the seed should be sown in January or early in February in pots or pans of light rich soil, and these should be placed on a shelf in the greenhouse; the vessel should be covered over with a sheet of glass to hold the moisture and kept at an even temperature until the seed has germinated. As soon as the plants have formed the seed leaf, have them potted off singly into three-inch pots and grow them on in a warm house, potting on into six-inch pots later, in which size they should remain until permanently planted out in the horders, or potted into the fruiting pots.

Many people prefer to grow their early crops in pots ten inches to twolve inches in diameter, claiming (we believe rightly) that they are better able to attend to the careful watering of the plants and thus avoid any injury to the roots. The treatment of young Tomato plants is prefty much the same as would be given to early Cucumhers, they should have a temperature of 60° during the day, and not less than 50°—55° at night. For a main crop sow the seed in February or March, then transfer into pots as hefore advised; it is of great importance that the plants he kept sturdy and therefore air should he given on all favourable occasion. The drainage of both the pots in which the young plants are grown on and the borders or hoxes in which they are to fruit should he very carefully locked to, so as to allow of their receiving copious supplies of water, especially during the fruiting period. When planted out in the greenhouse border, the plants should he placed ahout 18 inches apart and supported either hy means of a stake or tied up with soft string to the roof, all sidegrowths should he cleared off as they appear, and only the main stem allowed to grow away, this heing stopped when it reaches the glass, or when three or four trusses of fruit have been set.

The best soil for Tomatoes is a good rich loam to which has been added a light dressing of farmyard manure, say one-fifth of the hulk; many growers do not put any manure in the soil at the time of planting, leaving the feeding until the first truss of fruit has set, when they apply regular dressings of artificial manure, or give a mulching of well-decayed manurand water the same thoroughly in. In no case must the manure used baken from a heap that is heated or the result will be disastrous.

TOMATOES—RED VARIETIES.

THE DANIELS. The fruit are of good size, rather		
above the medium, smooth, brilliant scarlet in colour,		
of beautiful form, exquisite flavour, and remarkably		
solid. It is a robust grower, and a marvellously pro-		
fuse and continuous bearer. A first-class variety for		
cultivation under glass	1	0
*SUNRISE. This grand variety has received a First Class Certificate from the Royal Horticultural Society for its numerous good qualities. It is very early, a free setter, and enormously prolific, bearing ten to eleven even sized fruit in one bunch.		
Colour rich scarlet. It is equally prolific either in the open air or under glass	1	()
a beautiful glossy scarlet colour; obtains first prize wherever exhibited	1	0

VEGETABLE MARROW and SQUASH. Various sorts mixed	., () 3
Cultivation Vegetable Marrows are easy to grow and it is	71000	iblo

Cultivation.—Vegetable Marrows are easy to grow, and it is possible in every garden to find a corner in which to grow two or three plants; they are often planted on old heaps of refuse, etc. It is not, however, essential that they should be planted on manure beaps, as they will grow quite well in the open garden in a hole which has been well manured, and in fact, they continue to fruit longer when so grown.

Continue supplies of water are necessary for Vegetable Marrows

they continue to fruit longer when so grown.

Copious supplies of water are necessary for Vegetable Marrows, and
the fruits should be cut when young, as otherwise they become tough,
and the plants cease bearing sooner. Sow the seeds singly in small pots,
and plant out when about a foot high, giving protection for the first few
nights. Another plan is to sow the seeds in the mound, where they are
to grow, and to cover the plants with a hand-light, or some similar covering
nutil frost has disappeared. Frequent waterings with liquid manure at
the time of fruiting will add much vigour to the plants and size to the
fruits.

SEED POTATOES.

For many years past we have devoted great attention to the cultivation and selection of our choice stocks of Seed Potatoes, and have been fortunate in introducing to the public several fine varieties of our own raising that have attained to great popularity. By adopting this system, and by adding to our collection the finest varieties raised by other growers, we are enabled to offer a really first-class selection of the best kinds. The past season has been on the whole a favourable one for potatoes, the Maincrop and late varieties have especially yielded well; on the other hand, owing to the dry weather in June and July some of the earlier kinds are rather scarce, and we strongly recommend early orders for these to prevent disappointment. Our leading varieties such as Duke of York, Sensation, Express, Early Puritan, Factor, and a few others have been grown in Scotland, and we are able to offer fine healthy stocks of these. We have also great pleasure in introducing several new varieties of great merit, which we can strongly recommend for their heavy cropping and fine cooking qualities, and will also be a valuable addition to the exhibition table.

NEW AND SELECT POTATOES FOR 1914.

- DANIELS' NORFOLK BEAUTY. (See illustration opposite page.) A fine strong growing Maincrop variety of handsome appearance, producing a very heavy crop of even-sized oval-shaped tubers, with white skin and flesh. It is very clear in the skin with shallow eyes. The cooking quality is excellent. On account of its handsome appearance it will prove a great acquisition as an exhibition variety.

 Per lb. 6d.; 7 lb. 3s.; 14 lb. 5s.
- proved itself a very heavy cropper. It is a handsome second early variety, with white skin and flesh. The haulm, which is strong and vigorous, grows about 2—2½ feet in height. The tubers, which are very handsome, are oval shaped, somewhat inclined to kidney, with finely netted skin. It is an extraordinary cropper, producing a heavy weight of fine shapely tubers of good size, with very few small. A grand sort for Exhibition, and of the finest table quality.

 Per lb. 6d.; 7 lb. 3s.; 14 lb. 5s.
- DANIELS' DREADNOUGHT. A fine Maincrop Kidney of handsome appearance and great productiveness, and has proved itself up to the present a great disease resister. During the wet Summer of 1912 it produced fine crops where other sorts failed; it is of robust constitution, and the tubers are of fine shape and of most excellent table quality; a useful exhibition sort.

 Per 14 lb. 3s.; 56 lb. 10s. 6d.
- KING GEORGE V. A very useful Maincrop variety of recent introduction; it is an enormous cropper and of fine table quality. The tubers, which are kidney-shaped with white skin and flesh, are very handsome, with a finely netted skin. A fine exhibition sort.

 Per 14 lb. 3s.; 56 lb. 10s. 6d.
- SUMMIT. A late White Kidney somewhat oblong in shape and of strong, robust constitution. The haulm is very strong and upright, with white bloom. It is a very heavy cropper, many roots producing twenty tubers of large size with very few small ones. It is without doubt one of the best late varieties of recent introduction. Per 14 lb. 3s.; 56 lb. 10s. 6d.
- ARRAN EARLY. A very handsome early White Kidney of great productiveness and fine table quality, the eyes are few and nearly even with the surface; it will be a useful sort for exhibition purposes.

 Per 14 lb. 3s.; 56 lb. 10s. 6d.

EVIDENCE OF QUALITY.

- "Norfolk Beauty, in spite of the season here, turned up splendid, quite free from disease and a wonderful cropper, perfect in shape, very shallow eye, with all the good qualities of a Mainerop variety; likewise for exhibition and a table potato 1 consider it a grand introduction, and will_not_be long in making headway."—Mr. H. GANDY, Gardener to the Marquis of Bath.
- "Daniels' Surprise is well-named. It is a wonderful cropper, perfect in shape, eyes flat on the surface, with a fine russety skin; a model potato for Exhibition purposes. I have tested it—roasted, steamed, and baked, and in each case it was excellent."—Mr. B. ASHTON, Lathou Cardens
- "Daniels' Surprise yielded a heavy crop of even-sized, shallow-eyed, shapely tubers of the finest cooking quality. I consider it a fine addition to the list of second early varieties."—Mr. WM. LOW, Euston Hall Gardens.
- "Daniels' Surprise produced a heavy crop of fine tubers of excellent shape and finest table quality, and were free from disease."—Mr. WM. ALLAN, Gunton Park Gardens.
 - "I have shown your Surprise Potato and obtained two First Prizes; they have done very well."-Mr. W. F. WILLIAMSON, Hucknall.
- "The Seeds I had from you in the Spring did well I took First Prize with your Surprise Potato, and three Prizes for other things."—Mr. J. MORGAN, Ferndale.

TWO-SPLENDID-NEW-POTATOES

TWO GRAND FIRST EARLY POTATOES Daniels' Defiance Ashleaf. Daniels' Duke of York.

POTATOES.

FIRST EARLY VARIETIES.

- DANIELS' DUKE OF YORK. This grand variety still holds its own as one of the best heavy-cropping Earlies in cultivation. In habit of growth, it is very compact, the haulm being only a foot high. The leaves are smooth and of a rich glossy green colour, whilst the tubers cluster compactly round the stem, and are very easy to raise. The tubers are large, oval, smooth and handsome, and distinct in appearance, the eyes are few and quite even with the surface, ensuring a minimum of waste; the flesh is dry and mealy when cooked, and of the most excellent flavour. (See illustration, opposite page.) Scotch grown Secd.

 Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s.
- DANIELS' DEFIANCE ASHLEAF. This variety has now been several years before the public and still holds its place as one of the best of the first earlies, and in most seasons it can be lifted before the disease makes its appearance. It is one of the heaviest cropping varieties of this class, producing a full orop of good sized tubers of first-class table quality, having the exceptional flavour found only in the best Ashleaf sorts. (See illustration, opposite page.)

 Per 14 lb. 3s. 6d.; 56 lb. 12s.
- MYATT'S ASHLEAF, IMPROVED. This will be found a heavier and more reliable or opper than the old variety, and of exceptionally good table quality.

 Per 14 lb. 3s.; 56:lb. 10s. 6d.
- EARLY ASHLEAF KIDNEY. Useful variety.

Per 14 lb. 3s.; 56 lb. 10s. 6d.

- EXPRESS. A fine early White Kidney of handsome appearance and excellent cooking quality, and is at the same time a very heavy and sure cropper; has proved one of the best during the past season. (Scotch grown Seed.)
 - Per 14 lb. 3s.; 56 lb. 10s. 6d.; cwt. 18s.
- EARLY PURITAN. A well-known variety of great excellence, which still maintains its reputation amongst the early varieties for its fine cropping and good cooking qualities. First-class Certificate, R.H.S. (Scotch grown Seed.)
 - Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s.
- MAY QUEEN. A first early White Kidney of exceptional productiveness. The tubers are kidney shaped, with white skin and flesh, and of first-class table quality. This is one of the best of the early kidney varieties. (Scotch Seed.)

 Per 14 lb. 3s. 6d.; 56 lb. 12s.

per 14 lb. per 561b. EARLY ECLIPSE. A handsome first early Whito Kidney of great productiveness, with white skin and flesh, it cooks well early and late, per ewt. 15s. 2 6 8 6 stitution and a much heavier cropper, and of first-rate cooking quality.

SIR JOHN LLEWELYN. This splendid White Kidney, in consideration of its earliness, heavy cropping, good quality, and disease resisting properties, has become highly popular. The tubers are of good size and shape, and when cooked, white and floury.

Award of Merit, R.H.S. This is a really first-class early Potato... per cwt. 15s. 10 6 2 6. 8 6 SHARPE'S VICTOR. A specially selected and improved stock of this well known early variety, of fine appearance, and producing 12 0 twice the weight of the old sort SOUTHERN QUEEN. An carly white kidney of handsome appearance, the tubers being of beautiful kidney shape; it is an abundant 10 6 croppor of the best table quality

SECOND EARLY VARIETIES.

- DANIELS' DUCHESS OF NORFOLK. A grand variety of handsome appearance and a heavy cropper. It is a second early, growing about 2 feet high, the foliage being quite distinct. The tubers, which are pebble-shaped or round, with shallow eyes, are of good size, producing a nice even crop of marketable tubers with a minimum of small. The skin and flesh are white and of the finest table quality; very useful for exhibition.

 Per 14 lb. 3s.; 56 lb. 10s. 6d.; cwt. 18s.
- DANIELS' PRINCE EDWARD. This grand new Potato is a seedling from our celebrated Duke of York, crossed with The Factor. It is a second early of enormous productiveness, having produced 32 times its own weight. It shows the character of both its parents, and is a nice upright grower (about 2 feet in height) with strong leathery dark green foliage and white flowers. The tubers, which are kidney-shaped, with clear white skin and flesh, are of the finest table quality.

 Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s.

a. d. ۴. 8 EARLY ROSE. A well-known variety suitable for light sandy soils, of full table quality (scarce) .. 6 EARLY WHITE HEBRON. A well-known variety of fine cooking quality

BRITISH QUEEN. A second early variety of great merit. The skin and flesh are white, and of extra fine table quality; this, combined per cwt 15s. 8 6 with its great productiveness and good keeping qualities, make it a most desirable variety (Scotch Seed) 6 8 6 BEAUTY OF HEBRON. A well-known variety of good table quality SNOWBALL. The tubers are almost round in shape, with white flesh and a finely netted skin; it is of excellent cooking quality, and 2 6 6 6 8 6

A GRAND NEW POTATO, ARRAN CHIEF.

NEW POTATO, ARRAN CHIEF. From a Photograph.

ARRAN CHIEF. A distinct new Main Crop variety of Scotch origin. The tubers, which cluster compactly round the plant, are very numerous, of good size, nicely rounded, and have comparatively shallow eyes; they are of the very best quality, and make a splendid table Potato. The majority of the tubers are of good marketable size, with very few small, whilst its handsome shape will make it a fine addition to the exhibition table. During the past season it has produced over 17 tons per acre under ordinary cultivation, with hardly any diseased tubers.

Per lb. 6d.; 7 lb. 3s. 6d.; 14 lb. 5s.

MAIN CROP VARIETIES.

CLOSEBURN CASTLE (New). A most useful variety, of thick kidney shape, somewhat inclined to oval, with beautifully white flesh of fine cooking quality. It is a huge cropper, producing a fine lot of marketable tubers, with very few small.

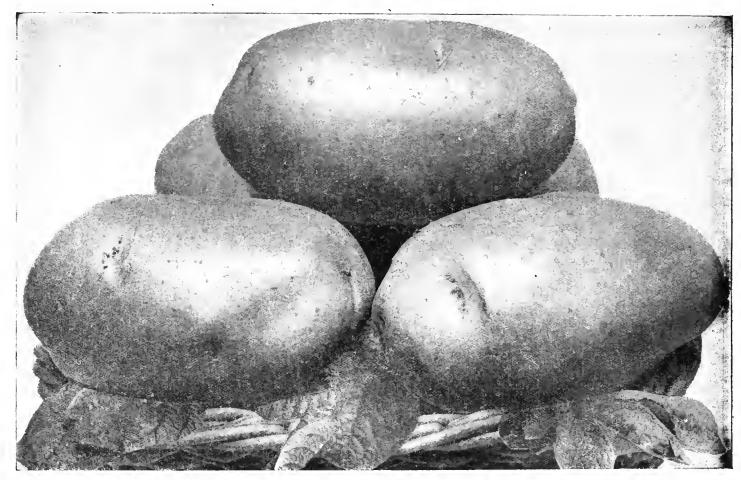

Per 14 lb. 2s. 6d.; 56 lb. 8s 6d.

				per 50	
KING EDWARD VII. A very fine Main Crop variety; the haulm grows to the height of two feet and is fairly rol	oust, producing a larg	0 8.	d.	٩.	₫.
crop of handsome tubers. The skin is white, with a blotch of pink about the eyes, which gives it a very ple	pasing appearance. I	.t			
is a good cooker and free from disease; for exhibition it is first class. Scotch seed	per cwt. 14		6	8	G
RADIUM. The tuners are eval in shape, with beautifully netted skin, and of the finest table quality. The haulm	which grows to abou	$\cdot \mathbf{t}$

[&]quot;I have grown over 50 varieties of potaties this season, and the best of the lot is area Chief; it crops well, cooks well, and is a grand exhibition sort, and one you can resummend with the greatest confidence."—Mr. A. WOODHOUSE,

The Gardens, Letheringsett II ill.

A GRAND NEW POTATO. THE PREMIER.

NEW POTATO, THE PREMIER. Reduced from a Photograph.

THE PREMIER. A grand new Main Crop Kidney of exceptional qualities. The tubers are white, thick kidney shaped, very handsome in appearance, and of the finest cooking quality. It is of strong robust constitution, with dark foliage and mauve flower. It is an enormous cropper, and during the very dry season of 1911 produced at the rate of 16 tons per acre under ordinary cultivation; in the past season it has again produced an exceptionally heavy crop practically free from disease. Without doubt a fine addition to our exhibition varieties, and can be strongly recommended.

7 lb. 1s. 9d.; 14 lb. 3s.

DANIELS' SENSATION.

SENSATION. From a Photograph

This grand Main Crop Potato is one of the heaviest-cropping and best varieties we DANIELS' SENSATION. have ever grown. It is of a good, robust constitution, the haulm growing about two feet high. The tubers are of good size, thick pebble-shape, with very shallow eyes, almost level with the surface; the skin is white and slightly netted—a sure indication of good cooking qualities—the flesh being white, mealy, and of the finest texture. Its splendid cropping and good culinary qualities, combined with its very handsome appearance, have made this variety a great favourite alike with the cook Per 14 lb. 2s. 6d.; 56 lb. 8s. 6d.; cwt. 15s. and exhibitor. Seed direct from Scotland.

HINTS ON POTATO CULTURE.

Cultivation.—The varieties quoted in our list are the hest in cultivation.

The varieties quoted in our list are the hest in cultivation.

Totatoes deteriorate if repeatedly saved from the same soil and district.

For those growing for exhibition it is necessary to select varieties which are not only handsome in appearance, but also of known good quality for cooking purposes, such as "Duke of York," "Arran Chief," "Sensation" and "The Premier."

For early work, "Duke of York," tho well-known variety introduced by ourselves is still pre-eminent, and the increasing demand for this kind proves its superiority over all others as a first early.

Much depends upon the selection and treatment of the "sets"; it is therefore necessary to secure good moderate sized Potatoes which should be set up on ond in shallow hoxes or trays, and allowed to sprout hefore heing planted, as when this is done much advantage is gained hoth in the development of the plants and in the weight of the crops. Potatoes like a good open position in the garden, and the most suitable soil is a medium to light one in a well-drained position; the ground should be deeply dug and manured in the Autumn. Where stable manure is available a good dressing should be given at the time of planting, placing a layer on the hottom of the trenches: well-decaved leaf-mould, or the remains of an old mushroom

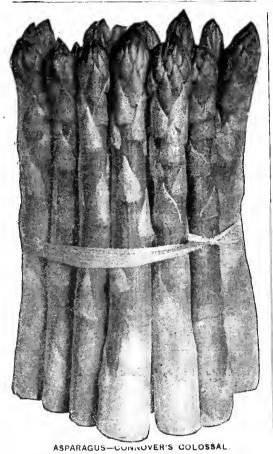

should be given at the time of planting, placing a layer on the hottom of the trenches; well-decayed leaf-mould, or the remains of an old mushroom bed are also excellent for this purpose.

When planting it is important that an abundance of room ho left hetween the rows and the sets in the row; allow a distance of two feet between rows for the early, and three feet for the late strong-growing sorts, and twelve to eighteen inches hetween the sets in the rows. Where the land is naturally low and wet it is a capital plan to elevate the rows by forming ridges and so planting the sets on about a level with the natural soil; it is

also good to keep the surface soil constantly stirred with the hoc until the earthing up commences. Whon the young growths hegin to push through the soil care must be taken to protect them from the frost by continually earthing up the soil round them (neglect of this has often resulted in the loss of a complete crop of Early Potatoes), and when it is desired to grow exhibition specimens only, one haulm should be left to a plant, all the weakest ones being drawn out as they appear. Slight dressings of soot or of "Norwich Fertilizer" during the growing season will be of much advantage. Immediately the growth is completed, the crop should be lifted; choose fine weather for the work and storo thom after having had a few hours' sun on them.

Where small quantities only are grown it is much better to store Potatoes in a cool dry place where they can be easily got at, as they are not so hable to develop disease as when stored in a pit or trench.

IMPORTANT NOTICE.—Seed Potatoes procured during the Winter and early Spring, when not required for immediate planting, should be taken out of the bag or package in which they are received and laid out in a dry, airy place protected from frost, or they will begin to sprout and a weakly growth will be the result.

SEA KALS.

MISCELLANEOUS PLANTS & ROOTS

ASPARAGUS PLANTS.

An ahundance of fine Asparagus may be grown with less than balf the expense usually incurred in making costly "beds," and will succeed admirably on most soils when planted in lines or clumps on the Kitchon Garden borders, or amongst dwarf-growing Fruits where the space will admit, a liberal cultivation being all that is required to ensure the best results. The roots are liable to injury if romoved during sovero weather in Winter. They are best planted when growth has commenced in Spring, and when they can be carefully taken up and packed so as to travel a long journey, without injury. They should, however, in all cases he planted as quickly as possible after receiving them. We consider March and April the best months for planting.

CONNOVER'S COLOSSAL Two and three years old TRUE GIANT. Two and three years old ...

.. per 100, 5s. and 7s. 6d. .. per 100, 3s. 6d. and 5s.

ASPARAGUS SEED.

TRUE GIANT. A fine variety, producing large heads of excellent quality per lb. 4s. 0 4 CONNOVER'S COLOSSAL. A very large variety, very prohific, and of fine flavour per lb. 6s. 0 6

EARLY GIANT PURPLE (Argenteuil). As grown by the celebrated French growers for Paris Market; robust variety of the most delicious flavour ... per lh. 7s. 0 8

RHUBARB.

One of the most useful, wholesome, and profitable of garden plants. The ground for this should be well broken up and manured, and the plants should be $2\frac{1}{2}$ to 3 feet apart. March is the best month for planting, but it is not advisable to pull any of the stalks the first season for fear of unduly weakening the growth. A top-dressing of well-decayed manure in Winter is very beneficial.

CHAMPAGNE. Deep red stems, early, one of the vory hest for general use.

each 1s.; per doz. 10s 6d.

DAWS' CHALLENGE. A remarkable variety for forcing, growing up to 4 feet. Very fine colour, First Class Certificate, R.H.S. ... each 1s. 6d.

DAWS' CHAMPION. A fine new variety of great size and splendid colour. Very productive each 1s.; per doz. 12s.

Two-year Seedlings, strong transplanted roots of the following, each 9d.; per doz. 7s. 6d. MYATT'S LINNÆUS. ROYAL ALBERT. MYATT'S VICTORIA.

SEA KALE.

This valuable esculent is easily forced if care is taken only to apply heat gradually, as it will not succeed if placed in too high a temperature at starting. Place soveral crowns a few ineless apart in large pots, and stand them in a temperature of about 45 degrees, with an inverted pet placed over each to exclude light and insure blanching; a mushroom house, pit or cellar, will do well for this purpose. Sea Kale may also be easily forced in the open ground by covering it over with large specially made pots, and applying fermenting material. The heads should be cut when in about the condition shown in illustration, and taken off in the same way.

CROSNES (Stachys tuberifera). First Class Certificato, Royal Horticultural Society. This is a tuberous vegetable introduced from Japan. It is a hardy plant, producing a large quantity of tubers in the same way as the Potato. Its culture is very easy, as it grows well in any good garden soil, and is readily propagated by means of its numerous tubers. They may be left in the ground until required for use, as the severest frost does not injure them in any way. The best and simplest way of cooking this vegetable is to boil in water with a pinch of salt, then fry them. They are of delicate flavour, somewhat resembling boiled chestnuts

ROUGH-STALKED MEADOW GRASS.

OUR FARM SEED CATALOGUE FOR SPRING, 1914,

Will be published on March 2nd, and will be sent gratis and post free application. If you are interested, let us register your name at once.

It contains a complete list of the choicest sorts of Mangels, Swedes, Turnips, and other Root Seeds, Clovers, Grasses, and other Forage Plants, besides many valuable hints on cultivation.

DANIELS' SUPERIOR GRASS SEEDS FOR LAWNS, &c.

For many years we have given close attention to the selection of the most suitable Grasses for producing the best Lawns, Tennis Courts, Cricket Grounds, Golf Links, &c., and we have much pleasure in recommending the splendid mixtures we offer as the very best procurable for the purposes named. March and April are the best months for sowing in Spring. September and early October for Autumn sowing. For renovating existing lawns, lightly rake the worst places and bare patches, then sow our Peerless Mixtures (Nos. 5 or 6) at the rate of half-pound to the rod, or more thickly if the lawn is very bare; apply a thin sprinkling of finely sifted soil, and roll with a light garden roller; protect the newly sown parts from birds.

No. 1. DANIELS' SPECIAL MIXTURE FOR LAWNS.

This is a special mixture of the finest leaved dwarf evergreen Grasses, and will produce an extra fine close velvety turf. Firstclass for making new lawns or for renovating. Highly recommended. Per lb. 2s., per bushel 30s.

No. 3. DANIELS' MIXTURE OF DWARF GRASSES.

A good cheap mixture for producing a fine close turf. Per lb. 1s., per bushel 20s.

No. 5. DANIELS' PEERLESS MIXTURE

Without Perennial Rye Grass. FOR GARDEN LAWNS.

This mixture is composed of the finest dwarf-growing Grasses for producing a fine velvety Turf of extra good quality.

Per lb. 1s. 6d. and 2s., per bushel 25s. and 30s.

Where larger quantities than those mentioned are required we shall always be pleased to make special quotations.

No. 2. DANIELS' FINE MIXTURE OF DWARF GRASSES.

A splendid mixture of fine Grasses, suitable for Tennis Courts. Croquet Grounds, &c., also a most useful mixture for renovating bare and weak patches.

Per lb. 1s. 6d., per bushel 25s.

No. 4. DANIELS' MIXTURE FOR SHADY LAWNS AND UNDER TREES.

A useful mixture for producing a fine turf in enclosed and shady places. Per lb. 1s. 6d., per bushel 25s.

No. 6. DANIELS' PEERLESS MIXTURE.

Without Perennial Rye Grass. FOR TENNIS LAWNS.

A mixture of fine Grasses for producing a close, dwarf, springy Turf, most suitable for this purpose.

Per lb. 1s. 6d. and 2s., per bushel 25s. and 30s.

N.B.-Where no definite instructions are given, we shall supply our Special Mixtures, containing Perennial Rye Grass.

DANIELS' SUPERIOR GRASS SEEDS FOR GOLF LINKS, &c.

A GOLF GREEN, SOWN WITH OUR SPECIAL MIXTURE.

No. 7. DANIELS' SPECIAL MIXTURES FOR GOLF LINKS.

For Putting Greens. A selection of the finest Grasses for producing a smooth even surface. Per bushel 30s.

Other mixtures for Golf Courses, 15s. to 25s. per bushel.

No. 9. DANIELS' SPECIAL MIXTURES CRICKET & FOOTBALL GROUNDS.

Per bushel 15s. to 20s.

No. 8. DANIELS' SPECIAL MIXTURES FOR BOWLING GREENS.

A selection of fine Grasses, specially adapted for hard wear and at the same time producing a fine even turf.

Per lb. 1s. and 1s. 6d., per bushel 20s. to 25s.

No. 10. DANIELS' SPECIAL MIXTURES FOR PARKS, RECREATION GROUNDS, &c.

Per bushel 15s. and 18s.

Where larger quantities than those mentioned are required we shall always be pleased to make special quotations.

Hints on Lawns.—There is no part of a garden which requires such caroful and regular attention as the lawn, and certainly there is nothing moro delightful than a well-kept lawn in proximity to a residence. is quite possible for even the smallest cottage to have its plot of grass, providing sufficient care is taken at the outset in forming it. The following

hints will be found of help to those about to form or renovate a lawn Choose an open space as level as possible, and naturally well drained; to the lower parts. The whole of the ground should be well dug and pulverized to a depth of eighteen inches, giving a good dressing of manure at the same time, after digging rake the surface level and very carefully remove all stones, rolling it quite firm all over. Care must be taken not coallow any carting or wheeling appen the ground after being dug unless to allow any carting or wheeling upon the ground after being dug unless boards are laid down for the purpose.

The best time for sowing Grass Seeds is the Spring, during March and April, although satisfactory results are often obtained when sown in September. To ensure the securing of a good thick even turf, it is imperative that the seed be sown very thickly, in fact it is much better to sow a liberal quantity at first than to have to renovate at the end of the season. Four or six bushels per acre is not too much, generally speaking about one to two lb. to a rod of ground is a good dressing.

Remove all weeds as they appear and as soon as the grass is three or four inches high it should be mown with a seythe and well rolled. Frequent rolling and cutting must be done if a really fine turf is desired, and an occasional dressing of Daniels' Lawn "Manure," applying about two to three ounces to the square yard, will be found to promote a healthy growth of the young sward.

The renovating and improving of old lawns is most important work and may be done either in March or September. The seed should be sown evenly over all bare places and in all holes, using the finest lawn mixture; cover the seeds with a slight sprinkling of finely sifted soil and roll the whole surface down evenly and firmly. The sowing of Lawn Seeds should always be done in ealm fine weather when there is no fear of either the seed being blown about or of the soil adhering to the roller. Small birds are very fond of grass seeds, and it is therefore most advisable to give some protection (when convenient) until the young grass gets hold.

HORTICULTURAL MANURES, &c. DANIELS' NORWICH FERTILIZER.

Without doubt the finest Manure for Fruit, Chrysanthemums, and all [general Garden Crops; the sales have again more than doubled those of any previous year, and we strongly recommend our customers to give it a trial.

DANIELS' DAISY DESTROYER.

This preparation has become an immediate success, having given great satisfaction in every instance.

We have made arrangements for an increased demand during the coming Spring, and all who value a velvety clean lawn should use it if troubled with Daisies or Plantains. We have every confidence that it will give entire satisfaction wherever used. It will be found to thoroughly eradicate all Daisies, and at the same time, as a fertilizer, give renewed vigour to the finer grasses.

A dressing of about 4 ounces to the square yard will be found sufficient, and the best time to apply it is in April, choosing dry weather for the work; where the lawn is badly infested with Daisies it should be carefully applied to the plants individually.

Prices-7 lb. 2s. 6d.; 14 lb. 4s. 6d.; 28 lb. 7s. 6d.; 56 lb. 12s. 6d.; 112 lb. 25s. Carriage Paid on 1 cut. and \(\frac{1}{2}\) cut. lots.

The careful attention we have given for so many years to the growth and selection of our fine strains of choice Florists' and other Flower Seeds, has secured for us a world-wide reputation for their excellence, and a very large and steadily increasing business in this Department.

We are especially famous for our splendid strains of Asters, Stocks, Begonias, Phloxes, Pansies, Primulas, Wallflowers, Godetias, Clarkias, Mignonettes, etc., most of which are especially grown for our retail trade, and may be relied on as the finest procurable.

We have again carefully revised our List of Flower Seeds, and several interesting and valuable additions have been made, whilst some fine Novelties in Sweet Peas, and other choice flowers, have been introduced, for which we anticipate a great demand.

As a consequence of the very unfavourable climatic conditions during last Summer and Autumn, we regret to say that seeds of many of the newer and choicer varieties of Swcet Peas are again exceedingly scarce. To prevent disappointment we strongly advise our customers, who wish to secure special sorts, to send us their orders as early as convenient after receiving this Catalogue.

ASTERS DANIELS' DWARF PERFECTION BEDDING growing at our Trial Grounds.

DANIELS' SUPERB PRIZE ASTERS.

We have long been famous for our magnificent strains of Asters, which form an important branch of our Flower Seed business, and we would mention that our seeds of these having been grown especially for our retail trade may be relied on as the very finest procurable.

PLEASE NOTE.—We do not as a rule count the seeds contained in our packets, but customers may in all instances rely on liberal quantities of good seeds being given for the prices charged.

DANIELS' GIANT OSTRICH PLUME.

We have much pleasure in recommending this grand new strain of beautiful varieties which we have every confidence in saying will give the highest satisfaction amongst our customers.

The plants are of a strong bushy habit of growth, and attain a height of 15 to 18 inches. The very large handsome flowers, which are borne on long wiry stems, are of the true Ostrich Plume type, and of immense size—when well grown, frequently measuring six inches and even seven inches in diameter, whilst the colours embrace the most beautiful and delicate shades known in Asters. These will prove a spleudid class alike for garden decoration, as cut flowers or for exhibition.

DANIELS' DWARF PERFECTION, BEDDING.

See Illustration (page 61)

These beautiful dwarf Asters, introduced by us a few years ago, have proved themselves by far the finest and best dwarf bedding varieties in existence. The plants grow only about 7 or 8 inches high, with stiff upright stems and branches, and form handsome circular bushy plants with the flowers well above the foliage. The blooms are of large size, perfectly double, beautifully imbricated and of the most perfect form. This is a superb class for bedding and general garden decoration, and planted in beds of the distinct and beautiful colours mentioned below, or used as an edging to large beds, they are splendidly effective and continue in bloom for quite a long time.

RAY ASTER-New Giant White.

A fine new robust growing variety, attaining the height of eighteen inches or two feet. It is of a free branching habit, is a splendid drought resister, and blooms freely in the hottest weather. The very large pure white flowers are composed of long, straight, needle-like petals which radiate from a yellow centre, giving the blooms a most handsome appearance. The flowers being produced on long wiry stems will be found of great value to cut for decorative purposes.

We beg to intimate that we cannot "break" packets quoted in this list.

DANIELS' SUPERB PRIZE ASTERS.

CULTIVATION OF ASTERS.

Cultivation.—Asters form one of the chief attractions in all gardens in which annuals are grown. They are procurable in every colour from white to

Cultivation.—Asters form one of the chief attractions in all gardens in which annuals are grown. They are procurable in every colour from white to deep crimson, are very easy to raise from seed, and give a glorious display of bloom in Autumn after many other plants have ceased to flower.

Asters are alike useful for borders and as cut flowers, the single kinds being of especial value for the latter purpose. The seed should be sown in March or April in boxos of good rich soil, and treated in the same manner as other half-hardy annuals; give plenty of room between the plants, and place the boxes in a sunny position under glass, allowing abundance of air and water; after about three weeks remove the boxes to a frame where the lights can be lifted off during the day, and so gradually harden the plants in readiness for their removal to the borders. The greatest care should be exercised in transplanting from the boxes, so as to ensure the seedlings getting a good start. For a succession of flowers seed may be sown at the latter end of April in the open border where they are to bloom. Good sturdy plants may be raised by this method, and will give a supply of late flowers, until the frost cuts them off euts them off.

Asters respond readily to liberal treatment although they will thrive in any good garden soil. An excellent position for them is on beds or borders which have been well trenched and liberally manured early in the season. Occasional waterings with weak manure water will be found of great benefit when the plants are developing their blooms. Such treatment gives substance to the flowers and extends the period of blooming. Where the space is available, it is an excellent plan to grow beds in the kitchen garden of separate colours of Asters specially for cutting purposes. Such varieties as Giant Ostrich Plume, Improved Comet, and the Single Sinensis will be found admirable for this purpose, and a supply for the house will be at hand without spoiling the effect of the beds. When only one kind can be grown we should strongly recommend our customers to try our Giant Ostrich Plume as being in our opinion the most delightful of all the doubles. The flowers which are very large, are horne on tall graceful stems often 18 inches long, and the colours are most distinct and varied. Ostrich Plume are quite as easily grown as the ordinary sorts.

Our Large-flowered Comet, while not growing quite so tall as the former, gives large, beautiful flowers, and is of great value both for bedding and cutting purposes. The perfect type of Dwerf Redding Aster is found in our Dwerf Perfection, which forms an ideal adding to a hed of taller kinds or

eutting purposes. The perfect type of Dwarf Bedding Aster is found in our Dwarf Perfection, which forms au ideal edging to a bed of taller kinds, or is equally effective in a hed by itself.

GIANT ENGLISH BROMPTON STOCKS.

An exceedingly fine and useful class of Spring flowering plants of the old cottage garden type, producing large, handsome spikes of beautifully coloured and deliciously scented flowers in April and May. The seeds should be sown in May or early in June; sow thinly, and soon as the young plants are large enough to handle, prick them out about six inches apart on nursery beds in a sheltered position where they can remain during Summer. In September or October they should be planted out where intended to bloom in Spring. For this purpose some sheltered spot, as on a sunny border or under a South wall, should always be selected, as the plants are liable to suffer from severe frosts in early Spring if too much exposed. The plants grow about two feet high and should be planted eighteen inches or more apart.

Cultivation of Stocks. - These deliciously-scented half-hardy annuals are amongst the most popular of all Summer bedding plants and they are deservedly given a place in both large and small gardens.

Ten-Week Stocks are easily raised from seed, but require careful treatment when in the seedling stage, as they are liable to damp off if over-watered and kept close, but if they are given an abundance of air and kept moderately moist, nothing need be feared and sturdy plants are assured.

During recent years much care has been devoted to the improvement of Stocks, both with regard to increasing the size of the individual flowers as well as the spike, and to the introduction of much clearer colours. It is now possible to grow them in every shade of colour from pure white to deep crimson and purple.

When planted in clumps of distinct colours on borders or in separate beds, Ten-Week Stocks form most attractive subjects, and the perfume is so delicious that after a shower of rain a bed in full bloom will fill the garden with its delightful odour.

The seed may be sown at any time from February to June, according to the time the plants are required to bloom; they are best raised in a frame or greenbouse. Either shallow wooden seed boxes or pans may be used, and the seed can be sown either in drills lengthwise down the boxes or (in the case of pans) sprinkled lightly over the surface, the seed being spread as evenly as possible.

The soil used should be rich potting mould finely sifted, and after sowing, the seed should be thinly covered with the same, keep the frame close and shaded until the seeds have germinated, when a little air should be given and the amount gradually increased as the plants gain strength.

When the plants are large enough to bandle with safety they should be transplanted into boxes, allowing nine inches between each plant.

They can then be gradually bardened off, but should be at first

carefully protected at night from the frost.

Give abundance of air during the daytime, and after about three weeks or a month they should be ready for planting out in the positions in which they are to bloom in the border or beds.

When a succession of flowers is desired, a sowing of Stocks should be made in the open border when strong sturdy plants will be raised; these will follow on in succession after those raised inside.

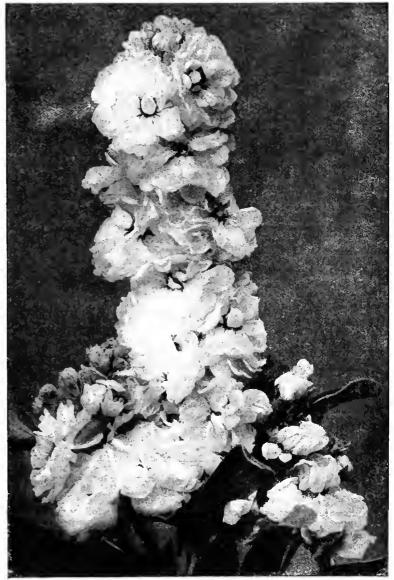

Always be careful that the borders are thoroughly trenched and given a liberal supply of decomposed manure before the Stocks are planted.

If possible, select showery weather for planting out, and be sure that the plants are thoroughly watered into the ground and kept shaded during the middle of the day for the first few days.

In planting out seedling Ten-Week Stocks, with a view to securing the largest number of double flowers, preference should always he given to those with a good share of fine fibrous roots, even if the plants are somewhat weaker; we have found from long experience that those having coarse forked roots invariably produce

the largest percentage of single blooms.

By sowing the seed in July and potting the seedlings in single pots and growing on in a frame, a good display of bloom may be bad in the greenbouse during the Winter months.

WHITEE-FLOWERING STOCK-BEAUTY OF NICE.

WINTER-FLOWERING AND INTERMEDIATE STOCKS.—This is a very useful class for Winter blooming. The seed should be sown in July and the plants potted on into 5 inch pots, placing 3 plants in each pot; no artificial beat is needed, but the plants may be grown on, and placed in a green-bouse or conservatory, where they will provide a splendid show of bloom in the early part of the year.

From LADY O'BRIEN, Maynooth, Ireland.

From Mr. E. SAVAGE, Chichester.

From Mr. H. HARRIS, Burton-on-Trent. March 6th.
"I got four Firsts for your Stocks last year grown from your Seed."

WINTER-FLOWERING STOCKS

A splendid race of stall growing varieties, producing magnificent spikes of very large deliciously-scented double-flowers. Sown in July or August and potted up in Autumn, these will furnish some beautiful flowers under glass in Winter and early Spring, the long flower-stems making them of especial value for cutting. If sown in February or March and planted out in good soil, some grand spikes of bloom may be had during the summer and autumn.

DANIELS' SUPERB TEN-WEEK STOCKS

Our splendid strains of Ten-week and other Stocks are especially grown for our retail trade by one of the most famous growers, and may be thoroughly relied on to produce the largest percentage of fine double flowers procurable from seed.

DANIELS' LARGE-FLOWERED TEN-WEEK.

This is incomparably the finest strain of Ten-week Stocks in existence, and, where space is limited, should always be grown in preference to others. The plants which attain about one foot in height are of the same compact habit as the dwarfer varieties, but the flowers when well grown are nearly double the size of those of the old variety. The seeds of this always produce a high percentage of double flowers, whilst in substance of petal, brilliancy of colouring and richness of fragrance they are unrivalled.

From Mr. T. E. KIMPTON, Shortlands.

July 29th. "The Ten-week Stocks are simply perfect. 1 am pleased to say I have at least 90 per cent doubles; they are line shape and bloom."

STOCK-MAUVE QUEEN.

172 SCARLET QUEEN, DWARF TEN - WEEK. A charming variety, growing only 6 inches high and literally covered hy its numerous spikes of deep blood erimson flowers. Splendid for heds, edgings, or pots

173, MAUVE QUEEN (Heliotrope). A heautiful variety, growing about 1 foot high, with finely scented double flowers of a pale blush mauvo colour, quite a distinct and novel shado of colour amongst Stocks 6d. and 1 0

From Miss H. F. LARMAN, Bishop's Stortford.

April 7th.

"I have had some of your Stocks for several years. I have been delighted with them: they have bloomed so freely. I have had two distinct crops from them."

SWEET PEAS.

We regret to state that owing to the unfavourable weather conditions of last Season, seeds of most of the new and choicer Spencer Varieties of Sweet Peas are again very scarce, the crops in some instances having been almost a total failure. We therefore strongly advise all who wish to secure special varieties to send us their orders as early as convenient after receiving this Catalogue.

SUPERB VARIETIES OF RECENT INTRODUCTION.

The following list includes the finest and most beautiful of the new varieties. Most of these have been grown and selected at our Nurseries during the past season, and can be highly recommended as really first-class for garden decoration or exhibition.

DANIELS' SPECIAL MIXTURE OF GIANT-FLOWERED SPENCERS.

We highly recommend this splendid mixture which we feel sure will give great satisfaction. The varieties included are all of the true Giant-flowered Spencer type, and the colours include all the most brilliant and beautiful shades of scarlet, crimson, magenta, orange, salmon, pink, mauve, cream and primrose to the purest white. This will prove a first-class mixture where really good Sweet Peas are required for cut bloom.

294 Per pint, 7s. 6d. 295 Per half-pint, 4s. 296 Per oz., 9d.

Large-flowered in Mixture.

Splendid varieties in choicest mixture, including a good proportion of the light and delicately coloured sorts. Very highly recommended.

SWEET PEAS-Ordinary Class, Choice Mixed.

300 Per quart, 4s. 6d.

301 Per pint, 2s. 6d.

302 Per oz., 4d.

Cultivation.—To grow really fine Sweet Peas, the ground should be deeply dug or trenched and plenty of well-decayed manure, with some coarse hone meal worked well in and to the bottom of the trench. This should be done in Autumn if convenient, or as early as possible in Spring, so as to allow of the ground settling down firmly before planting out.

For early blooming, sow the seeds thinly in pots or pans in January or February, and place in a gentle heat; harden off as soon as the plants are well up, and plant out as soon as convenient in March. If intended to be grown for exhibition, we should recommend planting in clumps four feet apart, six or eight plants in a clump, or they may be planted in single or double rows six feet apart; but in any case the plants should be not less than six or eight inches apart in the row or clump. Stakes should be placed as soon as the plants are three or four inches high. The ground should be kept free of weeds, and water given if the weather is dry.

As growth advances some weak liquid manure should be given once or twice a week, and if the weather continues dry, a mulching of some short, well-decayed manure should be placed on the surface about the roots. This will be of great henefit in stimulating a healthy growth, and some splendid flowers will be produced.

An excellent liquid manure can be made hy dissolving Daniels' Sweet Pea Fertiliser, ahout four ounces to the gallon of water, or guano, ahout two ounces to the gallon, with the addition of some soot. Either of these are splendid stimulants for promoting growth and improving the size and hrilliancy of the flowers. Drainings from a cowshed or manure heap, mixed with five or six times its bulk of clear water, also forms a very good liquid manure.

For later successive blooming the seeds may be sown out of doors at intervals from early March to the middle of May, giving them a similar treatment to that recommended above. Excellent results may also be had by sowing in October or November in a sheltered position in the garden. These, with a slight protection, will survive a moderately severe Winter and furnish some nice blooms for cutting earlier than those sown in spring.

If the blooms are closely gathered and seed pods not allowed to develop, the plants will continue in bloom for a much longer period.

From Mr. R. T. KIRK, Oulton Broad.

August 20th.
"I have had a splendid show of Sweet Peas from your seed, and they are as large as ever. I only had 2 ozs. (No. 118).

I think there is now 400 to 500 blooms."

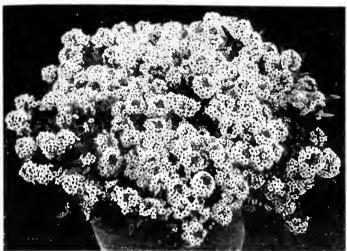

From Mr. C. THOMAS, Byfleet.

March 16th.
"We took Second Prize for Coronation Sweet Peas, and Second for another bunch from seed we had off you."

GYPSOPHILA ELEGANS GRANDIFLORA ALBA (New).

This splendid hardy Annual is a great improvement on the old White Gypsophila, and should be freely grown wherever cut flowers are in demand. It grows about $2\frac{1}{2}$ feet in height, and throws out numerous branches with light feathery sprays or panieles of numerous pure white flowers. These can be cut with long stems, and have a very graceful and pretty effect in association with Sweet Pens when used for table or other decorations.

ALYSSUM.

ALYSSUM COMPACTUM-LITTLE GEM.

ANTIRRHINUMS.

These fine hardy perennials make a beautiful display during the Summer and Autumn, and are very attractive. The Tom Thumh varieties, which grow only about 6 inches high, are very useful and pretty for dry banks and rockeries, and form a splendid edging for large heds or herders, continuing in hloem for a long time. Sew the seeds in February or early in March in light, rich seil and place in a gentle heat, prick out in pans or boxes to strengthen and plant out where intended te flewer as seen as large enough. These will bloem during the Summer and Autumn. The tall varieties grow 2 to 3 feet in height, the semi-dwarf, 12 or 18 inches. Beriph. - s. d.

CALCEOLARIAS.

We have much pleasure in offering our splendid strain of Calceolaria hybrida, which has been carefully saved from a magnificent collection during the past season, and been awarded many First Prizes. The flowers will be found of large size, beautiful form, and tigred and spotted with the most exquisite and brilliant markings.

CALCEOLARIA-DANIELS' CHOICEST STRAIN.

Sow the seeds of these in May, June, or July, in well-drained pots or seed-pans; cover the drainage with rough fibrous loam, and fill up the surface with fine light sifted mould and silver sand; water with a fine rose water-pot, after which sow the seed, placing a piece of glass over the pot to retain the moisture, no covering of soil being required. Place the pots in a cool frame or under a handlight, taking care to shade from the sun. Remove the piece of glass as soon as the plants are up, and when large enough to handle, prick off one inch apart into pots or paus made up as hefore, placing in a somewhat close situation, and when of sufficient size pot off singly, and treat in a similar manner to that recommended for tender annuals. Calecolarias should, however, he always kept in a cool, moist position, a dry heated atmosphere heing very prejudicial to their growth, and they should he kept well supplied with fresh air.

CALCEOLARIA—Golden Glory.

98 This is a beautiful new hardy hybrid, with hright golden yollow flowers that are produced for a long period. It is an excellent plant for the greenhouse, a capital bedder, and sufficiently hardy for the herhaecons horder, where it forms a very attractive object

From Mr. J. GLISTER, Stanley.

July 29th. " I might say the previous Seeds I had from you have been the best that money could buy."

CALLIOPSIS OR COREOPSIS.

These beautiful free-flowering hardy Annuals are exceedingly valuable for garden decoration. They succeed almost anywhere, but are of especial value for growing in town gardens, where they thrive better than most annuals. They remain in bloom for a long period during the Summer and Autumn, and the blooms of all the taller growing varieties will be found very useful for cutting. The beautiful golden-yellow C. stillmanni blooms within five weeks of the seeds being sown. The Tom Thumb varieties are exceedingly pretty.

CALLIOPSIS TINCTORIA.

CALLIOPSIS GRANDIFLORA.

A very handsome perennial variety, quite hardy and growing ahout 3 feet high. The beautiful golden yellow flowers, 3 inches across, are horne on long wiry stems making them of great value for cutting. Seeds sown in March or April will hloom freely in the summer and autumn following. This is a fine showy plant for the garden

CAMPANULAS.

Campanulas pyramidalis and p. alba form very useful pot plants for the cool greenhouse, whilst C. fragilis is an excellent trailer and very suitable for suspended pots or baskets. Amongst others mentioned, the beautiful persicifolia varieties are very fine and greatly prized for garden elecoration, whilst Turbinata is excellent for borders and rockeries. The Campanulas form a splendid group of plants for the garden, and are well worthy of cultivation. They are easily grown, and when in bloom are very charming. They will succeed almost anywhere, but generally speaking whrive best in a light rich sandy soil. Seeds sown from April to end of June.

CENTAUREA CYANUS MINOR.

(CORNFLOWER.)

From Mr. W. HULL, Cheltenham.

July 17th. ... The Canterbury Bells have been a great picture, and have been much admired."

CANTERBURY BELLS.

(Campanula Medium.)

A beautiful class of free-flowering hardy biennials for garden decoration. The large bells of pure white varieties are very handsome and should be freely grown for the fine contrast they afford with most other flowers. The double-flowered and Calycanthema varieties are exceedingly fine. Young plants potted up in early Autunn and stored in a cool pit for the Winter, may be brought into the greenhouse or conservatory in Spring, and will bloom beautifully without forcing. It should be borne in mind that all the varieties bave a tendency to sport and cannot be depended on to come absolutely true from seed, the best selected strains of doubles always producing some single flowers. All the sorts grow about 2 feet high.

COSMEA.

(Cosmos.)

COSMOS, ROSE QUEEN

A beautiful class of free-flowering, showy, half-hardy Annuals, growing about three feet high, with finely-divided, elegant, fern-like foliage. The flowers, which in form somewhat resemble those of single Dahlias, are borne on long, wiry stems, and are very useful for cutting. If the seed is sown in March under glass and the young plants planted out in May, they will commence blooming in July and continue in full flower quite into late Antunn.

From Mr. J. HANCOCK, Salke.

July 21th.
"I cuclose you a photo of one of our beds of Candytuft grown from your Seeds, with which I am highly satisfied."

July 18th.

"I am delighted with the produce of your Seeds. I took five Firsts and four Seconds at our Show."

DANIELS' SUPERB CINERARIAS.

Carefully saved from a fine collection of named and choicest seedling flowers, which we have every confidence in recommending as unsurpassable. The colours will be found varied and brilliant, combined with a faultless form of flower.

CINERARIA HYBRIDA.

Cultivation.—When required for a general display in early Spring, the seed should be sown in July or early in August, and when for Winter blooming, a few should be sown in March or April. Where the quantity of glass available is somewhat limited, the July sown will, however, be found the most useful. Sow in well-drained pots or paus of light rich soil, giving the seeds but a very slight covering, and place in a cool frame or under a handlight in a shady spot, pot off singly into small pots as soon as the young plants are large enough, and shift as required.

463	DANIELS' CHOICEST MIXED handsome flowers, including	. A	splendid s autiful vari	train of eacty of ea	er pkt.— large lours , and		466	NEW DWARF. A fine compact-growing class, with large handsome flowers, height about 6 inches, exceedingly floriferous. Choicest mixed 1s. 6d. and 2

CARNATIONS.

SEEDLING CARNATIONS, FROM OUR COLLECTION OF CHOICE VARIETIES

Carnation seed may be sown from March to May in well-drained pans of good rich soil, and these should be kept shaded until the seeds have germinated, when the plants should be gradually hardened off by admitting air and light. Prick off the seedlings about nine inches apart in boxes or prepared borders, and let them stay there until the Autumn, when they

may be permanently planted in the positions they are to occupy.

The Perpetual or Tree varieties are a very valuable class, giving as they

do a charming display in Winter, when flowers are so much valued.

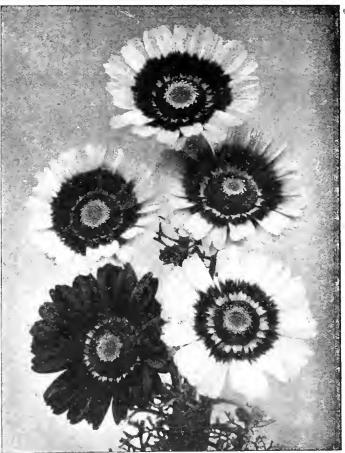

The "Margnerite" Section is a special favourite with amateurs, as the plants when raised from Seed early in the Spring, produce an abundance of flowers during the Summer, if sown in June, earefully lifted in Autumn and potted up, they will continue to bloom right into the Winter.

DIANTHUS.

DIANTHUS HEDDEWIGH-SNOWDRIFT.

These constitute one of the most brilliant and splendid groups of hardy biennials in cultivation. The large, beautifully coloured flowers vary from pure white to the darkest crimson, some of the double flowers being almost equal to carnations in size. All the varieties are easily raised from seed, and sown in March under glass and transplanted they will bloom freely the first season and make charming beds during the Summer and Autumn. The Heddewigis section produces the largest flowers and are perhaps the most beautiful, but all are deserving of extensive cultivation. The plants vary in height from 8 inches to 1 foot.

GERBERA.

(The Transvaal Daisy.)

- - warieties of this charming and interesting plant from the Transvaal. The colours of the flowers are of incomparable delicacy and richness, with almost an infinity of tints ranging from pure white through all the shades of yellow, orange, salmon, rose, cerise, scarlet, ruby, and violet. The beautiful light starry flowers are borne on long rigid stems, and are delightful as cut flowers, lasting a long time in perfection. They are easily raised from seeds grown in pots of sandy peat, and placed in a gentle heat. The young plants must be kept only moderately moist, and if potted on into sandy peat and loam, and re-potted as growth advances, may be had in bloom in from seven to nine months. The plants will thrive in the greenhouse, or may be planted in a sunny sheltered spot in the garden

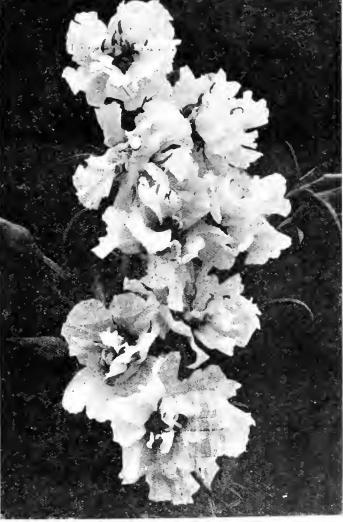

GERBERA JAMESONI-NEW HYBRIDS.

All Flower Seeds quoted in 3d. packets may be had at 2/6 per dozen.

FOX-GLOVE—DIGITALIS.

A very beantiful and showy class of hardy perennials, of fine effect for shrubbery borders, and first class for planting in any odd corner of the garden. The large spotted varieties are exceedingly handsome. They grow about 5 to 6 feet in height, with long spikes of beautiful Gloxinialike flowers that continue for a long period when the plants are partially shaded by trees, &c. The seeds should be sown somewhat thirdy out of doors in May or June, and the young plants should be planted out where intended to bloom, in Autumn or early Spring.

GLADIOLUS PRÆCOX.

588. A fine new class of large heautifully blotched flowers of the richest colours. Sown in February or March under glass, and the young plants planted out in May, will bloom in early Autumn with excellent results, and if the bulbs are allowed to remain in the ground, they will bloom finer still the second year, being quite hardy

from Mr. C. R. RISEBROW, Northrepps,

.140, 646. "I am pleased to say the Seeds I had from you last Spring have turned out exceedingly well. I am thinking of having a larger order this Spring."

GLOXINIA.

GLOXINIA-SPOTTED HYBRID.

These, the most exquisitely beautiful of all greenhouse plants, bloom freely the first year from seed, and should be grown largely by every one having accommodation for them. Sow in February or March on a good moist heat, in the way recommended for Caleeolarias. Pot off singly into small pots as soon as the young plants can be handled, and shift into larger as required, keeping the plants going with a good liberal warmth, and finally shift into pots of about six inches diameter, using a light and rich soil, and continuing with a moderate heat and giving air on warm days. Treated in this way, a charming display of bloom may be had during July and August, and some really grand flowers will be the result.

GODETIA.

A magnificent class of brilliant, large-flowered, showy hardy annuals that should be grown freely in every garden where a bold display is desired. They are very effective for mixed beds or borders, and when grown in masses are very charming. For a general display sow thinly in the open ground from early in March to the end of April. If sown in Autumn and transplanted in Spring they will bloom much earlier and finer. Excepting where mentioned the plants grow about 1 foot high.

From Mr. F. S. Moore, Hford,

Sept. 8th.
"I thought't might interest you to know what good results I have had from your Kochia Trichophylla."

KOCHIA TRICHOPHYLLA.

(Summer Cypress, The True Variety.)

This is undoubtedly one of the most interesting and beautiful plants of recent introduction. The plant which is of an elegant upright habit of growth, with pale green fern-like foliage, attains a height of about eighteeninches, and forms a charming plant for the centres of small beds, or as a "dot" plant on borders amongst dwarfer growing subjects. In the Autumn, the foliage changes to a deep bright crimson colour, when it has a very novel and striking effect. It is easily raised and grown as a half-hardy annual, and may be sown in the open ground in April, and thinned out or transplanted, whilst potted up into six or eight inch pots, it forms a charming plant for the greenhouse. 656 Per packet 3d. and 6d.

LARKSPUR.

A very fine class of beantiful showy hardy annuals that are of great value for garden decoration. The tall-growing varieties are especially handsome, and the flowers being produced on long, graceful spikes, and very useful for cut flowers.

LYCHNIS HAAGEANA.

(New Hybrids.)

A splendid class of dwarf-growing hardy herbaceous perennials, growing about 1 foot high. The flowers vary in colour from the most intense and brilliant searlet to the brightest orange and salmon shades, and are very effective when grown in good clumps on the border.

685 CHOICE MIXED HYBRIDS, in beautiful variety 0

LOBELIA.

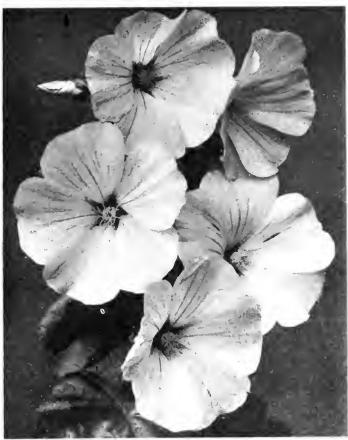

LOEELIA-DANIELS' WHITE BELDING.

To secure fine plants for redding out the following May, some prefer to sow the seed in Autumn, but February or March is good time for sowing if the plants have careful attention and are grown on freely. Sow the seeds thinly in pans or pots of sandy loam, cover very lightly, and place in a heat of about sixty degrees, keep moist, and soon as the young plants can be handled, pot olf singly into small pots of light rich soil, keep near the glass in a gentle heat, and give plenty of air on fine days. Carefully picking off all the tlower-buds will greatly assist their growth, and they should on no account be allowed to suffer from want of moieture. Other excellent methods are to prick the young plants five or six in a five-inch pot, or, better still, to plant them thinly in shallow trays of rich soil, keeping in gentle heat, giving air, etc., as recommended. These will generally form compactly grown, sturdy plants, that will quickly preduce a beautiful effect when planted out. Lobelias intended for pots or window-boxes succeed best when planted out thinly in good soil in an open situation, and carefully lifted when they have formed nice tufty plants; these will at once commence blooming, and produce an effect that could not be otherwise obtained. For bedding out, we strongly recommend Daniels' Dark Blue and Daniels' White Bedding as most compact in growth and reliable in colour. Royal Purple and Barnard's Perpetual are also very line, whilst for pot culture, hanging baskets, and greenhouse decoration, the beautiful Tenuir and the varieties of Ramosa are by far the best.

ANIELS' DARK BLUE. A very fine dark blue, compact-growing variety; splendid for edgings and carpet bedding. For a really good dark blue bedder, we recommend this as 686 DANIELS' DARK BLUE. the best variety for garden decoration ... DANIELS' WHITE BEDDING. Pure white dwarf; a beautiful BARNARD'S PERPETUAL. "The Migaonette have done splendid this year and has been much admired."

MIGNONETTE.

MIGNONETTE-DANIELS' GIANT RED.

These well-known, deliciously scented, hardy annuals are extremely casy of cultivation. Sow the sceds in the open border where intended to flower any time from the middle of March to the end of June, and thin out the plants to four or six inches apart as soon as they are large enough to handle. For Winter blooming sow any time in August, in pots of five or six inches diameter, and thin out the plants to three or five in a pot, keeping them as hardy as convenient before placing under glass for the Winter. The following list includes the finest varieties of recent introduction for garden or pot culture.

	tion	for garden or pot culture.		
	, ,	per pkt.	- s.	d,
	1.55	AUREA MAGNIFICA. A splendid variety far in advance of

June 1st. From Mr. S. C. ROGERS, Oakhill.

"I must say your Pansy Seeds are a grand strain, the colours are so varied and beautiful. Since I introduced them into our village about four years ago, they have become very popular."

DANIELS' SHOW & BEDDING PANSIES.

These beautiful, free-flowering, hardy plants are easily raised from seed, and will richly repay the small cost and trouble required to grow them to perfection. For blooming in Summer and Autumn, sow in February, March, and April, in pans or boxes of light rich soil placed in a gentle heat, and as soon as the young plants are large enough, prick out about two inches apart on rich soil to strengthen, and finally plant out six or eight inches apart, in ground into which a good quantity of welldecayed manure has been worked. Pansies delight in a somewhat shady position, and plenty of moisture in dry weather. The finest blooms are produced the second year, and grand flowers may be had by sowing in July or August in the open ground, and planting out in the following Spring into good rich soil.

Petunias in their many beautiful varieties form a highly interesting and desirable class of free-flowering plants for pot or garden culture; those of the Grandiflora section, hoth single and double-flowered, heing especially valuable. The blooms of these are of immense size, beautifully formed, and of the most charming and deficate colours; some of the The new "Fringed" varieties, both double and single, produce some charming flowers, the edges of the petals being elegantly cut or fringed, whilst the colours are most varied and heautiful. The seed we offer has been carefully saved from feeundated flowers of the finest varieties; but as Petunias raised from seed have a tendency to "sport," we cannot as Petunias raised from seed have a tendency to "sport," we cannot guarantee more than sixty or seventy per cent. of flowers true to description. All will, however, be found well worth growing, and occasionally some fine novelties may be secured. Petunias for indoor cultivation may be sown in January or early in February, but those intended for bedding out do not require to be sown before March. A soil composed of two parts leaf-mould and one part leam, with the addition of a little sharp sand, forms an excellent compost for these, but the seeds being very small require special care in sowing. Fill your pots or seed-pans to near the rim and press the soil down firmly and evenly, sow thinly, and cover the seeds very slightly with fine soil, sprinkle gently with a fine rose water-pot, and place in a gentle heat of sixty or sixty-five degrees, not higher, and and place in a gentle heat of sixty or sixty-five degrees, not higher, and keep nicely moist. As soon as the young plants can be handled, prick them out about one inch apart in pots to strengthen, and when sufficiently advanced in growth pot off singly into small pots, gradually harden off when established, and plant out about the middle of May, or shift into large pots as required. In planting Petunias, out of doors, ground should be selected that has not been freshly manured, otherwise a superabundant foliage will retard the flowering.

PETUNIA HYBRIDA GRANDIFLORA.

A fine and distinct class of beautiful, large-flowering varieties producing blooms of immense size, and of the most charming colours; much superior to the old varieties of Petunia hybrida. The plants are robust in habit of growth, and admirably suited as pot-plants for the greenhouse or conservatory or for garden decoration.

PERENNIAL POPPIES.

The seeds of the heautiful Nudicaule varieties, for blooming the same year from seed, should be sown in February or March in a gentle heat, and planted out in May. The large-flowered Orientalo varieties are best sown thiuly in the open ground in May or June, and transplanted in Autumn or early Spring where intended to bloom. The same treatment will apply to the dwarf Alpinum and other perennial sorts.

From Mr. A. T. MARKS, Farnhum.

From A. P. KEENE, Esq., Ashford.

July 18th. "I have grown 700 plants or therabouts from a 3d, packet of Wallflower Seed."

^{&#}x27;I may say I done well with the Sweet Peas grown from your seed, and they have been greatly admired.

PHLOX DRUMMONDI.

All the varieties of this beautiful class of annuals are worthy of extensive cultivation, especially those of the grandiflora class, which produce such a profusion and diversity of their large beautifully formed and brilliantly coloured flowers. Those of the compacta section growing only about four to six inches in height are also highly desirable for massing or beds, or for edgings, producing an effect that can probably be attained by no other plant.

Cultivation.—Sow the seeds in February, March, or early in April, in pans or boxes of light rich soil; sow thinly, press down firmly, cover lightly, water, and place in a gentlo heat. The young plants will be up in a few days, and soon as they can be fairly handled they should be pricked out about two inches apart in pans or boxes to strengthen, or potted singly into small pots: keep close for a few days, and when they are established give abundance of air, placing close to the glass to induce a sturdy growth. May is soon enough for planting out, and a rather dry and sunny position is to be preferred. The dwarf kinds should be planted about eight inches apart; the others, which grow from nine inches to one foot in height, with a spreading habit, may be planted one foot or more apart. Towards the end of April and during May, the seeds may be sown where intended to bloom in the open ground, and in an ordinary season a fine display may be had quite into the Autumn

PHLOX DRUMMONDI GRANDIFLORA

PHLOX DRUMMONDI, Intermediate.

An exceedingly free-flowering and beautiful class of great value for showy beds or borders. The plants, which are of a compact habit of growth, attain a height of about 8 inches.

	VERY CHOICE MIXED. All colours	 	0	6

PHLOX DRUMMONDI GRANDIFLORA.

The grandiflora varieties form a magnificent class; the plants are robust in habit, and the flowers, which are of various rich and beautiful colours, have in many of the varieties large, conspicuous white eyes; the individual blooms are of fine substance and scarcely inferior in size to the perennial sorts. A decided improvement on the old varieties of P. Drummondi. The plants grow about one foot high.

POLYANTHUS.

A beautiful free-flowering class of hardy perennials which has been highly improved of lato years. The plants are about six inches high, and bloom about the same time as primroses. The large-flowered varieties in their many beautiful colours are very charming and should be used extensively for Spring gardening. The blue varieties are very fine.

LARGE-FLOWERED POLYANTHUS

HARDY PRIMROSES.

Profuse flowering and very charming hardy perennials, growing six inches high, invaluable for Spring gardening. The hybrid varieties vary in colour from the palest and most delicate sulphur yellow, through all theseft shades of rose and purple to the most intense and brilliant crimson. From the beginning of April to the middle of May they are generally in full bloom, and present a most lovely appearance. A partially shaded border, with a westerly aspect, will grow them to perfection in almost any moderately-rich soil.

DANIELS'SUPERB FRINGED PRIMULAS

It is with very much pleasure that we offer the grand strains of Primulas named below, all of which have been specially grown for our retail trade, and will give the highest satisfaction. The flowers will be found of great size and perfect form, combined with the most brilliant and charming colours, and a habit of plant which leaves nothing to be desired.

The beautiful varieties of Primula sinensis may be sown in March, April, May, and June. The earlier sown are, however, to be preferred for making fine strong plants with an abundance of bloom. Great care must be taken to have a well-drained pot or seed-pan filled to within half an inch of the top, with sifted leaf-mould: leave the surface rather rough, and sprinkle the seeds thinly upon it. The most successful raisers do not cover with soil, but after sowing the seed press down the surface telerably firm, and place a square of glass over the pot. Place in a good strong heat, shaded

DANIELS' WHITE PERFECTION.

PRIMULA STELLATA (Star Primula).

An improved form of the Star Primula, differing only in the formation of its flowers, which are nearly equal in substance and size to some of the best of the Chinese varieties. The snow-white flowers are beautifully fringed, and stand well above the dark foliage and purple stems, which make it even more attractive than those of the older type.

	Tot paci

	Primula yet raised. The pure white massive flowers are		
	produced in great abundance, and contrast admirably with		
	the rich dark foliage; splendid for cutting	1	6

from strong light, and water very gently when the soil becomes dry. The seeds will germinate in two or three weeks, after which remove the glass and keep in a shady position. Pot off into small pots when the young plants are about half an inch above ground, and place near the glass in the frame or greenhouse. In their after culture Primulas should be kept as near as convenient to the glass, have plenty of fresh air, and never be kept for a long period in a high temperature or in a dry heated atmosphere.

LARGE-FLOWERED SWEET SCAELCUS.

SCHIZANTHUS.

A beautiful class of half-hardy annuals of elegant growth which succeed well grown out of doors. They are also of great value for pots in the greenhouse where they are charmingly effective. The flowers vary in colour from delicate pink and rose to carmine yellow, a pricot, manye, crimson and other lovely shades, the long sprays of bloom being very useful when cut, and last a long time.

The outdoor cultivation is very casy; the seed should be sown thinly in clumps during April or May, and the plants thinned out to about 6 or 8 inches apart, these will give a profusion of flowers all summer, for earlier blooming the seed may be sown in February or March in a slight heat for planting out in May. For pot culture seed may be sown at almost any time, and splendid specimens may 1e had by sowing in August or September for Winter blooming, about five plants in a six inch potbeing most suitable.

From Rev. F. C. BELL, Chelfo d, Cheshire,

"Of the seeds we had from your Schizanthus Wisctonensis less turned out to be the best; at present they are a lovely show."

From S. PENTNEY, Edling.

"The Schizenthus seed you sent turned out a great success and was much admired."

SCHIZANTHUS WISETONENSIS EXCELSIOR.

per pkt .- s. d. 1028 WISETONENSIS, Daniels' Excelsior Strain. This magnificent strain has been grown and specially selected for us at Wiscton during the past Summer by Mr. Musk, who rightly claims this as the finest strain of these beautiful flowers in existence. The plants, which grow from $1\frac{1}{2}$ to 2 feet high, are more robust in their habit of growth, and the flowers are much larger than those of the class hitherto offered. The individual blooms, which are of good substance, frequently measure 11/2 to 13 inches across, and have a wonderful range of the most beautiful colours known in this class, and which contrast admirably with the elegant fern-like foliage. The lighter coloured varieties, which largely predominate, have a ground colour of buff, white, pink, rose, yellow, etc., marked and surrounded by a deeper shade, and are exquisitely beautiful. This strain is a grand acquisition, and will be found splendid for pot culture or for exhibition 1029 WISETONENSIS. Daniels' Selected strain, charming shades

From C. R. DYSTER, Gt. Yarmouth,

Ang. 4th.
"Your Seeds have turned out grand this season, and is now in full bloom, and is
the admiration of every one."

SWEET PEAS.

See pages 71 to 74.

SWEET WILLIAM.

We have given great attention for several years past to our splendid strain of these, which we have much pleasure in offering. The sorts embrace a great variety of the choicest Auricula-eyed, margined, selfs, &e., of the most brilliant types. The flowers are beautifully formed, of good substance, and are almost invariably awarded First Prize wherever exhibited. Sow the seeds thinly, in any sheltered place out of doors, in May or early in June, and plant out one foot apart in August or September where intended to bloom.

The "HORTICULTURAL ADVERTISER" for July 6th, referring to	our	
Strain of Sweet Williams says:—		

"The Auricula-Eyed forms are delightful, and represent one of the best strains we have seen for years past. The trusses are good, and most of the pips 13 inches in diameter; the rich crimson and purple markings leave no opening for criticism by the most exacting florist, being perfectly even, and showing no tendency to run into the pure white of the ground colour. It is pleasing to find these old-fashioned favourites still receive in some quarters the attention they richly merit."

SWEET WILLIAM - DANIELS' PRIZE AURICULA-EYED.

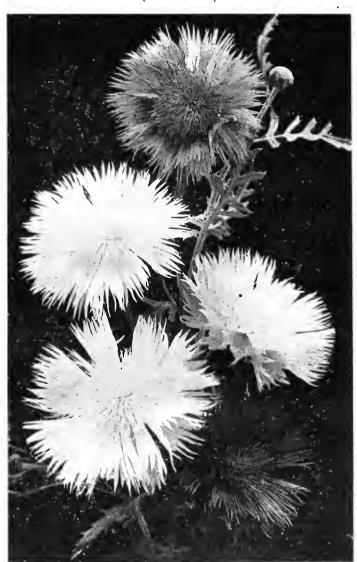

TITHONIA SPECIOSA.

(THE RED SUNFLOWER.) per pkt. . d 1942 This line new variety forms, when well-grown, a striking object on large borders; the plant grows about 5 teet high with large orange-red flowers; seed is best sown in March,

SUNFLOWIR -STARLIGHT.

A very fine class of hardy annuals of great value for garden decoration. Those of the "Giant" type are of stately growth and very line when planted amongst shrabs, on large beds, or at the back of the herbaccons border: whilst the dwarfer growing sorts are excellent decorative plants for the garden, the smaller flowering kinds furnishing some very treful entillowers.

TACSONIA VAN VOLXEMI.

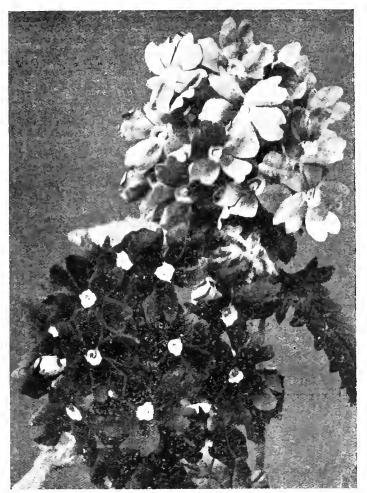

(The Scarlet Passion Flower.)

THUNBERGIA.

Beautiful annual climbers for Lots in the greenkonse. The plants grow about 4 feet high, with pretty flowers of yellow shades and white with black centres.

1060 VERY CHOICE MIXED SEED 0 4

VERBENA.

VERBENA LARGE FLOWERED VARIETIES.

Beautiful free-flowering half-hardy perennials, producing an abundance of bloom during the Summer and Autumn. Exceedingly useful for heds or borders. The plants grow about one foot high. Sow in February or March, in pans or trays of light rich mould, and place in a gentle heat. As soon as the young plants have made three or four leaves pot them off singly into small pots, keep close till established, when they should he placed near the glass and have plenty of air, gradually harden off and plant out in May where intended to flower. Seedling Verbenas are almost invariably very vigorous in growth, and if raise I from a good strain of seed will produce some charming flowers.

DANIELS' SELECTED WALLFLOWERS.

DANIELS' SELECTED BLOOD-RED WALLFLOWER.

The single-flowered varieties of this beautiful class of hardy flowers should be freely grown wherever there is room for them. No plant is easier of cultivation, and their charming colours and delicious perfume, added to their profusion of bloom render them highly desirable for Spring gardening. The splendid varieties—Eastern Queen, Vulcan, Cloth of Gold, Selected blood-red, and the Now White Queen are particularly worthy of notice, as are also the New Tom Thumb varieties which make a fine edging for large beds or borders. May and Juno are the best months for sowing the seeds. Excepting where montioned, the plants grow about 18 inches high.

May 17th. From J. T. W. COOLING, Newport, Mon.
"Your Vulcan Wallflower Seed turned out a splendid colour, and they were admired by all."

DANIELS' LARGE-FLOWERED ZINNIAS

ZINNIA.

These splendid half-hardy annuals are of great value as bedding and border plants, and should always be grown for their brilliant and beautiful colours. The middle of March is quite soon enough to sow the first batch of Zinnias under glass. Successive sowings may be made till the latter part of April. Sow the seeds in pans or pots of light, rieh, finely made soil, and place in a moderate heat. Soon as the young plants are large enough to handle, they should he potted off singly into small pots or pricked out into larger pots or pans to strengthen. To prevent the plants drawing up too much, keep as close as convenient to the glass, give plenty of air on fine warm days, and if the leading flower buds are pinched out as they make their appearance, a more bushy and vigorous growth will follow. Planting out should not take place till all danger from May frosts is over. An open sunny position with fairly rich soil should be chosen and the plants should not be less than a foot apart. Weak liquid manure given once or twice a week hefore the plants come into flower, will assist in the development of some fine blooms. The flowers of Vigorias have a toylogen to of some fine blooms. The flowers of Zinnias have a tendency to sport, and although the seeds of these have been carefully saved wo cannot guarantee that the flowers will be absolutely true to the colours mentioned. per pkt .- s. d.

DANIELS' LARGE-FLOWERED. A splendid strain of beautiful varieties, growing about two feet high, with large, handsome, double flowers of the most splendid colours.

ORNAMENTAL GRASSES.

The following hardy annual ornamental grasses are amongst the best of their class for the flower garden. They are one and all of a graceful and elegant habit of growth, and highly interesting. If the heads are cut before they arrive at full maturity, they are charming for boundets or table

accorations.

Choice Flower Seeds in Mixture.

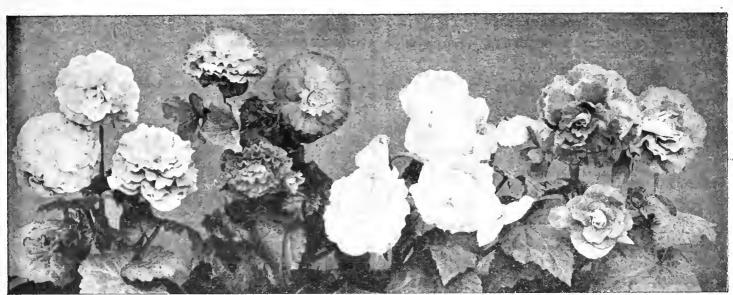

FOR SOWING ON BANKS, ROCKERIES, WASTE PLACES, &c.

We offer a splendid mixture of the choicest dwarf-growing Hardy Annuals, suitable for the above purposes, and which will make a very pretty display for a long period. The mixture includes:—Godetias, Clarkias, Candytusts, Mignonette, Popples, Gilias, Viscarias, and other free-flowering subjects, and will give the highest satisfaction.

MIXED FLOWER SEEDS, Choicest Dwarf Varieties, per lb. 5s.; per oz. 6d.

TUBEROUS-ROOTED BEGONIAS.

We have much pleasure in offering tubers of our grand strains of Tuberous-rooted Begonias. These have been grown and selected at our Nurseries during the past season, and for form, size, substance of flower, and beauty and variety of colouring are second to none-

DANIELS' DOUBLE-FLOWERED BEGONIAS (Dry Tubers).

The Double-flowered Begonias are especially recommended for pot culture. The colours of the flowers vary from the darkest crimson and scarlet, through all the most beautiful shades of salmon, rose, and yellow, to the purest white. They are easily grown, and with their large massive blooms form strikingly handsome objects for the greenhouse or conservatory.

DOUBLE BEGONIAS IN DISTINCT COLOURS FOR POTS OR BEDDING OUT.

Fine double flowers, earefully selected when in bloom, and first class for pot culture or the garden.

DARK REDS AND SCARLETS ROSE SHADES

PURE WHITE ORANGE AND SALMON SHADES

YELLOW SHADES RED SHADES

per 100, 30s. 5 0

DANIELS' SINGLE BEGONIAS FOR BEDDING.

IN DISTINCT COLOURS (Dry Tubers).

Distinct and beautiful colours, specially selected for effective bedding, all of the large-flowered creet growing class, and good strong tubers. Highly recommended.

DANIELS' BRILLIANT SCARLET DANIELS' SALMON ROSE SHADES DANIELS' PURE WHITE DANIELS' ORANGE SHADES

DANIELS' DARK RED AND CRIMSON DANIELS' YELLOW SHADES

CHOICE MIXED SEEDLINGS. In beautiful variety, all approved flowers from our fine collection

per 100, 15s.; per doz. 2s. 6d

SINGLE-FLOWERED BEGONIAS FOR POT CULTURE (Dry Tubers).

BEGONIAS-NEW FRINGED SINGLE.

A remarkably fine new strain of handsomely fringed flowers. The large finely-formed blooms, which are elegantly frilled and crested, are borne on stiff, erect stems, carried well above the fohage, and are possessed of the most beautiful variety of colouring known amongst Begonias. This splendid class will be found first-class for pot culture.

PURE WHITE, beautiful .. Dry Tubers, each ls.; per doz. 10s. 6d. VERY CHOICE MIXED, in fine variety ... each 6d.; per doz. 5s.

BEGONIA ERECTA CRISTATA.

A remarkable strain of great beauty. The plants are of a dwarf, sturdy, upright growth, and first-class for pot culturo. The petals are of great substance, and the flowers of the most charming colours, each petal carrying on its upper surface a handsome crest resembling a Cockscomb. Singularly beautiful, and quite unique.

VERY CHOICE MIXED, in beautiful variety

Dry Tubers, per doz. 5s.; cach 6d.

The prices quoted above are for dormant tubers, and these can only be supplied to the end of April.

In May and June we supply strong plants from single pots at the following rates:-

SINGLE-FLOWERED, choice mixed, per 100, 30s.; doz. 4s. 6d. DOUBLE-FLOWERED, ch

DOUBLE-FLOWERED, choice mixed, per 100, 42s.; doz. 6s.

GLADIOLI.

These beautiful flowers succeed well in almost any soil or situation, and planted in association with Dwarf or Standard Roses, with hardy herbaceous plants, or on the shrubbery border, they have a very fine appearance. They also do well as pot plants, and are capitally suited for growing in outside window boxes.

We would strongly recommend all who have not yet grown them to procure the new Giant-flowered hybrids, the varieties of Nanecianus and Lemoinei, all of which can be highly recommended for making a display of rare beauty in the garden. The hybrids of G. Gandavensis are also well known and very popular. Plant the corms or roots firmly, three or four inches deep and eight or nine inches apart, in clumps of three, five, or more as required, and put a neat stake to each when the flower buds make their appearance. March is the hest month to plant for blooming in July and August, and hy a few successive plantings in April and the early part of May, a succession of haudsome flowers may be had to the end of September. Gladioli are of especial value as cut flowers for decorativo purposes. If the flower spikes are cut and placed in water just as the blooms are beginning to expand, they will all open in succession to the topmost hud, and will retain their beauty for a longer time than if remaining on the plant.

NEW GIANT-FLOWERED HYBRIDS.

We strongly recommend the following varieties, which have proved highly satisfactory with us in our trials during the past season. The flowers are of great substance and gigantic size.

AMERICA. Great substance, colour soft flesh pink, slightly tinged with lavender. Each 3d.; per doz. 2s. 6d. CARDINAL. Intense searlet.

Each 6d.; per doz. 5s. *DAWN Shell pink, most pleasing. Each 8d.; per doz. 7s. 6d.

*EMPRESS OF INDIA. Very dark rich maroon. A.M.

Each 7d.; per doz. 6s. *GLORY OF HOLLAND. Splendid white. A.M. Each 7d.; per doz. 6s GOLDEN WEST. Orange red, overlaid with gold, blotched.

Each 8d.; per doz. 7s. 6d.

HALLEY. Lovely salmon pink, blotched yellow F.C.C.

Each 3d.; per doz. 2s. 6d

*HENRY GILMAN. Deep salmon searlet, white band.

Each 6d.; per doz. 5s. LILY LEHMAN. White, slightly edged with rose, very fine.

Each 7d.; per doz. 65. *NIAGARA. Canary yellow, very tall. A.M. Each 10d.; per doz. 9s.

PEACE. White, blotched with pale lilae. Each 10d.; per doż. 9s. *PRINCEPS. Enormous flowers of dazzling searlet, with a small white

vein; a most remarkable variety. Each 4d.; per doz. 3s. WHITE GIANT SEEDLINGS A splendid strain, varying slightly in shade,

very large blooms. Each 4d.; per doz. 3s. *WILLY WIGMAN. Enormous flowers, 6 to 8 iuches across, creamy white

with large crimson blotches. F.C.C. Each 6d.; per doz. 5s.

One of each of the above 14 Superb Varieties for 6s. 6d. * One each of Seven Varieties for 3s. 6d.

Splendid mixture of Giant-flowered Hybrids

per doz. 1s. 6d.; per 100 10s. 6d.

GLADIOLUS GANDAVENSIS HYBRIDS.

A very fine free flowering class, growing about three feet high and producing long, handsome spikes of lovely flowers, ranging in colour through all the shades of searlet and crimson, mauve, rose, pink and yellow to pure white.

GLADIOLUS LEMOINEI. Hardy Hybrid Gladioli.

This fine new race of Hybrid Gladioli blooms somewhat earlier than those of the Gandavensis section, and are much more hardy, so hardy in fact, that their bulbs do not need to he lifted in Winter. The flowers are very striking and handsome in appearance, all having conspicuous blotches on the lower petals, whilst the colours are very diversified and beautiful. These will be found splendid alike for garden decoration or for cut flowers.

BARON HULOT. A quite novel and very beautiful variety of the hardy Lemoinei class of Gladioli. The large flowers, which are produced on handsome spikes, are of a lovely rich dark violet blue. A colour quite unique amongst Gladioli and of striking effect.

Each 3d.; per doz. 2s. 6d. GELRIA STRAIN. A beautiful strain, containing mostly pale blue, yellow, aud hehotrope shades.

Per doz. 1s. 6d.; per 100, 10s. 6d.

LEMOINEI VARIETIES. Choice mixed, in beautiful variety. Per doz. 1s. 6d.; per 100, 10s. 6d.

GLADIOLUS BRENCHLEYENSIS.

A well-known and splendid variety of fine effect for massing; the flowers are of a rich hright searlet colour, and being produced in hand-some spikes are first-class to cut for church and other decorations.

Good flowering roots, per doz. 1s.; per 100, 7s. 6d. Extra fine roots, per doz. 1s. 6d.; per 100, 10s. 6d.

GLADIOLUS HOLLANDIA.

Equally as useful as Brenchleyensis for cut work. Flowers of a lovely rosy salmon.

Per doz. 1s. 6d.; per 100 10s. 6d.

GLADIOLUS NANCEIANUS.

A magnificent class of heautiful flowers, producing large, brilliantly coloured hlooms. Very Choice Mixed, in beautiful variety.

Per doz. 1s. 6d.; per 100, 10s. 6d.

LILIES (Lilium) for Spring Planting.

For growing Lilies in pots a compost of about equal parts of sandy loam, leaf mould, and peat, is, perhaps, the hest. however, he grown in almost any good light and rich soil, especially those of the Auratum type. For single specimens use pots of ahout six inches diameter. These will be found very useful for house decoration; but pots of eight or ten inches diameter, with five or six bulls in each, form grand objects for the conservatory when in bloom Pot firmly, any time during Spring, with the bulbs about two inches below the surface, and plungo the pots with their rims about six inches deep in some light material, such as ashes or cocoa nut fibre, in some sheltered position out of doors. Whon the stems have pushed their way well through the plunging material, they may be lifted and removed to a cool pit or frame till the flower-buds are developed, when they may be removed to the greenhouse or conservatory.

All the sorts mentioned in the following list are suitable for Spring planting out of doors. For pot culture, however, we strongly recommend the

beautiful varieties of Auratum and Speciosum, with the addition of the fine Longiflorum Giganteum as the most suitable.

LILIUM AURATUM.

each-	-5.	d.
BATEMANNIÆ, Apricot-yellow per doz. 10s. 6d.	1	0
BROWNI. Largo, creamy white trumpet-shaped flowers, the outside of the petals being of a rich purplish brown colour	2	6
CHALCEDONICUM (Scarlet Turk's Cap). Splendid old variety,		
flowers medium sized, reflexed, and of a deep rich searlet colour; finely effective per doz. 21s.	2	0
COLCHICUM (Szovitzianum). Pale yellow, spotted with hlack; finely

APPLES.

Our fine stock of Apples are principally worked on the Crab Stock, but we have a large collection of the most suitable kinds worked on the broad leaved Paradise Stock, the varieties we can supply of these being marked with an asterisk (*). The best time for planting is as early as convenient in October or November, after the young trees have shed their leaves, but planting may be done with safety any time to the end of March if the weather is fairly open.

Dwarf Apples on the Paradise Stock are of especial value both for large or small gardens, and have come very much into favour of late years. They are much dwarfer in growth, come into bearing and profit much sooner, are easier to thin and spray, and they produce almost continuously abundant crops of much finer fruit. For small holdings, or where the tenure is uncertain, they are specially recommended.

PRICES OF APPLES.

In all cases where customers leave the selection of varieties to us, they may rely on only good trees of the best kinds being supplied. It is most important, however, that the style or shape of trees required should be clearly stated when ordering. Orders entrusted to us in this way are invariably filled to the entire satisfaction of our clients.

When it is proposed to form new Orchards or to plant a quantity of Fruit Trees, for market purposes, we shall be most happy to quote special prices on our customers naming the varieties and styles they desire to have.

NEW AND VERY CHOICE APPLES.

Those marked (*) can be supplied on Paradise Stock. Those marked (†) can be supplied as Single Cordons.

ARD CAIRN RUSSET. This is an Irisb Apple, one of the best of the Russet family; a good bearer and long keeper, of delicious flavour.

Maidens, 1s. 6d. each; Bush, 3s. 6d. each.

BENS RED. A most valuable dessert Apple of a brilliant bronzy-red colour and of first-class flavour.* Maidens, 1s. 6d. each; Bush, 2s. 6d. each. ELLISON'S ORANGE (D). This is a delicious dessert Apple approaching closely in appearance and flavour to Cox's Orange Pippin, and possessing equally good keeping qualities. We have every confidence in recommending this variety.

Maidens, 1s. 6d, each; Two Year Trees, 2s. 6d, each.

*FELTHAM BEAUTY (new). A splendid new highly coloured early dessert variety, raised from Cox's Orange Pippin and Mr. Gladstone. The fruit is of fair size, flesh crisp, sweet, and of rich aromatic flavour; a first-class and profitable market variety.

One Year old Trees, 1s. 6d. each; Two Year old Trees, 2s. 6d. each, RED VICTORIA. This is not a red form of the popular "Early Victoria," but a very highly coloured early culinary variety; flesh white and juicy, a good cropper and free grower. We can very highly recommend this variety to our customers. Maidens, Is. 6d.; Bush, 2s. 6d.

RENOWN. A very fine variety of excellent habit, a regular and heavy cropper; the flesh is solid, crisp, juicy, and of pleasing flavour, and possessee every good point either for cooking or dessert purposes.

Maidens, 2s. cach; Bush, 3s. cach. REV. W. WILKS (K). A very large, culinary apple of fine form; the colour is a creamy yellow dotted with brown and searlet specks, flesh white and

juicy and of pleasant flavour; a good grower and free bearer. Maidens, 2s. each; Bush, 3s. each.

WM. CRUMP. A beautiful new dessert Apple, the fruit is of medium size, conical bright red on the exposed side, and heavily streaked with russet marking round the stalk, flesh erisp and of rich flavour. Maidens, 2s. each ; Bush, 3s. each.

From Mr. E. A. LANGFORD, Valentia Island.

Aug. 1st.
"The Fruit Trees you supplied me with a few years since are doing splendidly and giving fine crops; I am well satisfied with them."

From Mr. J. LINES. Warwick.

"Fruit Trees to hand safely. I thank you for your grand selection, and am more than pleased with them. Great praise is due for the excellent way in which they were packed."

From H. LANE, Esq., Lichfield.

March 1st.
"The Apple Trees arrived safely and in excellent condition, and I must say I am much pleased with the stuff you have sent.

From Mr. A. HURRELL, Meopham.

March 11th.
"I would like to say I am very pleased with the Apple Trees you have sent me."

APPLES—General List of Select Varieties.

D denotes dessert. K Kitchen. Those marked (*) can be supplied on Paradise Stock. Those marked (†) can be supplied as Single Cordons.

*ALFRISTON (K). A large and useful variety. Nov. to April.

†ALLINGTON PIPPIN. A splendid medium-sized Apple introduced a few years ago, and which has taken a position in the front rank as a firstrate dessert variety and a rehable bearer. Maidens, each 1s.; Dwarfs on Paradise Stock, 2s.; Pyramids, 3s. 6d.; Standards, 2s.

*ANNIE ELIZABETH (K). A very fine late Apple of excellent keeping qualities. Dee. to May.

*BARON WOLSELEY (K). An enormous fruit of the Warner King type, hut larger and with more colour, being flushed with bronzy rod. A good grower and free bearer. A splendid Exhibition Apple,
One Year Trees on Paradise, Is, 6d. each; Two Year Trees on
Paradise, 2s. each; Cordons, 2s. 6d. each; Standards, 3s. 6d. each,

†*BEAUTY OF BATH (D). A very handsome early variety, has a brisk
sub-acid flavour. July and Aug.

*BEAUTY OF KENT (K). A handsome, large, and first-rate culinary
Apple; excellent bearer. Oct. to Feb.

†*BISMARCK (K). One of the best varieties in cultivation for market or

†*BLENHEIM ORANGE (D.K.). Well-known and splendid variety; large handsome fruit. Dec. to Feb.

†*BRAMLEY'S SEEDLING (K). A large handsome fruit, resembling Blenheim Pippin. Sept. to Jan.

†*JAMES GRIEVE (D). Medium-sized fruit; flavour of "Orange Pippin."

ERRY PIPPIN (D). Small fruit, sweet, crisp, juicy, and richly flavoured; one of the best dessert Apples. Sept. and Oct. †*KERRY PIPPIN (D).

KESWICK CODLIN (K). One of the earliest and most useful of kitcher-Apples; very prolifie Aug. and Sept.

†*KING OF PIPPINS (D)

Fruit medium-sized; a richly flavoured and

excellent dessort variety; in season during Aug and Sept.

*LADY HENNIKER (K). Large, handsome fruit; a free bearer, and goodkeeper. Oct. to Feb.

*LADY SUDELEY (D). Large, yellow with crimson streaks; very fine Summer Apple. Sept

†*LANE'S PRINCE ALBERT (K). Large, handsome fruit; a great bearer, and one of the very best kitchen Apples. Oct. to March.

†*LORD DERBY (K). Large, handsome, heavy cropper; one of the best.

LORD GROSVENOR (K). A large and handsome culinary Apple. Sept.

†LORD SUFFIELD (K). A fine variety of the Keswick Codlin type. It is an early and prolific bearer, and one of the very best of early cooking Ang. and Sept.

MOTHER (D). Medium, a most deheious conical fruit, rich and aromatie; does admirably as a pyramid, and is good oven in the North. One of the best flavoured kinds with soft flesh.

†*MR. GLADSTONE (D). Medium, mottled red, yellow streaks; the earliest dessert, free-bearer; fine flavour. July and Aug.

†NEWTON WONDER (K). Large; a valuable new kind, between "Wellington" and "Blenheim"; a handsome fruit, keeping soundly,

†*NORFOLK BEAUTY (new) (K). A cross between "Warnor's King" and "Dr. Harvey." Fruit large, pale green changing to yellow. In appearance, intermediate between the two parents. Maideus, each 1s.;

Pyramids, 2s. 6d. and 3s. 6d.; Standards, each 2s.

†*NORWICH PIPPIN (D). A splendid variety resembling Cox's Orange but brighter in colonr. It is a splendid keeper and may be had in good condition up to April or May, whilst the flavour is excellent.

Maidens, each Is.; Pyramids, 2s. 6d. and 3s. 6d.; Standards, 2s.

*OLD NONPARELL (D). A richly flavoured and first-rate dessert Apple

of excellent keeping qualities. Jan. to May.

†*PEASGOOD'S NONSUCH (D.K). A large, handsome Apple of the Blenheim Orange type; excellent for dessert or kitchen. Sept. to Jan.

POTT'S SEEDLING (K). Large, angular, yellow; very heavy cropper. Aug. and Sept.

RED ASTRACHÂN (K.D). Large, brilliautly coloured; handsome. Aug. and Sept.

*REINETTE DU CANADA (D.K). A large and excellent Apple, suitable

for dessert or eulinary purposes. Nov. to April.

†*RIBSTON PIPPIN (D). Well-known splendid old sort, but tree rather subject to canker. Nov. to March.

*SCARLET NONPAREIL (D). A capital dessert Apple of first-rate quality;

in season from Jan. to March.

STONE'S APPLE (K) (syn. Loddington). A large and handsome kitchen Apple; an immense bearer. Sept. to Dec.
*STIRLING CASTLE (K). An early and free-bearing Apple; a great bearer,

and well suited for dwarf culture. Aug. and Sept.

THE HOUBELON (D). Similar to Cox's Orange Pippin, but higher colour,

*THE HOUSELON (D). Similar to Cox a Grange Tippin, but higher coton, and will keep much longer. Dec. to Feb.

*THE SANDRINGHAM (K). A fine large, and very handsome Apple of excellent quality. Feb. to May.

†*VICAR OF BEIGHTON (K). One of the handsomest, most prolific, and

best keeping Apples in cultivation. The fruit is large and roundish, and of a deep bright crimson colour, mottled and striped with yellow and green. Nov. to May.

*WARNER'S KING (K). A very large and splendid Apple of first-rate quality; the tree is a free and vigorous grower, a great bearer, and not subject to disease. Nov. to March.

†*WORCESTER PEARMAIN (K.D). Handsome early variety, suitable for kitchen or dessert; a great favourite in the market. Ang. and Sept. YORKSHIRE BEAUTY (K). Large; fine kitchen Apple. Aug. to Oct.

CRABS (Pyrus baccata).

The following varieties, which we consider by far the bost and most useful, are excellent for making preserves. They are also very protty as ornamental trees, the bright-coloured fruits hanging in abundance, as they generally do, for a long time in Autumn, being very handsome and effective

amongst other ornamental trees, shrubs, &c.

DARTMOUTH. Very handsome dark crimson fruit; an abundant bearer

JOHN DOWNIE. Bright crimson, conical fruit of good size and quality; very handsome ... Standards, each 2s.; Maidens, each 1s. 28. " 1s YELLOW SIBERIAN ,, RED SIBERIAN. Bright searlet fruit, round and resembling those of the Cherry ,, Is

. . . .

If desired we can supply "Acme" Labels for all Fruit Trees. For Prices see page 60.

From Mr. R. Blayleck, Derby.

April 23th.
"The 25 Cordon Apple Trees we had from you in December last have all grown and are doing well."

[From Mr. T. J. Luck, Gardener to H. Rumney, Esq., Sissinghurst, October 13th,
"We are very pleased with the Apple and Currant Trees we had from you in 1911, every one is alive, and doing well. We had a nice lot of fruit this year."

SELECT PEARS.

Pears should be much more freely grown than they are. The young trees come into bearing much earlier than is generally supposed, especially when worked on the Quince stock. Many of the varieties are exceedingly prolific, whilst the fruit are more valuable than Apples, choice sorts always finding a ready sale at good prices.

*WINTER NELIS. Fruit small but of most delicious flavour; quite hardy

and an excellent hearer Nov. to Feb.

SELECT PLUMS.

Although as a rule, Plums attain the greatest perfection when grown as wall fruit, most of the varieties will succeed admirably when grown as Pyramids or Standards. Dwarf trees should be lifted and root-pruned from time to time, if making too strong a growth, and the branches should be thinned out to admit air and induce the formation of fruit buds. For growing on walls the following are highly recommended:—Green Gage, Golden Gage, Coe's Golden Drop. For general purposes the following are amongst the very best :--Cox's Emperor, Early Prolific, Diamond, Jefferson's, Magnum Bonum, Victoria, Sultan, Pond's Seedling, The Czar, Grand Duke.

DWARFS OR MAIDENS each 1s. 0d.; per doz. 10s. 0d. ,, 3s. 6d; ,, 35s. 0d. ,, 1s. 9d.; ,, 17s. 6d. ition) cach 5s. 0d. DWARF TRAINED

General List.

Our selection, per 100, 24s. to 30s.; per doz. 3s. 6d., 4s. 6d.
We can supply Fan-trained Gooseherries from the above varieties

1s. 9d. each; 18s. per doz. Standards, 2s. 6d. each. Single Cordons, 1s. tid. each.

GOOSEBERRY, WHINHAM'S "INDUSTRY."

RASPBERRY, SUPERLATIVE.

RASPBERRIES.

Ground intended for these should be deeply trenched and heavily manured. The canes should be planted (not too deeply) about 2 feet apart and the rows should be 5 or 6 feet apart, and after planting, a mulching of well-decayed manure should be placed on the surface. Newly planted canes should be cut back to 2 feet to encourage the formation of suckers for the following season.

RED ANTWERP. WHITE ANTWERP. BAUMFORTH'S SEEDLING. A fine variety; fruit very large, of the most

beautiful erimson colour; an abundant bearer of good habit.

HORNET (Rivers.) A very fine Raspberry, fruit deliciously flavoured, and the most inject of any variety. and the most juicy of any variety. A splendid cropper, and will be largely grown when better known. First Class Certificate, Royal Iforticultural Society ... per 100, 15s.; per doz. 2s. 3d. LOWE'S PERPETUAL. This is a grand new Red variety of great size

and perpetual bearer, good flavour, will fruit from middle of June to September .. Strong Canes, per 100, 30s.; per doz. 5s.

NOVEMBER ABUNDANCE. A splendid Autumn bearing variety. The fruit, which is borne in large clusters, is large, of a deep red colour and of excellent flavour, while the canes are strong and vigorous

per 100, 15s.; per doz. 2s. 3d. PERFECTION. This is an absolutely new and distinct variety. It is an exceptionally strong grower and makes a better plant the first year than any other variety. It is a good cropper, producing fruit from base to top of cane of a bold size, firm, fine, aciduous flavour, and brilliant searlet colour, the high colour being retained even when the fruit is fully ripo

YELLOW SUPERLATIVE (new). The largest and strongest growing yellow variety, very largo fruit.

Strong fruiting Canes, per 100, 21s.; per doz. 3s.

BLACKBERRIES.

PARSLEY-LEAVED. Very ornamental ent-leaved variety, which bears .. per doz. 5s.; each 6d large fruit, good and productive WILSON JUNIOR. One of the finest and most prolifie in cultivation, producing very large, glossy black fruit of delicious flavour

STRAWBERRY PLANTS-Prepared Runners.

KING GEORGE V. This is a fine new early forcing and outdoor Strawberry. It is a really magnificent fruit, quite as large as Royal Sovereign, but ripens a week earlier.

Strong Plants from open ground, per 100, 30s.; per doz 5s

LAXTON'S MAINCROP—Fine New Maincrop Strawberry. The following is the raiser's description:—"Undoubtedly the largest and firmest Strawberry we have yet raised, a cross between Bedford Champion and The Laxton; a vigorous grower, throwing out very bold, large trusses in the greatest profusion. Undoubtedly the 'Maincrop' Strawberry of the future; good in all respects, both in colour, size, flavour, and vigour of plant."

Strong Plants from open ground, per 100, 30s.; per doz. 5s.

"PROFIT." This is a main crop fruit which we have confidence in recommending for size, firmness, flavour, and cropping. Strong open ground Plants, per 100, 16s.; per doz. 2s. 6d.

EATON GROVE FAVOURITE. This splendid variety ripens ten to fourteon days carlier than Royal Sovereign. The fruit is not quite so large, but is much sweeter in flavour. Wo can highly recommend Open ground Plants, per 100, 6s. 6d.; per doz. Is.

GEORGE MUNRO. A cross between Royal Sovereign and Sir Chas. Napier. Award of Merit, R.H.S. Per 100, 6s. 6d.; per doz. Is.

"THE EARL" (Laxton). Waterloo × Royal Sovereign. The Raisers say:—"This may be best described as a much-improved 'Vicountess H. de Thury.' In colour, shape and flavour it is almost identical; but it is larger in size of fruit, and more vigorous and free cropping in habit; the flavour is very similar to that well-known sort, being rich yet juicy, and it should make a useful preserving variety owing to its specific density.

Strong Plants from open ground, per 100, 30s.; per doz. 5s.

The following Varieties all at 5s. per 100; 9d. per doz. Not less than 50 supplied at the rate per 100.

BEDFORD CHAMPION. One of the largest fruits in commerce, often 21 to 3 ozs. in weight and 6 ins. circumference. Bright searlet skin, flesh white. BRITISH QUEEN. Well-known superb variety; the finest flavoured Strawberry in existence; requires good cultivation.

FILLBASKET. The colour is a good bright scarlet similar to Royal

Sovereign, the flesh is white and firm.

GIVON'S LATE PROLIFIC. A fine new variety raised from Waterloo and Latest of All. Large, wedge-shaped fruit of rich colour, and splendid flavour. Award of Merit, R.H.S.

LAXTON'S LATEST. A very late variety. The fruit is large, conical

wedge-shaped, deep crimson in colour and of fine flavour.

PRESIDENT. A great cropper, colour crimson, of superior flavour.
PROGRESS. A splendid variety of full rich flavour. Large flattish wedge-shaped fruit.

EEWARD. Very large, wedge-shaped fruit of most excellent quality, being of the richest "Queen" flavour.

ROYAL SOVEREIGN. This fine early variety possesses all the qualities required in a really good Strawberry. The best variety for pot

SENSATION. An enormous second early or mid-season variety of good flavour, and one of the largest Strawberries ever introduced.

SIR JOSEPH PAXTON. Hardy early variety.

"ST. ANTOINE DE PADOUE." Said to be by far the finest perpetual bearer yet raised. Superior to "St. Joseph."

THE CROPPER. A very prolific main crop variety of a rich crimson colour, the flesh is white and of the most luscious flavour.

THE LAXTON. A cross between Royal Sovereign and Sir Joseph Paxton. One of the finest and best early.

WATERLOO. Fruit large and of a fine dark erimson colour, almost black when ripe, a good grower.

GRAPE VINES.

The best time for the Spring planting of these, either on inside or outside borders, is in March or April, when the sap is beginning to flow and the buds show signs of bursting into leaf. Ground intended for growing Grapes should be carefully drained, if the soil is wet, and should be well broken up to a depth of two feet, and well mixed with some old well-rotted manure and rough loam, with the addition of some old lime rubbish, if procurable.

Our stock of Grape Vines for the present season is very fine. The canes have all been grown from eyes and are well-ripened, strong and healthy. The buds are thoroughly matured and plump.

The fruiting canes we offer are extra strong and stout, from eight to ten feet in length; and if cultivated in pots should bear from eight to twelve bunches each next season.

> II. denotes those varieties that require a heated vinery. C denotes those suitable for growing in a cool vinery.

BLACK ALICANTE (11). One of the largest and handsomest grapes in cultivation. The fruit is of oval form and carries a fine bloom. It is of excellent flavour and very prolific. Its flavour is at the best when allowed to hang till Christmas.

BLACK HAMBURGH (C). Berries large, round, sweet and jnicy. Large broadly shouldered bunches. A well-known most excellent variety and probably the most popular in cultivation. The best for general use.

BUCKLAND'S SWEET WATER (C). Large bunches and berries of amber colour. An excellent variety for a cool vinery.

FOSTER'S SEEDLING (C). Pale amber, an excellent variety.

GROS GOLMAR (H). Bunches and berries vary large. Dayle purple with beautiful bloom in the large transfer of the first transfer of the control of the property of the control of the control

GROS COLMAR (H). Bunches and berries very large. Dark purple with beautiful bloom. A very handsome and deservedly popular variety.

GROS MAROC (H). An exceedingly handsome large-fruited grape of delicious flavour and one that ripens early.

LADY DOWNE'S SEEDLING (H). Large black berries of good flavour. This is a splendid keeper and will hang till March.

MADRESFIELD COURT MUSCAT (H). Long bunches and large black berries of delicious Muscat flavour, will hang for a long time without shrivelling.

MUSCAT OF ALEXANDRIA (H). Long and large bunches of large red amber-coloure popular of all the "Museats."

ROYAL MUSCADINE. A fine hardy white grape that will succeed well on a south wall Long and large bunches of large red amber-coloured berries of the most delicious Museat flavour. The most

PHENOMENAL BERRY.

(Novelty.)

A further cross between the Logan Berry and the Raspberry, the shape and colour of the Logan Berry, with the flavour of a Raspberry. Without the hard cove of the Logan Berry, and will be a most suitable fruit of the future for dessert or preserving, which will ripen before the "Lowberry." This is a very strong grower and should be planted in the same way as the Logau Berry. In pots, 1s. 6d. each. From open ground, Is. cach.

LOGAN BERRY.

This fine American fruit has proved a decided acquisition and is now being extensively grown for market purposes. Grown in the same way as Raspberries it fruits freely and will often succeed where those fail. It is of very strong growth and makes a capital plant for poles or pillars; it also makes an excellent fence, and is very useful for pergolas. Plant 6 or 8 feet apart.

STRONG PLANTS from layers, the true variety each 9d.; per doz. 7s. 6d.

THE LOWBERRY.

A very fine new variety of the Logan Berry, producing an abundance of handsome black fruit without core, and of delicious flavour. In pots, 1s. 6d. each.

THE HIMALAYA BERRY.

A new berry from California, said to have been found growing on the mountains. It is a very strong grower, plants at our Nurseries have made a growth of 15 feet; the plants have fruited well, producing large clusters of beautiful black berries, said to be free fruiting.

Strong plants, 1s. 6d. each.

OUR GUINEA COLLECTION OF CHOICE FRUITS.

We have much pleasure in offering the following liberal Collection of Fruits, which will be found admirably suited to the requirements of a small garden, or where the space for fruit growing is limited. The fruit Trees will in all instances be Dwarfs, and only good varieties will be sent, but the selection of sorts must be left to us. We make no charge for packages, but in consequence of the extreme cheapness of this Collection, we cannot pay carriage, and must ask that all orders be accompanied by a remittance.

OUR GUINEA COLLECTION OF FRUITS CONTAINS.

6 APPLES. Best sorts for succession.

PEARS. In good variety.

4 PLUMS. Most useful sorts.

2 CHERRIES. Two varieties. 12 GOOSEBERRIES. In variety.

12 RASPBERRIES. Best sorts. 50 STRAWBERRIES. In four sorts. 18 CURRANTS. Red, Black, and White.

We supply half the above Collection for Ils. 6d.

BRITISH QUEEN (H.T.). The finest pure white Hybrid Tea Rose in existence, surpassing in purity and elegance of form "Fran K. Druschki"; very free, opening well in all weathers. Bush, each 3s. CARINE (H.T.). Colour orange-carmine, suffused buff; a good addition Standards, each 2s, 6d, ; Bush, each 2s, to this class CLAUDIUS (II.T.). Colour bright glowing rose, of uniform shade throughout, strong and sturdy growth, flowers carried erect on stout stems; sweetly scented Standards, each 2s. 6d.; Bush, each 2s.

Sweetly scented

CORONATION (Wichmriana).

with small white streaks.

EARL OF GOSFORD (H.T.).

colour dark crimson, heavily shaded, after the style of "Victor Hngo," Bush, each 3s. 6d. very free and perpetual ...

GEORGE DICKSON (H.T.). Strong, vigorous, upright growth; flowers large, perfect in shape and unique in colour, which is a velvety black crimson, the back of the petals being heavily veined with pure erimson maroon. Bush, each 3s,

DUCHESS OF WESTMINSTER (H.T.). First-class exhibition variety: colour mad,-pink, fine Standards, each 2s. 6d.; Bush, each 2s.

KING GEORGE V. (H.T.). A rich blackish crimson Hybrid Tea Rose; the flower is very large and full, beautifully shaped; it keeps its colour in the hottest sun and does not turn blue as so many of our dark roses do. The perfume is very strong and pleasing. Bush, each 3s. 6d.

LOUISE CATHERINE BRESLAU (Rose Peruetiana). A very vigorous grower. Large oval-shaped bud of coral red tint shaded with chrome yellow; flower very large, full and globular; superb colouring, shrimp pink shaded with reddish coppery orange and chrome yellow on the reverse of petals

Standards, each 3s. 6d.; Bush, each 2s. 6d. reverse of petals

MADAME CHARLES LUTAUD (H.T.), Reddish green brouzed foliage, fine long bud of a nice ocline carmined tint and carried on long flower stalks. Very large flower, full and globular, colour middle chrome yellow slightly blended with bright rosy scarlet on the outer petals.

Bush, each 2s.

Choice New Roses H. P. & H. T. Roses (continued.)

MADAME EDMOND ROSTAND (H.T.). Vigorous grower; deep green bronzed foliage, fine long and elegant bud opening to very large flower, quite full and globular, with large outcircling petals; colour pale flesh shaded with salmon and reddish orange yellow in the centre

MADAME EDOUARD HERRIOT (Daily Mail Rose). A very vigorous grower, quito hardy, of spreading branching habit with many long thorns, green bronzed foliage; coral red bud shaded with yellow on the base; flower of medium size semi-double, superb colouring coral red shaded with yellow and bright rosy scarlet passing to prawn red. Strong plants, each 15s.; smaller plants, each 6s. 6d. Bushes only.

MRS. AMY HAMMOND (H.T.). This is perhaps best described as a highly improved Madame A. Chatenay, It is a better grower, a freer bloomer, its flowers are longer and more pointed, the colour a blend of amber Bush, each 2s.

MRS. SAM ROSS (H.T.). A pale, straw-coloured Hybrid Tea of immenso size and great refinement. The flowers are carried on stiff erect foot-stalks and last a very long time in good condition. Bush, each 3s. MRS. E. ALFORD (H.T.). After the style of "Mad. A. Chatenay," but of

a more soft pink colour; the flowers are large, full, and of excellent form, each petal being gracefully reflexed. Bush, each 3s. 6d.

MRS. CHAS. E. RUSSELL (11.T.). This rose is the nearest approaching yet
to a continuous blooming Hybrid Perpetual; it has vigour, large
foliage, productive, and all the flowers are good. Colour rose-carmine,

with centre of rose-scarlet, fragrant, a large flower of good form, an Bush, each 3s. 6d. exhibition as well as a forcing rose.

MRS. RICHARD DRAPER (II.T.). Colour bright rosy satin-pink on the outside of the petals, inside very pale silvery flesh, which shows a delightful contrast as the flowers expand; sweetly perfumed. A magnificent exhibition rose, and one of the most perpetual blooming of garden roses. Gold Medal of N.R.S., 1911 . . Bush, each 3s. OPHELIA (H.T.). Salmon-flesh shaded with rose, large and of perfect

shape, standing up well on long stiff stems; growth vigorous, very free flowering. A fine decorative variety.

Bush, each 2s. 6d. free flowering. A fine decorative variety.

RICORDO DI GIOSUE CARDUCCI. Rosy white, tinted and edged bright rose, reverse of petals deeper, very large, very double, long bud, opening well; very vigorous ... Standards, each 3s.: Bush, each 2s. ing well; very vigorous

SUNBURST (H.T.). Fine long pointed bud, generally borne singly on long stout stems; flowers large, fairly full and of nice clongated cupped form; the colouring is a superb cadmium yellow with orange yellow .. Standards, each 3s.; Bush, ground plants, 2s.

SYLVIA (H. Wich.). Buds pale and lemon-yellow, changing when opening to pure white, double, produced in elegant sprays Summer and In pots, 3s. 6d. each; Bush, each Is, 6d,

WILLOWMERE (Rosa Pernetiana). A very vigorous grower of creet branching habit with few thorns, light green foliage, long carmined coral red bud carried on long stout flower stalks, very large flower, full and of elongated shape, colouring of a rich shrimp pink-shaded yellow in the centre and toning to carmine pink towards the edges of This superb novelty was greatly admired at the Royal International Horticultural Exhibition, London. last year; Bush, each 4s.

STANDARD WEEPING ROSES.

The varieties named below can be supplied on tall Standards. These are the very best and most suitable varieties for this purpose. All who have seen these charming subjects will at once acclaim their worth.

AMERICAN PILLAR BLUSH RAMBLER CRIMSON RAMBLER EXCELSA GOLDFINCH

HIAWATHA LADY GAY LADY GODIVA LONGWORTH RAMBLER MINNEHAHA MRS. F. W. FLIGHT PARADISE TAUSENDSCHON TRIER WH. DOROTHY PERKINS

4 to 5 feet stems, 3s. 6d. each. 5 to 6 feet stems, 5s. each.

A few sorts can be supplied on 8 to 10 feet stems. Prices and varieties on application.

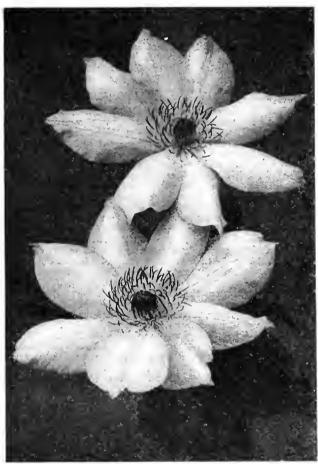

Wire Frames for Weeping Roses, 2 feet in diameter, 3s. 6d. each.

Acme Labels can be supplied for all rose trees — See page 60.

CLEMATISES.

These magnificent hardy climbers are highly popular amongst amateur growers, and, considering their great beauty, freedome of blooming, and the facility with which they may be trained on any kind of wall, trellis, verandah, or pillar, and in almost any aspect, it is surprising that Clematises are not found in abundance in every garden. The plants we offer are established impots, and can be removed at any time of the year. The sorts blooming after June are the best for bedding purposes; they flower on the young wood, and therefore require, before growth commences in Spring, to be cut down to within six or twelve inches of the ground, as likewise do all the late-flowering kinds; and early sorts, flowering from May to July on the old wood, should be pruned similarly to Roses. When the selection of sorts is left to ourselves customers may rely on our sending a really good variety.

A richly manured soil is indispensable if the best result is aimed at. Manure ought to be well mixed with the soil when planting, and used annually as a mulch for Winter protection, forking it in very lightly in the Spring. The addition of chalk or lime to the soil when planting is also beneficial.

CLEMATISES. From a Photograph. Unc-third in site.

HARDY ORNAMENTAL TREES AND SHRUBS.

HOW OF SPECIMEN MOPHEADED ACACIA GROWING IN OUR NURSERIES.

This class includes the loveliest and most charming trees for the garden. pleasure grounds, shrubberies and park. Many of them are remarkable for their graceful form and flowers, and for the highly ornamental effect produced by their delightful tints. We take great pains to ensure the trees being of the best possible quality. Coroful attention is also given quality. Careful attention is also given to pruning and staking, and our stock is regularly transplanted to ensure their safe removal. There is scarcely any spot, even under the greatest natural disadvantages, which cannot be made to look bright by the judicious planting of Ornamental Trees.

This list is not by any means exhaustive of our stock, and we shall welcome inquiries for anything not included herewith.

A separate list of Rhododendrons and Azaleas will be found on page 137, and of Coniferæ on page 138. These classes can be usefully employed in ornamental borders, either alone or mixed with other shrubs and trees.

We are continually engaged in carrying out alterations to gardens and pleasure grounds, and shall be most happy to advise as to the best manner to treat any proposed alterations, or to prepare plans and designs for new gardens.

NEW AND RARE ORNAMENTAL TREES AND SHRUBS.

APPLE (Weeping). A fine fruit bearing variety, | CYTISUS ANDREANUS PROSTRATA. A very and good flavour. Standards only, 5/- cach. BAY (Sweet Golden). Fine golden variety.

Height 11 ft. 1/6 cach. BUDDLEA VARIABILIS MAGNIFICA. A deep shade of rosy purple, the best of its class, 1/6

CATALPA SYRINGAFOLIA AUREA. Ornamental tree, golden leaves, 3/6 and 5/-

VIBURNUM PLICATUM

RHODODENDRONS.

RHODODENDRON, PINK PEARL.

The cultivation of these beautiful hardy evergreen flowering shrubs has been greatly on the increase since the discovery that peat soil is not absolutely necessary for their successful growth Sandy peat suits them best, but they do well in sandy loam or even clayey loam, if free from calcareous matter, whist we have seen beautiful specimens growing in ordinary light garden soil. The colours of flowers range from most intense crimson to the most delicate shades of rose and pure white.

NIGRA. Stems glossy black after the first-

year 3/6 and 5/- each.

CONIFERÆ.

In the following list we have aimed at offering only the most popular and useful kinds. They are most striking objects either planted singly, or in groups, and if rightly placed amongst deciduous and ornamental trees the effect is very pleasing.

All have been recently transplanted so as to ensure as far as possible safety in removal, abundance of room and attention have been given so that each tree may be a perfect specimen. Our trees are all hand pruned with a knife, which is a most important point. We offer well shaped plants, suitable for potting or window boxes, in good variety, our selection.

THUJA LOBBII. A very hardy, ernamental shrub, suitable for any position. Height $2\frac{1}{2}-3$ ft. 1/e each 10/6 per doz., 3—4 ft. 1/6 each 15/- per doz.

" VERVAENEANA. Beautiful gollen tinted variety. Height 2-3 ft. 1/6 each.

TRANSPLANTED FOREST TREES, HEDGING AND UNDERWOOD PLANTS FOR GAME COVERTS.

To meet the demand for Forest Trees we have considerably increased our Stock in this direction, and it will be found to comprise all the best varieties for Forest and Estate planting; further, we make it a practice to grow our trees thinly in wide rows, which ensures their being thoroughly hardened when moved to exposed situations. We shall be pleased to give estimates, free of cost, for all kinds of planting, Forest or otherwise, and will carry out the entire work if desired.

Our prices, taking quality into consideration, are exceedingly moderate, and we are prepared to compete with any respectable firms in the trade. Extra Selected Plants, and smaller quantities than quoted, will be charged proportionally higher.

We shall be pleased to submit samples of any Forest Trees, Carriage Free.

ACACIA, Common. See also page 134.

Very ornamental tree, growing freely on poor sandy soil. Height 2—2½ ft. 5/- per 100 45/- per 1000. Specimen Trees, 1/-, 1/6, and 2/- cach.

ALDER, Common. Grows well on wet, nndrained soils. Height 2—3 ft. 4/6 per 100 40/- per 1000, 3—4 ft. 6/- per 100 50/- per 1000. Specimen Trees, 1/-, 1/6, and 2/6

ARBOR-VITÆ (Thuya Occidentalis), Very compact and hardy, Height 1½—2 ft. 25/- per 100, 2—3 ft. 35/- per 100, 3—4 ft. 9/per doz.

ASH, Common. See also page 134.

Requires good land: timber very valuable when well grown. Height 2—3 ft. 4/- per 100 35/- per 1000, 3—4 ft. 6/- per 100 50/- per 1000, 4—6 ft. 7/- per 100 65/- per 1000, 10-12 ft. 1/6 and 2/6 each.

" MOUNTAIN. Very ornamental tree, most valuable for exposed situations; fruit valued by many for making preserves for cating with game. Height 4—5 ft. 10/- per 100 90/- per 1000, 6—8 ft. 12'- per doz. Specimen Trees, 1/6 and 2/6 each.

BEECH, Common. Makes a splendid hedge. Height 1½—2 ft. 7/- per 100 60/- per 1000, 2—3 ft. 10/- per 100 80/- per 1000.

THORNS or QUICKS. This is the best of all plants for an efficient hedge. Height $1-1\frac{1}{2}$ ft. 3/- per 100 25/- per 1000, $1\frac{1}{2}-2$ ft. 4/- per 100 30/- per 1000, $2-2\frac{1}{2}$ ft. 6/- per 100, extra

willow, BAT (Salix alba cœrulea). selected standards, 8-10 ft. per doz. 12/- per 100 80/-. Strong two-year old plants, 5-6 ft. per doz. 9/- per 100 60/-. Strong one-year old, well rooted, per 100 25/-. Un-rooted sets, 3—5 ft. 17/6 per 100.

" BITTER OSIER. Splendid for covers, not liable to be destroyed by Rabbits. Height 3-4 ft. 4/6 per 100 40/- per 1000.

HUNTINGDON. Makes valuable timber, ornamental, and of rapid growth. Heights

3-4 ft. 6/6 per 100.
YELLOW OSIER. Very ornamental when planted near water. Height 3-4 ft. 4/6per 100.

WHIN, GORSE, or FURZE. Seedlings, 3/- per 100 20/- per 1000. Transplanted, 4/- per 100 30/- per 1000.

YEW, Common. This is the most Ornamental of all evergreen hedges, it should not be planted in any situation accessible to animals that might eat it. It is hardy and a compact grower. Height 1—1½ ft. 5/- per doz. 30/- per 100, 1½—2 ft. 7/6 per doz. 50/- per 100, 2—2½ ft. 10/6 per doz. 80/- per 100.

MYROBELLA

or CHERRY PLUM.

This is the quickest growing hedge plant and largely used in England, Extra fine .. well rooted, 6'6 per 100, 60/- per 1000. Second size, 5/6 per 100, 50/- per 1000. Very scarce.

The best time for planting is in November or carly Spring, or it may be done in open weather at any time during the Winter months, but in fairly moist weather successful plantings may be made as late as the middle or end of April. In planting plant firmly, placing the sets from six to nine inches apart, according to size. When growth commences, they should be out down to eight or ten inches in height. It should be cut at least twice a year-about the end of July and. in Spring whilst in a dormant state.

ANEMONES—Single and Double-flowered.

ANEMONE ST. BRIGID.

ANEMONE, St. Brigid.

A brilliant and vory heautiful class of large semi-double flowers of the most striking and charming shades of colour, ranging from crimson and scarlet to rose, lilac, dark hlue, &c., to the purest white. Noarly all the blooms have conspicuous white centres, which add greatly to their beauty. They are first class for cut flowers, and if cut when the bloom is beginning to open and the stems placed in water, they will retain their beauty for a long time. Very Choice Mixed. In heautiful variety

per 1000, 45s.; per 100, 5s.; per doz. 9d.

NEW PINK SPIRÆAS.

These grand varieties are suitable alike for forcing or planting in the open ground, when planted outside the colours will be much deoper.

QUEEN ALEXANDRA. Bright pink per doz. 15s.; each 1s. 6d. PEACH BLOSSOM. Palo pink .. ,, 15s.; ,, 1s. 6d. These made quite a sensation when exhibited at Holland House, and were awarded the Gold Medal of the Royal Horticultural Society.

ANEMONES. SUPERB DOUBLE-FLOWERED.

EREMURUS HIMALAICUS.

A magnificent hardy plant, throwing up stately spikes of white campanulate flowers 6 or 8 feet high. Splendidly effective when planted in groups each 3s. 6d., 5s., and 7s. 6d.

HYACINTHUS CANDICANS.

A splendid hardy bulbous rooted plant, blooming in August, and throwing up fine spikes of white bell-shaped flowers three to four feet high. It makes a capital plant for pots in the greenhouse, and is finely effective when planted out of doors in association with Gladiolus Brenchleyonsis, which blooms at the same time. Fine Bulbs, per 100, 5s. 6d.; per doz. 10d.

MISCELLANEOUS BULBS, ROOTS, &c. LILY OF THE VALLEY.

MONTBRETIAS GERMANIA.

For early forcing, single crowns of these should be planted about twelve in a five-inch pot, with the buds well above the surface. Cover the crowns with a little moss or an inverted flower-pot and place them in a good heat of say 85 to 90 degrees; water frequently with tepid water, and if judiciously looked after they will bloom in four or five weeks from time of potting. Good single crowns are much the best for this purpose.

SELECTED SINGLE CROWNS FOR FORCING

per 1000, 50s.; per 100, 6s.; per doz. 1s.

LILY OF THE VALLEY. Fortin's Giant-flowered.

A very fine variety with remarkably large handsome bells on long stardy stalks. It is not so early and does not force so well as the ordinary variety, but will bloom splendidly out of doors in a sheltered position. Quite hardy.

LARGE-FLOWERED CANNAS.

These magnificent plants with their beautiful spikes of brilliantly coloured Gladiolus-like flowers and handsome foliage, have become highly popular for bedding out on lawns, &c., and for greenhouse and conservatory decoration. They are as easily grown as most bedding plants, and are grandly effective in groups or centres of beds. Break up the ground and manure as for Dahhas, and plant out in May as soon as danger from frost is over. They will soon start into growth and bloom, and if mulched with short well-rotted manure and well watered should the weather be dry, they will give a splendid show of beautiful flowers till killed by the frost in Autumn. In October or November they may be taken up, and after a short period of rest, divided and potted, when they will again start into growth and bloom in the greenhouse; or the rocts may be kept dormant till Spring, when they should be divided and potted up for turning out again in May. If grown for their beautiful foliage alone they are well worth growing, and with additional charm of their gorgeous spikes of beautiful flowers they cannot be too highly recommended.

DAHLIAS, POT ROOTS (Dry Tubers).

We offer as below, dry tubers from our splendid collection of choice named Dahlias, which includes the finest varieties in commerce. Considering the low prices at which these are quoted, it must be distinctly understood that the selection of varieties must, in all instances, be left to ourselves.

TUBEROSES.

These deliciously fragrant and exceedingly useful flowers are much more easily grown than is generally supposed, and will well ropay the little trouble that is necessary to have them in perfection. For early forcing pot singly into five or six-inch pots, as early in the seasou as the bulbs can be obtained, and plunge in a good moist heat, withholding water till the foliage makes its appearance, when water may be given abundantly till the flower-buds are formed, when they may be removed to the greenhouse or conservatory and less water given. For Autumu blooming pot singly into five or six-inch pots in March or April, using a light rich compost, and plunge the pots about six inches above their rims in eccea-nut fibre, coal ashes, or any light material, under the stage of a greenhouse or in a cool pit or frame; when the foliage of these makes its appearance they should be removed and plunged under a south wall, removing them to the greenhouse or indoors as the flower buds are formed. Dry roots may also be planted in sheltered places in the open ground, from the middle of April to the latter part of May, and will produce beautiful flowers in Autumn if takeu up and potted when coming into flower, and will furnish a supply of beautiful bloom in the greenhouse almost up to Christmas.

DOUBLE, "AMERICAN PEARL." Fine new dwarf variety from the United States; deliciously fragrant, with large double flowers, pure white.

Selected roots, per 100, 12s. 6d.; per doz. 2s. 0d.; each 3d

DAHLIAS—Cactus-flowered. NEW AND SELECT VARIETIES.

The following varieties, which are all of the true Cactus type, include what we consider the very choicest flowers for exhibition or decorative purposes, and cannot fail to give the highest satisfaction.

Strong Plants from single pots ready in May.

ARGONAUT. Orange-searlet with lighter centre, very fine and of stiffine distinct for the color of the first orange searlet with lighter centre, changing to clear pilks, shike no older petals becomes deeper. Nov. 17th.
"I received the Chrysanthemum; all right, and in splendid condition. I must congratulate you on the excellent packing."

From Mr. W. P. WILLIAMS, Banger,

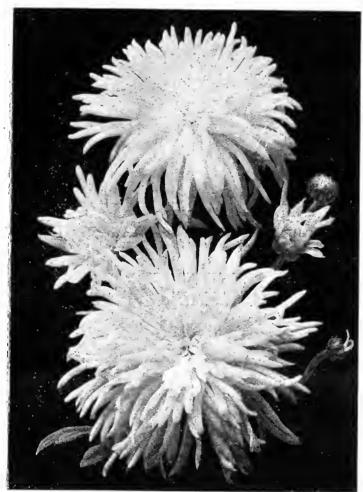

I'ch, 8th.
"I am very gliel to say that the Chrysanthemums I had from you are in large flowers now. I will send for some more later on."

CHRYSANTHEMUMS.

EARLY-FLOWERING LARGE-FLOWERED VARIETIES.

A splendid class for Garden Decoration.

This beautiful class commence to bloom about the end of August or carly in September, and continue till killed by the frost. They are easily grown and not only produce a fine display in the garden, but are exceedingly useful for cut flowers. For growing fine plants, plant out in May 18 inches or 2 feet apart on well-dug fairly rich soil, and place a good stick to each plant. Stop the shoots once or twice to induce a bushy growth, but do not stop them after the end of June. Water should be given freely in very dry weather.

CHRYSANTHEMUM-ROI DES BLANCS

ALMIRANTE. Red with scarlet shading, a very taking colour; free bloomer, 3 ft. F.C.C., N.C.S.

HARDY PERENNIAL FLOWERING PLANTS.

A PORTION OF AN HERBACEOUS BORDER AT OUR NURSERIES.

We have a fine collection of these: popular, interesting, and beautiful plants. which are daily coming more and more: into favour with the Gardening Public. All the varieties are perennial, extremely hardy, and many of them produce flowers. of the most exquisite beauty, which arevery valuable for cutting, whilst the dwarfer-growing sorts are admirably suited for rockeries or edgings. Nospecial soil or position is necessary, aswith but very few exceptions, they will thrive almost anywhere, and with a good collection, a charming variety and succession of bloom may be had throughout the Spring and Summer. The plants we offer are all grown in pots, and may be removed at any time or season.

Of many of the more popular border plants such as Pyrethrums, Delphiniums, Asters, etc., we are able to supply extra sized clumps from the open ground, and we shall be glad to send a list of these to anyone wanting to obtain immediate

NYMPHÆA ALBIDA.

HARDY WATER LILIES.

Foremost among the best Aquaties are Nymphæas or Water Lilies, of which there are a number of new varieties of great merit, which are wonderfully free flowering, producing flowers of almost every shade—white, cream, yellow, rose and red—and blooming from May to October. They are quite hardy, and can be successfully grown in tubs sunk in the ground. They may be planted from March to June, and should be planted in shallow baskets in rich loam to give them a start, and sunk overhead in water. A fast-running stream is not satisfactory for them.

VIOLETS—(SWEET-SCENTED).

The plants we offer are strong, well-rooted, and with good flowering crowns. If planted out in May, when flowering is over, in good soil on a shady border, they will make fine elimps for lifting in Autumn, for blooming under glass.

This most important department of our business receives our very careful attention, and the designs we supply may be relied upon as being exceedingly artistic and in the prevailing fashion. To ensure all blooms being freshly gathered, we cultivate large quantities of Flowers especially for this work, and they will consequently travel well, and arrive at their destination in splendid condition.

All designs are most carefully packed in special cases, and our system is such that they will stand a journey of twenty-four hours, if necessary, and arrive quite fresh. It is much the best plan to keep the boxes closed and in a dark cool place until needed, so as to hold the moisture about the flowers, and thus retain their freshness for a longer period.

MEMORIAL WREATHS, CROSSES,

These are most beautiful and artistic in appearance, being made up of freshly cut flowers. They are composed either white flowers, or with violets and other coloured blooms, according to the wishes of our customers.

We are continually asked to make up special designs and emblems for Masonic and other funerals, and we shall be most happy to be entrusted with instructions for these special occasions.

Each 5/-; 7/6; 10/6; 12/6; 15/-; 21/-; 31/6; 42/-, and upwards.

WEDDING AND OTHER BOUQUETS.

All orders for Bouquets are made up with the choicest flowers in season, and the important details of artistic arrangement and blending of colours receive most scrupulous attention; we are glad to say we invariably give the highest satisfaction. It is most important that instructions should be given at the time of ordering, as to whether "Shower" or hand

bouquets are desired, also the colours of the dresses which the flowers used in the Bridesmuids' Bouquets are to match.

BRIDES', PURE WHITE FLOWERS. Either with or without "Showers." Each 7/6 to 42/-.

BRIDESMAIDS', WHITE OR DELICATELY TINTED FLOWERS. Each 5/-; 7/6; 10/6; and upwards.

PRESENTATION BOUQUETS FOR BAZAARS, FETES, ETC. Each 7/6; 10/6; 21/-; and upwards.

GENTLEMEN'S BUTTONHOLES. White or coloured flowers. Each 6d, and 1s.; per doz. 5s. and 10s. LADIES' SPRAYS. Beautifully made up to order, any colour. Each 1s. 6d. and 2s. 6d.

LOOSE CUT FLOWERS AND FERN. For Wedding, Altar Vases, and other decorations in liberal quantity in boxes. Each 2/6; 3/6; 5/-; 7/6; 10/6; 15/-; 21/-; 31/6, and 42/-.

IMPORTANT.

All orders are despatched promptly on receipt, if required, but customers should, if possible, give at least two days' clear notice before the flowers are required, also full particulars for forwarding. Orders from unknown Correspondents must be accompanied by remittance. We would suggest that orders for Wreaths, &c., should be marked URGENT on the Envelope.

Flower Seed in Alphabetical Order, see pages 75-108.

TO GENTLEMEN REQUIRING GARDENERS, &c.

We keep a register of Gardeners seeking situations, and have almost always on our list the names of some first-class men requiring situations as head or under Gardeners, Farm Bailiffs, &c. We shall be happy to hear from any of our customers requiring such, and will at once put them in communication with men we consider suitable. We are always most careful to recommend only men of excellent character and good experience. We make no charge either to Customer or Gardener.
